Things to consider

2. Changing role of the delivery of AI to users

Beside

Add Copilots to be a helper to your application

Inside

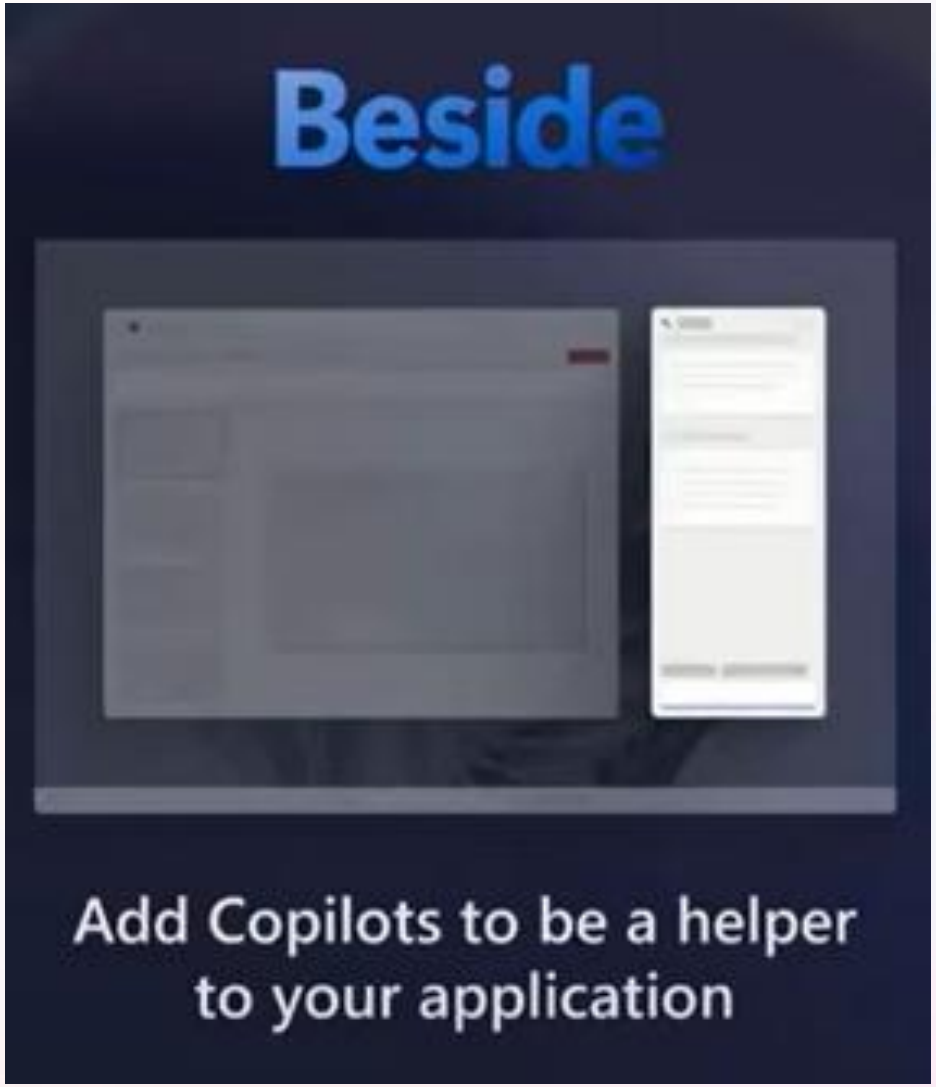

Create applications with AI at the center of the experience

Outside

Agents help orchestrate across apps and tasks

- Keeps original application architecture
- Keeps customer familiarity with application

- New interaction model
- More automatic
- Less explicit
- More implicit

- AI becomes the orchestrator
- Becomes more like an agent
- Tailored to suit the individual
- Works across applications, devices, time, etc

At the end of day

It’s a tool

Putting both tools to work for you

Copilot

Deployment

Adoption & Change Management

Extensibility

Practice development resources aka.ms/AIFutureOfWorkPartner

Understand the partner services opportunity

Partner opportunities

AI + Copilot Advisory

- Lead business transformation conversations.
- Provide guidance for the responsible use of AI.
- Identify personas and scenarios that would deliver the most value if reimagined with AI.

Readiness Assessment

- Assess licensing and technical readiness.
- Assess customer data protection and governance.
- Showcase the benefits of Copilot.
- Identify high-value scenarios.

Deployment

- Close readiness gaps.
- Assign licenses and configure with Setup Guide.
- Address optimization opportunities:
  - Remediate overprivileged and risky users.
  - Mitigate device risk.
  - Prevent over-exposure of data.

Adoption & Change Management

- Build and execute an adoption plan that includes:
  - Creation of a Copilot Center of Excellence.
  - Awareness strategy.
  - Learning plan.
  - Success measures and reporting.
- Deliver extended training and adoption support.

Extensibility

- Conduct line-of-business app assessments.
- Extend value with Copilot plugins and connectors.
- Connect data to Microsoft Graph and Dataverse.
- Deliver integration, customization, and configuration services.
- Build unique experiences with Copilot Studio.

Actions and investments in the customer journey

Sales Journey	Listen and Consult	Inspire and Design	Empower and Achieve	Realize Value	Manage and Optimize
Partner Services	AI + Copilot Advisory	Readiness Assessment	Deployment	Adoption & Change Management	Extensibility
Action and Investment	Leverage pitch decks, demos and other content at aka.ms/AIFutureOfWorkPartner	Deliver the Copilot for Microsoft 365 Optimization Assessment and Copilot for Microsoft 365 Pre-Sales Workshop	Share the Copilot for Microsoft 365 Onboarding Kit	Leverage the Copilot for Microsoft 365 Adoption materials and Deliver Adoption Accelerator workshop engagement	Deliver Microsoft Copilot Studio content and use the Copilot for Microsoft 365 Adoption guidance

Accelerate customer AI readiness before deploying Copilot

Proactively get customers ready to embrace the AI-powered future of work:

1. Move customers to **AI-ready licenses** within the Microsoft 365 suite
2. Prepare customers to meet Copilot **technical requirements**
3. Reassure customer **data privacy** concerns and ensure comprehensive **compliance and security** controls

Microsoft 365 Copilot | Winning Customers

Customer on
Microsoft 365
E3/ME5
/Biz Premium

Yes?

Lead with Copilot
Address technical readiness gap

Copilot uses information available to users within the MS Graph. To retrieve their business data, users will need to deploy and adopt Microsoft 365 first.

Enable Copilot Center of Excellence
Leverage deployment and adoption resources

No?

Lead with Secure Productivity + Copilot

Deploy Microsoft 365 E3/BP
Drive usage & pitch Copilot

Microsoft 365 is foundational to being AI ready. Although Copilot will be a difference license, customers will need to be on Microsoft 365 E3/E5 as a base license.
Leverage the Microsoft 365 E3 offers and promos

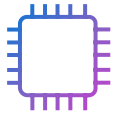

Copilot ready

Unify a complex, disconnected IT ecosystem into a single secure foundation

Devices

that meet specific job requirements

Operating system

that's secure, easy to manage, update, and use

Security

that defends against cyberattacks across multiple platforms

Management

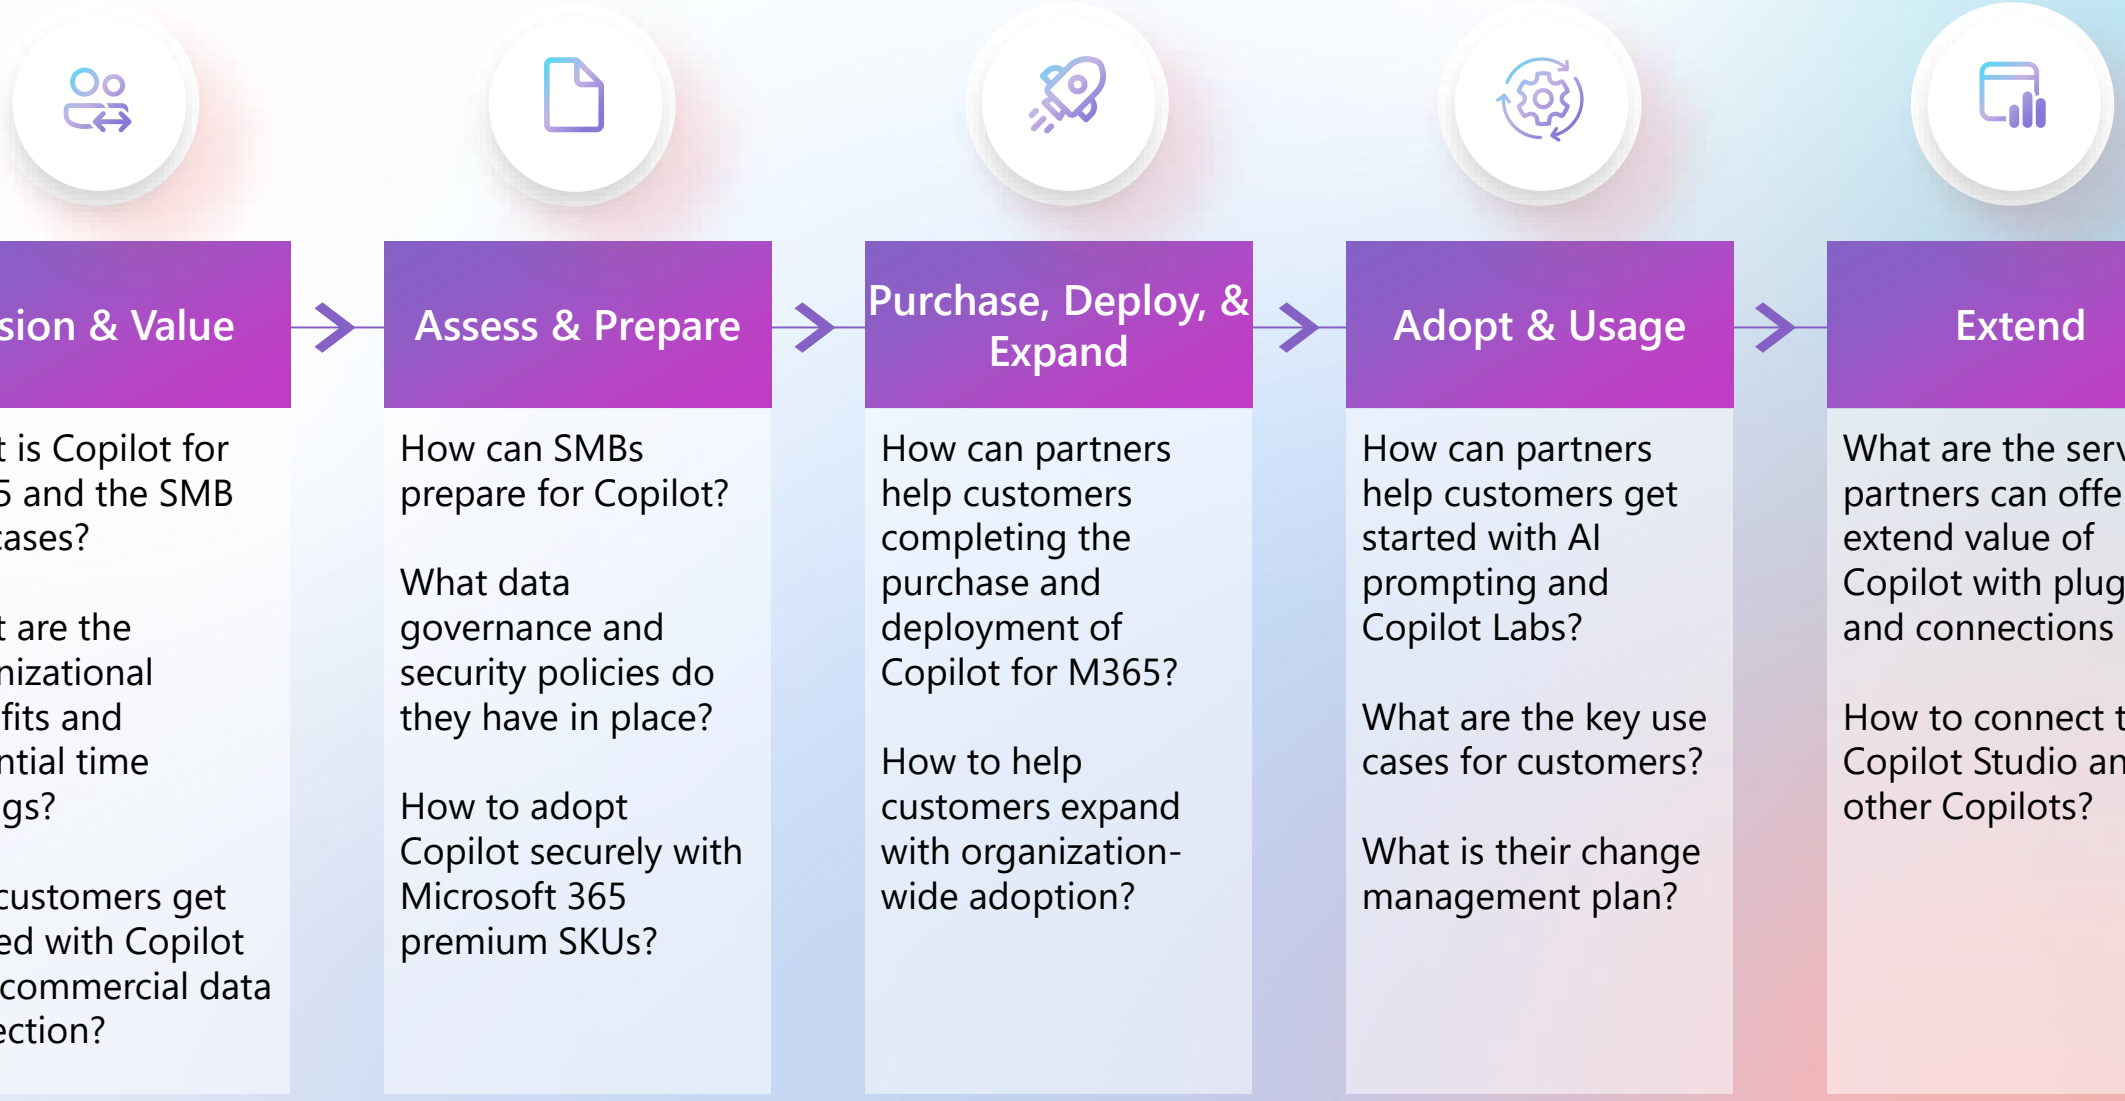

that is built for a heterogenous device estate, including personal devices

Collaboration

that connects every employee across all devices

The customer journey with Copilot for Microsoft 365

Target customers

Customer Profile	Microsoft 365 Copilot licensed customers	Microsoft 365 E3/E5 Customers	On-Premises Customers
Customer Needs	• Customers have 300 seats or more, and looking to expand the number of seats in the same tenant or in a new one • Identify high-value scenarios and start planning for pilot launch	• New to Microsoft 365 Copilot • Looking to adopt generative AI quickly	• Not on Microsoft 365 E3/E5 licenses • Looking to move to an Enterprise suite and bring SharePoint, OneDrive, etc. to the cloud
Sales Play	• Conduct envisioning sessions, readiness assessments, and art of the possible workshops • Configure Microsoft 365 Copilot for high-impact scenarios • Support deployment of pilot • Drive adoption across the organization and set up a champ community for 2 – 3 scenarios • Continue to improve, train, and support	• Lead with the value proposition of Microsoft 365 Copilot • Embed generative AI into the productivity apps your customer uses every day to unleash creativity, unlock productivity, and uplevel skills • Drive adoption of Microsoft 365 (Copilot uses information available to users within MS Graph to retrieve their business data) • Leverage deployment and adoption resources	• Lead with secure productivity and Microsoft 365 Copilot • Copilot inherits your customer's security, compliance, and privacy policies in Microsoft 365 • Set up a strong Zero Trust foundation, streamline endpoint management, and elevate productivity • Microsoft 365 is foundational to being AI-ready • Leverage the ME3 offers and promos

Engagement Plan

Tap into 190M seats opportunity with Microsoft 365 Copilot

Listen and Consult

1. Target customers for M365 Copilot upsell:
   - Upsell copilot to +300 ME3/ME5 seats in a tenant with healthy usage
   - Uplevel usage of Microsoft 365 to be ready for M365 Copilot
   - Upsell to ME3 + AI – Lead with Bing Chat Enterprise
2. Engage with BDMs on driving AI transformation with copilot
3. Assess & document customer motivation & business imperatives

Inspire and Design

4. Deliver the Microsoft 365 Copilot pitch demos based on customer scenarios
5. Nominate and deliver Microsoft 365 Copilot workshops for readiness assessment and identify technical, data, and security gaps
6. Build customer success roadmap

Empower and Achieve

7. Secure customer agreement on deployment, remediation, and adoption plan
8. Address Data security, access, and compliance gaps
9. For eligible customers, connect with Microsoft Commercial Executive to finalize the Microsoft 365 Copilot proposal
10. Close the deal with deployment and management services and product proposal

Realize Value

11. Deliver services to configure Microsoft 365 Copilot and drive adoption for high-impact scenarios

Manage and Optimize

12. Leverage Microsoft 365 Copilot adoption guidance
    - Deliver Adoption Accelerator
    - Train and support end users
13. Deliver ongoing and proactive engagements to drive higher usage of Microsoft 365 Copilot and expand opportunities

Share opportunity with Microsoft sellers for co-selling

Connect with Microsoft Commercial Executive early for proposal

Packaged partner engagements for M365 Copilot

	Inspire & Design		Realize Value
	[1] M365 Copilot Workshop		**[2] Adoption Accelerator**
	[1a] Readiness Assessment	**[1b] Art of Possible + Value Discovery**	
Description	Assess the customer's environment to verify that M365 Copilot prerequisites are met and what steps are needed to ensure data is protected from accidental exposure	Showcase M365 Copilot capabilities, help the customer identify the high value use cases that M365 can enable, and build the plan to implement them	Help the customer take the first steps to roll out and drive adoption of M365 Copilot. Includes setup of a champ community and ACM for 2 – 3 use cases
Components	▪ Assessment delivery guide ▪ Technical deck ▪ Data protection/governance assessment	▪ Workshop delivery guides ▪ Copilot pitch deck and demos ▪ Scenario discovery guide ▪ Business value calculator	▪ Engagement delivery guide ▪ Setup wizard ▪ Adoption guidance, content, community ▪ Copilot Center of Excellence template
Outcomes	▪ Customer readiness scorecard ▪ Recommendations to address gaps	▪ High value use cases ▪ Implementation plan	▪ Champ community established ▪ 2 – 3 use cases activated
Duration	1 day	2 days	3 days (non-continuous)
Target customers	High propensity customers for M365 Copilot (focus on customers with +300 E3/E5 licenses and healthy usage		Customers with M365 Copilot licenses

Note: Workshops are partner-led, however please engage with Microsoft sellers when executing the workshop for your customer. Share Copilot Referrals through Partner Center

Help SMBs on their AI journey every step of the way

Available on desktop via:

- Copilot.Microsoft.com
- Windows
- Microsoft Edge
- Microsoft Bing

Available on mobile via:

- Copilot app: Microsoft Entra ID sign-in support is coming soon
- Edge app
- Bing app
- Microsoft 365 app

Microsoft's AI principles

Microsoft Cloud — AI you can trust

Your data is **your** data.

Your data is **not** used to train the OpenAI foundation models without permission.

Your data is **protected** by the most comprehensive enterprise compliance and security controls.

Copilot for Microsoft 365

Built on Microsoft's comprehensive approach

Security + Compliance + Privacy + Responsible AI

Layered security that improves your security posture

Microsoft 365 Business Premium

Identity and access controls

Microsoft Entra ID Plan 1

Multi-Factor authentication to protect against password loss

Passwordless authentication

Self Service Password Reset

Conditional Access to provide access controls to work data

Cloud App Discovery to discover Shadow IT

Device management

Microsoft Intune

Keep devices up-to-date with the latest OS

Protect devices from bad actors and misuse

Allow more secure access to sensitive data – even from personal devices

Remotely wipe data from lost and stolen devices

Pre-load access to Wi-Fi, VPN with certificate management

Device security

Microsoft Defender for Business

Ransomware protection with AI powered EDR with automatic attack disruption

Next gen-AV protection

Protection across Android, iOS, Max, Windows and Linux

Threat and vulnerability management

Monthly summary reports

Email and app security

Microsoft Defender for Office 365

AI powered LLM based threat protection

Phishing and malware defense across email, Microsoft Teams, OneDrive and SharePoint

SafeLinks with time of click URL filtering

Safe Attachments with real-time attachment scanning in sandbox

Data security

Microsoft Purview

Data Loss Prevention to protect sensitive data such as credit card or social security numbers

Classify and label sensitive data

Apply protection such as “Do Not Forward” or “Encrypt Email”

Audit, search and legal hold

Security and compliance for Microsoft 365 Copilot in SMB

Foundational security controls

Microsoft 365 Business Basic or Business Standard + Microsoft Copilot for M365

- **Multi-factor authentication (MFA)** for secure access to M365 applications with Copilot
- **Search and export** Copilot prompts and interactions
- **Audit logs** for Copilot interactions
- **Retention or deletion policies** for Copilot interactions and generated content
- **Restricted SharePoint Search** for Copilot interactions and generated content

Comprehensive security controls

Microsoft 365 Business Premium + Microsoft Copilot for M365

- **Multi-factor authentication (MFA) with conditional access** based on identity, device, location, and network
- **Search, export, eDiscovery case management, and legal hold** for Copilot prompts and interactions
- **Audit logs** for Copilot interactions
- **Retention or deletion policies** for Copilot interactions and generated content
- **Manual sensitivity and retention labels** for content processed by Copilot in files and emails
- **Data loss prevention policies** to help protect sensitive data from Copilot in files and emails

Copilot top questions asked

Security/Compliance

How do we manage authentication and authorization of AI calls to the LLM to ensure data is safe?

How can I be aware when Copilot uses/returns sensitive information?

When and how will we be able to audit Copilot usage; see what content is being accessed?

Privacy/data residency

How and where are prompts stored and are they discoverable?

Where is my data processed?

How do we know our data is secure: how is our data encrypted?

Adoption/Readiness/Impact

What do we need to do to get ready?

What types of admin controls are available?

What type of success criteria / measures should I use to gauge the benefit and impact of giving users Copilot?

Microsoft is built on trust

1. Your data is your data
2. Your data is not used to train or enrich foundation AI models
3. Your data and AI models are protected at every step
4. Our Customer Copyright Commitment

Microsoft 365 Copilot is the AI assistant you can trust

Security

Honors your existing permissions

Persistent label inheritance and DLP policies

Risk-based conditional access and endpoint management

Governance & Compliance

Ramp your data preparedness for AI

Detect and investigate non-compliant usage

Guided assistance to remain compliant with AI regulations

Privacy

You control your data

You control your data location

Your data isn't used to train foundation models

Your Microsoft 365 security, governance, compliance, and privacy policies

Concerns we've heard from you...

Shadow AI use

78%

of AI users use BYOAI

75% of employees are using AI, which means ~58% of employees are bringing their own AI to work[1].

Lack of protection

97%

of organizations

have concerns about implementing AI due to the lack of controls to mitigate risks of data leakage[2].

Increased AI regulations

By 2027

at least one global company will see its AI deployment banned by a regulator for noncompliance with data protection or AI governance legislation[2].

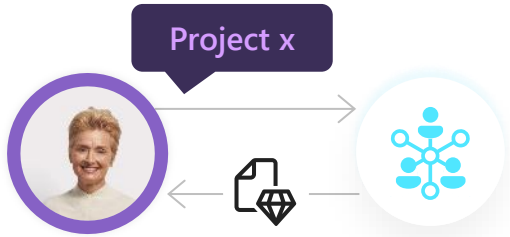

1. 2024 Work Trend Index Annual Report from Microsoft and LinkedIn: AI at Work Is Here. Now Comes the Hard Part
2. Securing data in an AI-first world with Microsoft Purview, Nov 15, 2023

Security and compliance challenges

1

Data oversharing

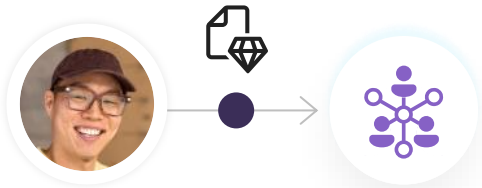

Users may access sensitive data via AI apps they're not authorized to view or edit

2

Data leak

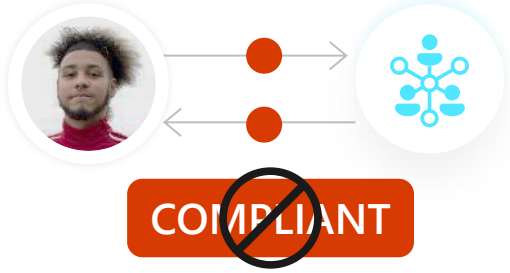

Users may inadvertently leak sensitive data to AI apps

3

Non-compliance usage

Users use AI apps to generate unethical or other high-risk content

Microsoft 365 Copilot
+ Microsoft 365 E5
+ SharePoint Advanced Management

Restricted SharePoint Search

This is intended as a temporary solution to give you time to review and audit site permissions while implementing robust data security solutions from Microsoft Purview and content management with SharePoint Advanced Management

- **Restricted SharePoint Search** is designed for organizations particularly concerned about unintentional oversharing of content.
- When enabled, Copilot experiences and organization-wide search are limited to a select set of SharePoint sites, as well as the individual user's files and content.

PRE-REQUISITES

- Available to tenants with Microsoft 365 Copilot subscriptions.
- Activation requires Global/Tenant/SharePoint admin rights.

IMPACT

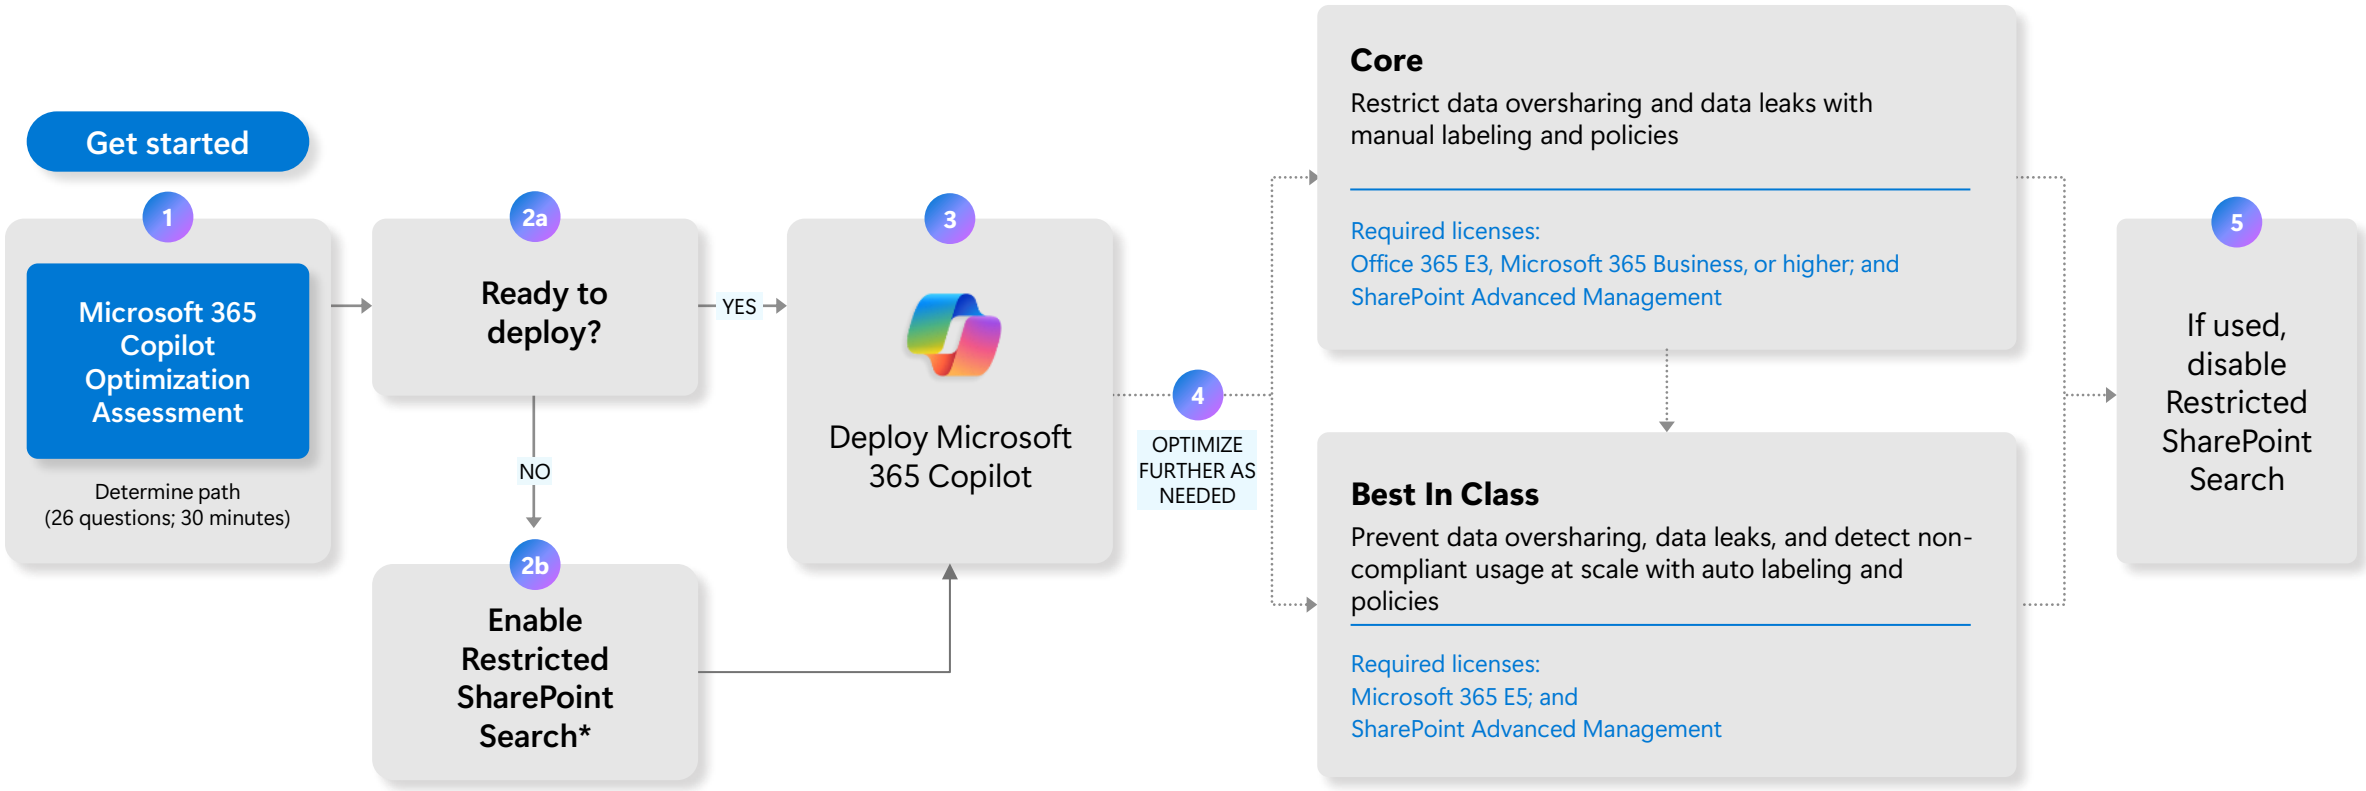

Restricted SharePoint Search disables organization-wide search, while allowing you to select sites that you trust. This means users in your organization can use Copilot to reason over:

- An allowed list of curated SharePoint sites set up by admins (up to 100 SharePoint sites), honoring existing permissions on a site.
- Users' OneDrive, chats they are part of, emails they send and receive, calendars they have access to, etc.
- Files that are shared with and accessed by users.
- Content from users' frequently visited sites.

Access this blog for more info

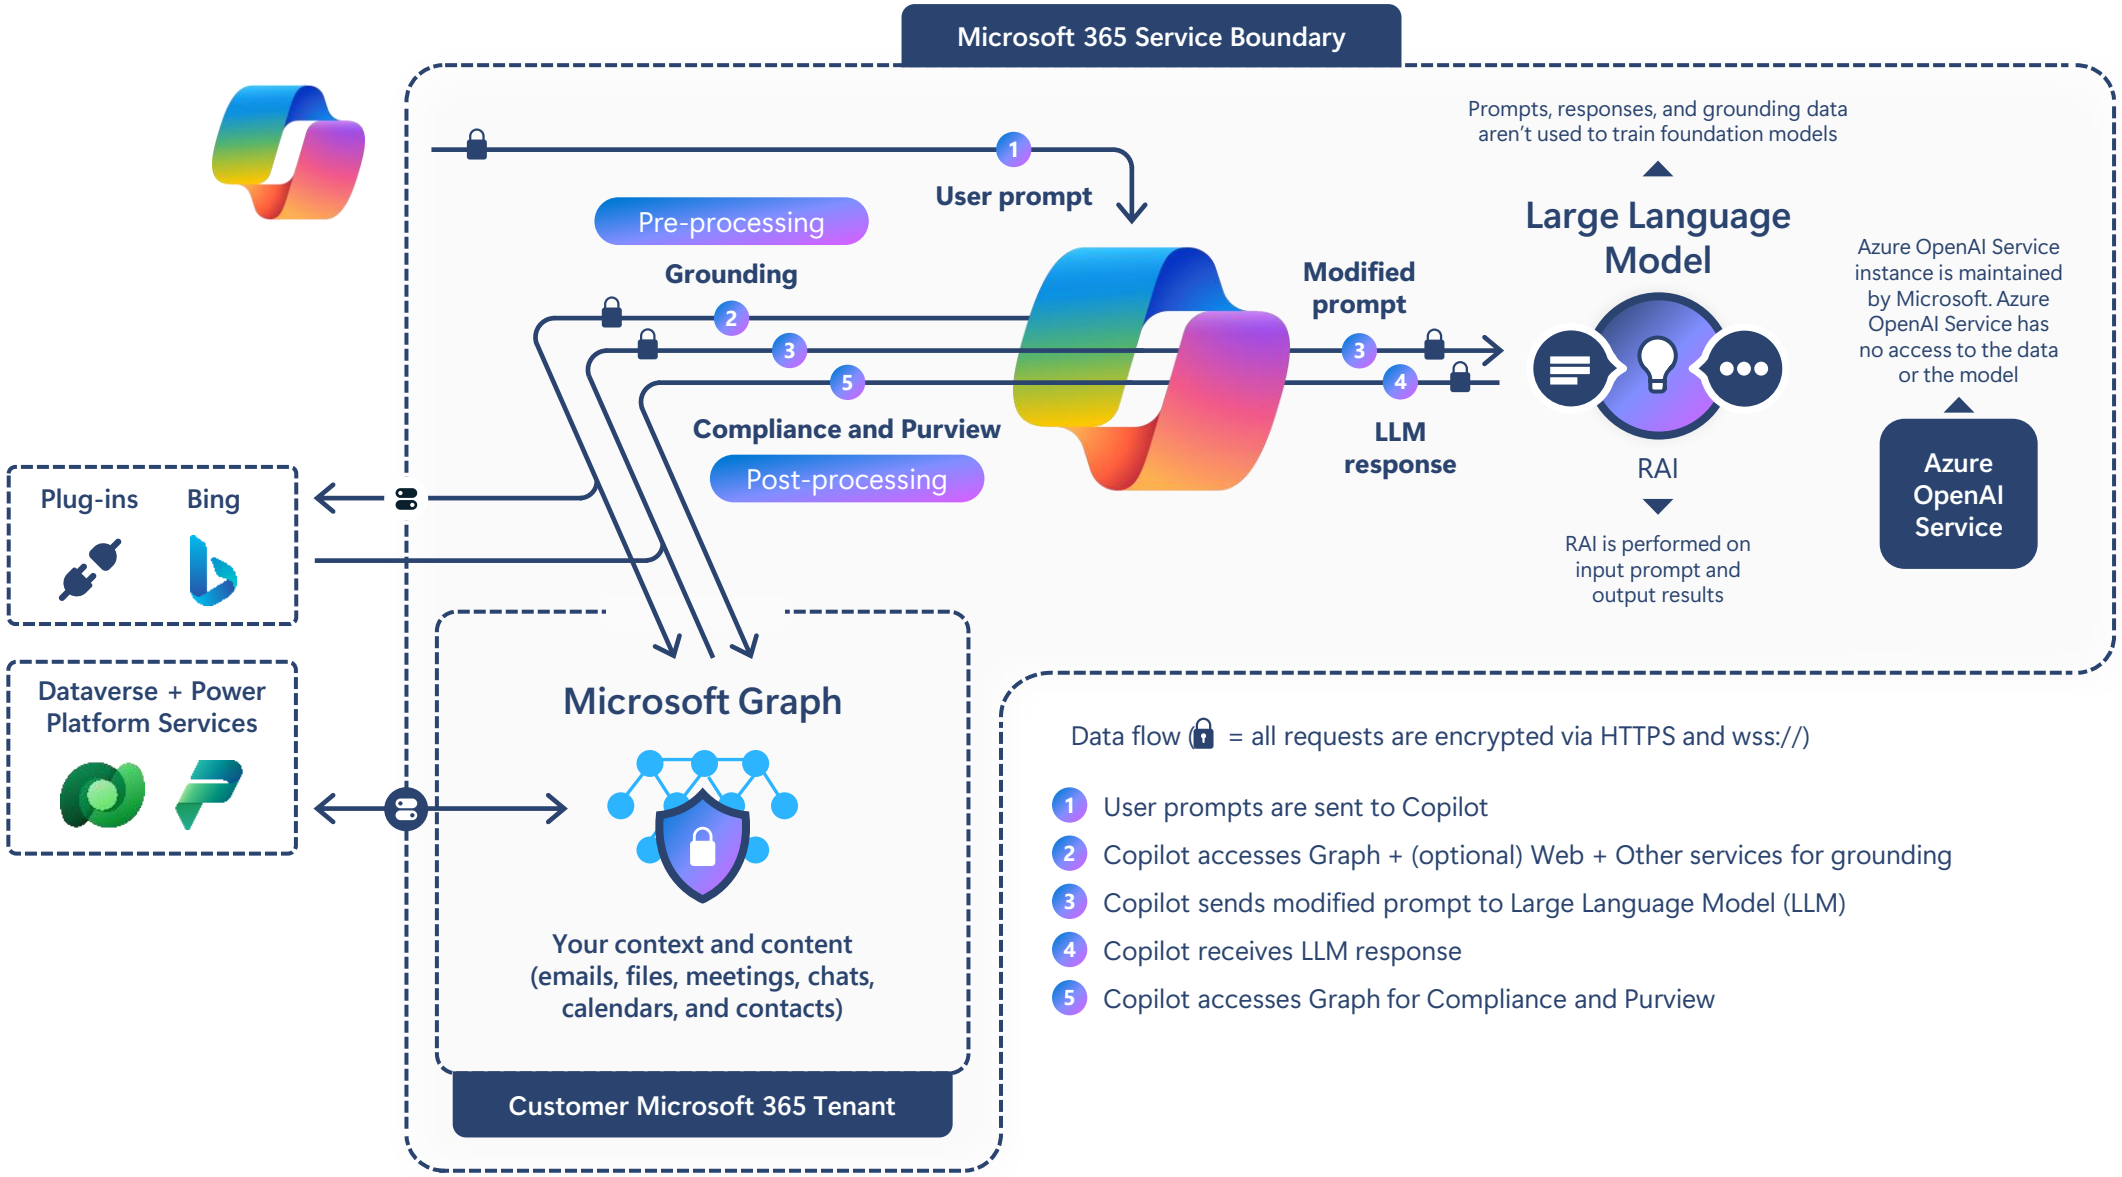

Apply appropriate Data Security controls

Get started quickly and continue to optimize along the way

** Restricted SharePoint Search will limit Microsoft 365 Copilot experiences and organization-wide search. It is a temporary option which gives you time to address oversharing concerns while getting started on your Copilot journey.*

Microsoft 365 Copilot architecture

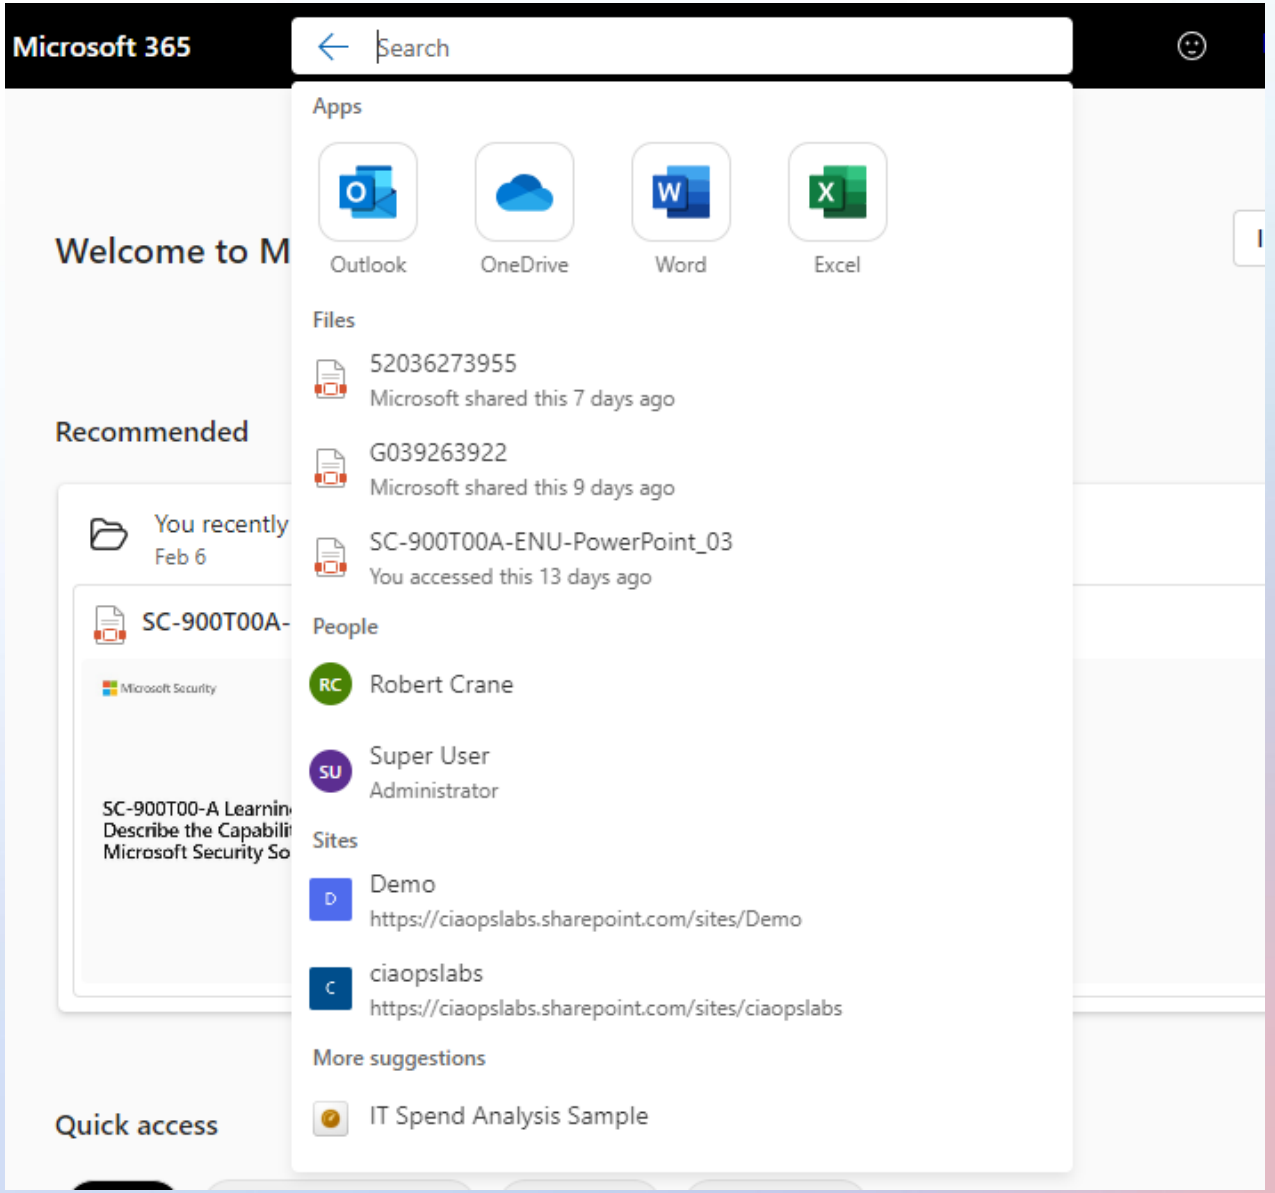

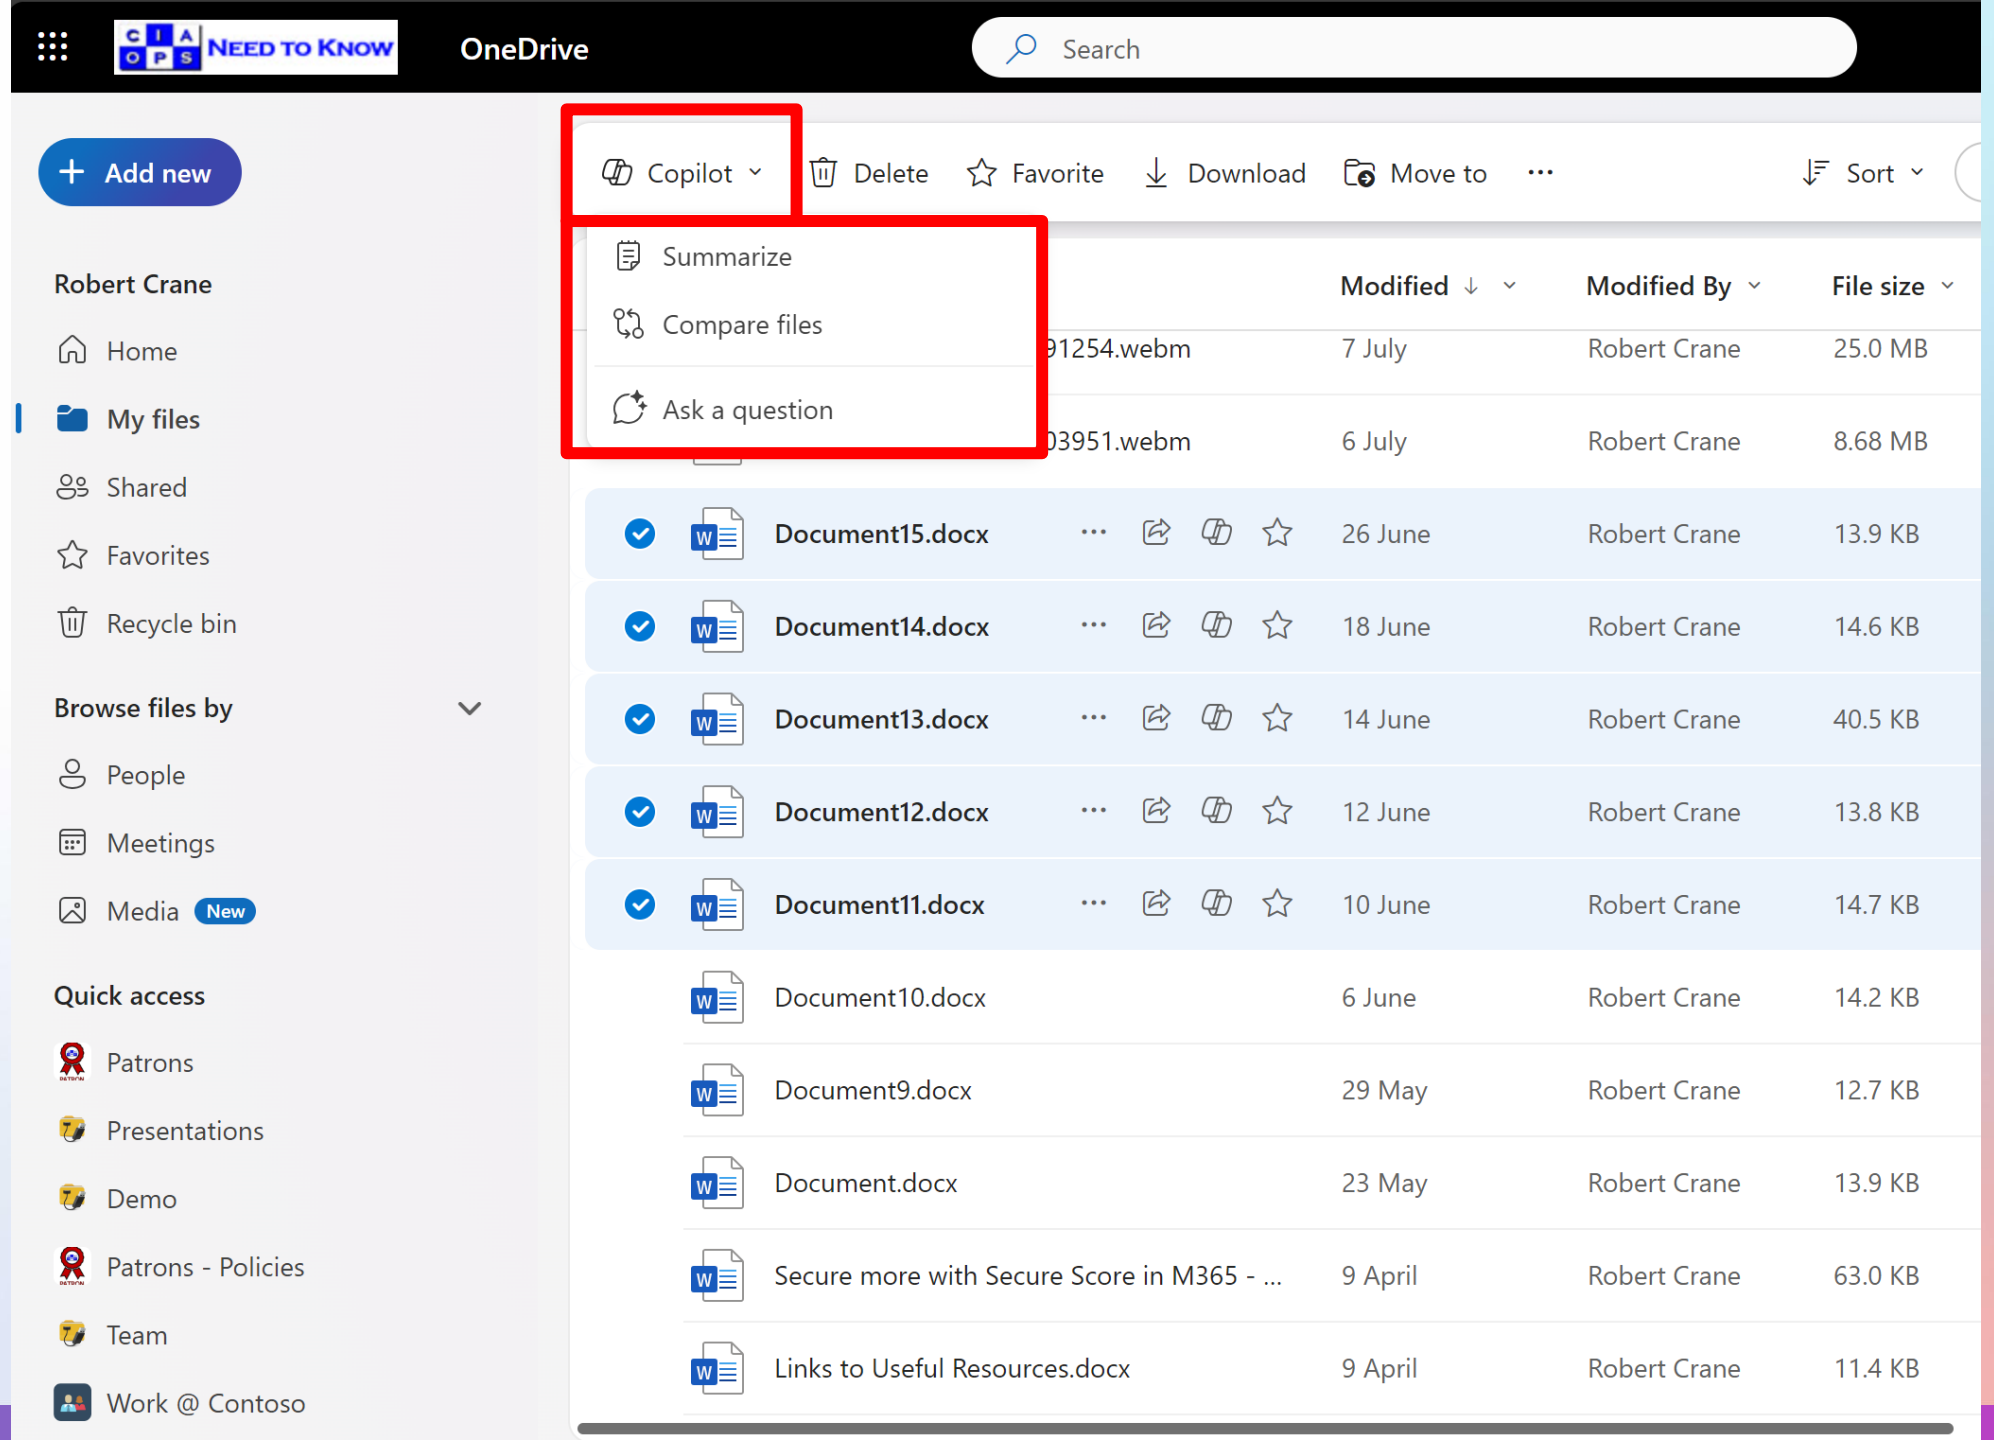

Data flow (🔒 = all requests are encrypted via HTTPS and wss://)

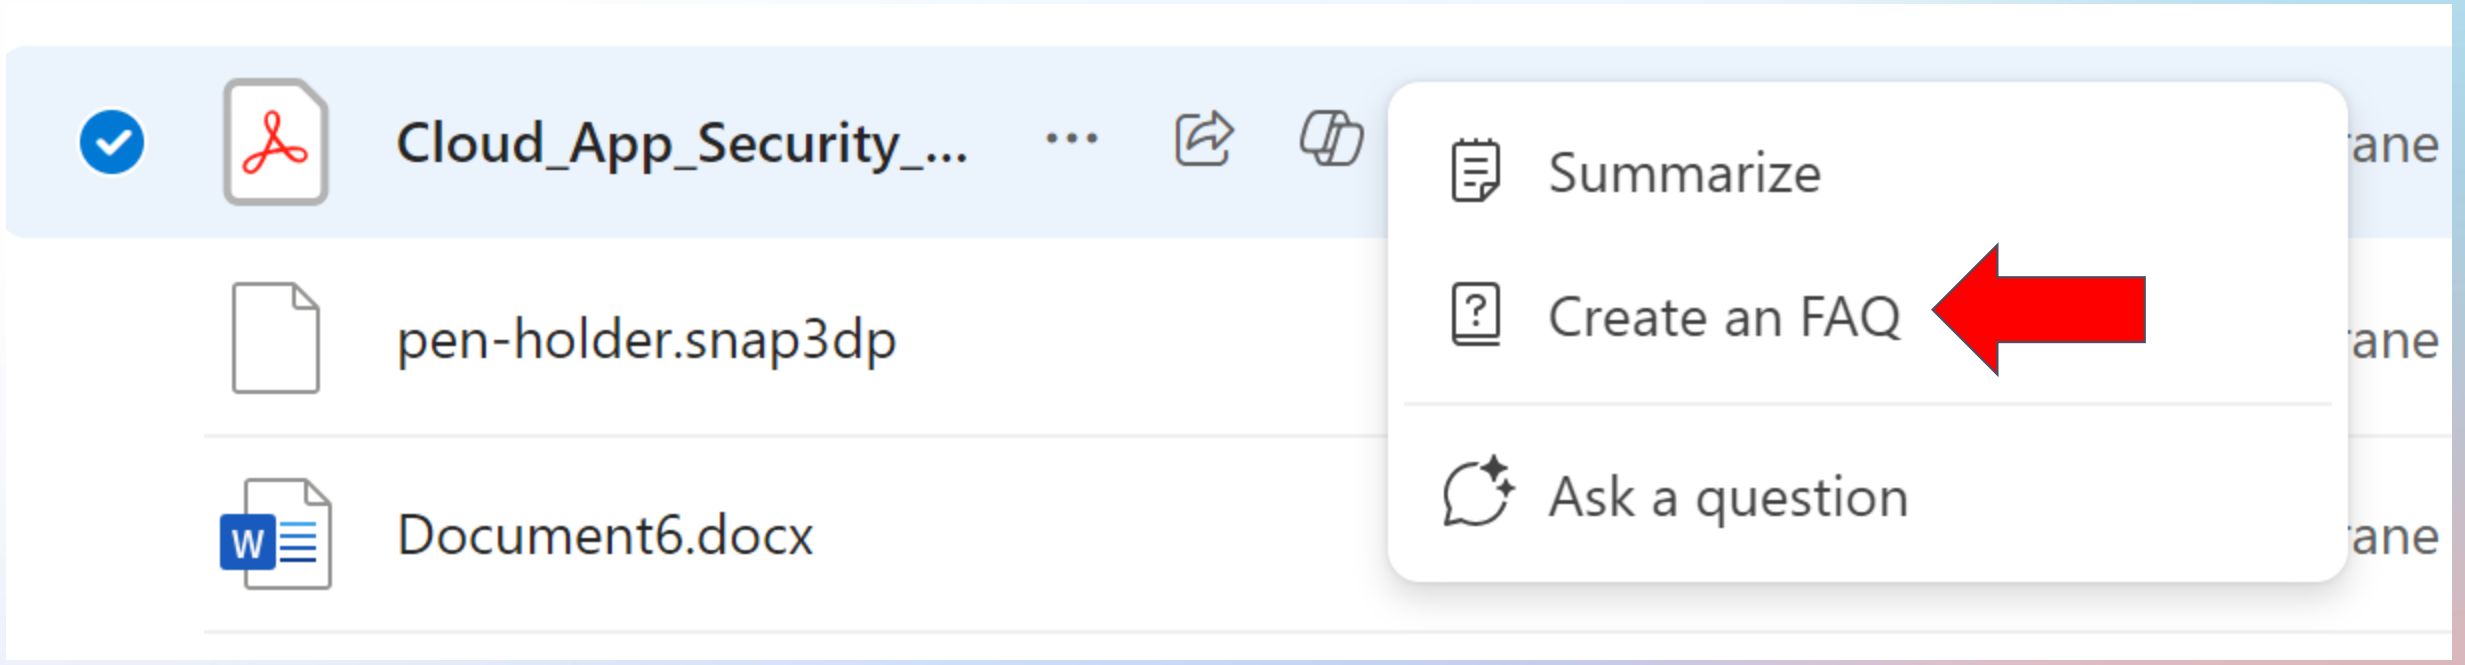

1. User prompts are sent to Copilot
2. Copilot accesses Graph + (optional) Web + Other services for grounding
3. Copilot sends modified prompt to Large Language Model (LLM)
4. Copilot receives LLM response
5. Copilot accesses Graph for Compliance and Purview

Getting customers AI ready

Copilot for Microsoft 365

Pre-sales services: Get customers AI Ready

Prepare customers for Copilot for Microsoft 365 with a Copilot Optimization Assessment

Execute a Copilot Optimization Assessment to help you customers in their AI journey to Copilot for Microsoft 365, including the 3 key steps:

Assess the customer's readiness for Copilot for Microsoft 365

- ✓ Foundational productivity readiness
- ✓ Data readiness
- ✓ Security readiness

Microsoft Copilot

(formerly Bing Chat Enterprise)

Why Microsoft Copilot?

It's powerful and protective

Commercial data protection

Business data is protected

- Included with Entra ID
- Chat data is not saved
- No eyes-on access
- Chat data is not used to train the model

Access to powerful AI models

- Built on the latest AI models (GPT-4 and DALL-E 3)
- No additional cost for Entra ID users[1]

Transparent and current

- Citations provided for each response
- Responses sourced with up-to-date information

1. On December 1, Copilot with commercial data protection will be generally available with Microsoft 365 E3, E5, A3, A5 (Faculty only), Business Standard, Business Premium, and eligibility begins for Microsoft 365 F3 for frontline workers. Our intention is to include additional Entra users over time.

Workday efficiencies with Copilot

Summarize a long PDF

Turn a 20-page, jargon-filled PDF into 5 bullets using Copilot in Edge

Draft emails and social content

Use it as your professional writer on call to draft emails, captions, and more

Generate images

Leave behind stock images and text-only reports in favor of custom-generated images for emails, on social, and more

Learn new skills

Ask questions tailored to your needs and interests to get consolidated key points from the internet for you

Get answers for specific, complex questions

Get answers to questions that require multiple data points or a degree of analysis

Extending availability to eligible customers

Users signed into Copilot with their eligible work or school accounts can access Copilot with commercial data protection at no additional cost

Current eligible SKUs*

- Microsoft 365 E3, E5, F3
- Microsoft 365 A3, A5 (faculty only)
- Business Standard
- Business Premium

Future eligibility with Entra IDs*

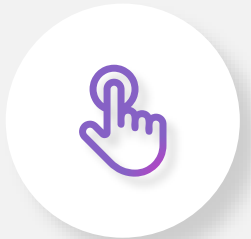

Copilot with commercial data protection will be available to all Entra ID users in the future

Timing to be announced

*Government and student users not included at this time

Privacy and data residency

Microsoft’s approach to privacy

You control your data

You know where your data is located

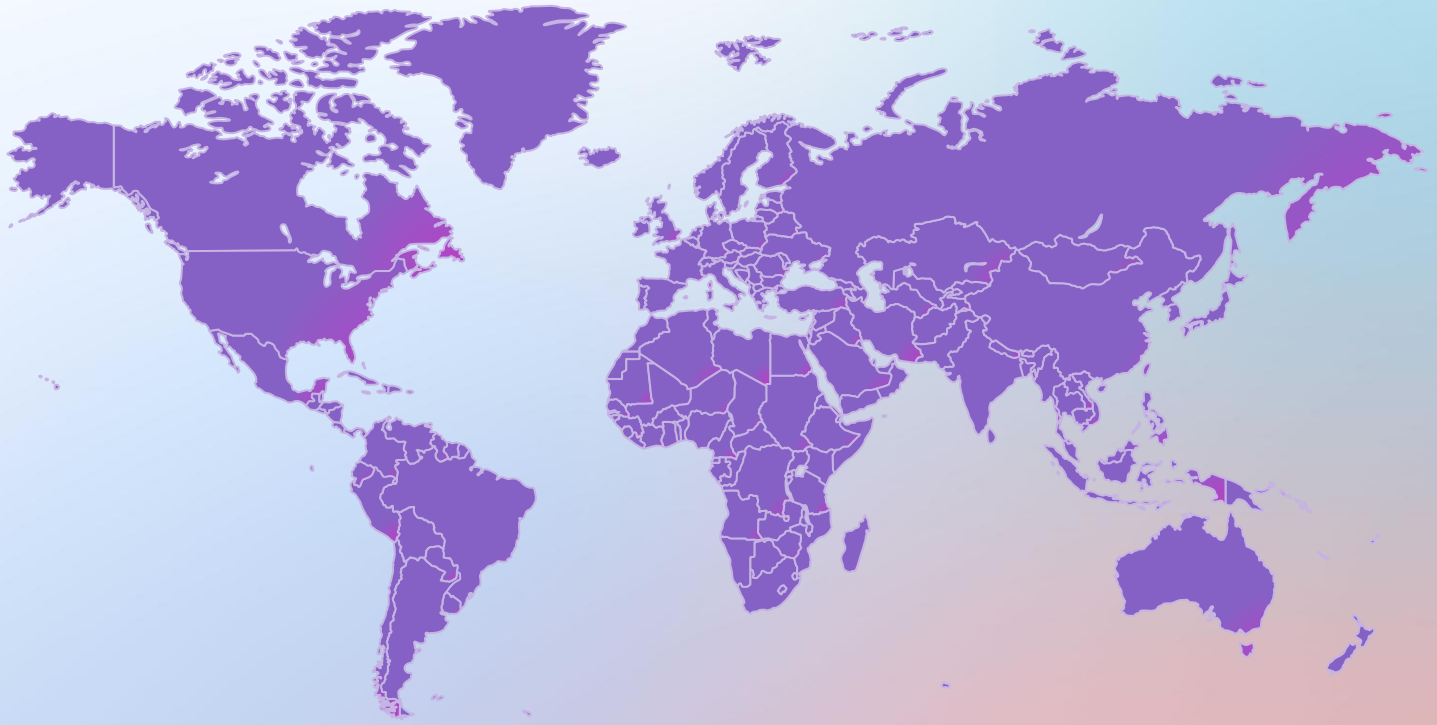

We secure your data at rest and in transit

We defend your data

Where does Microsoft store customer data?

Customers specify a country or region while signing up for a new Microsoft 365 tenant. That selection determines the tenant's default geography. Microsoft makes decisions on where to store customer data by combining that default geography with the available geographies for each service.

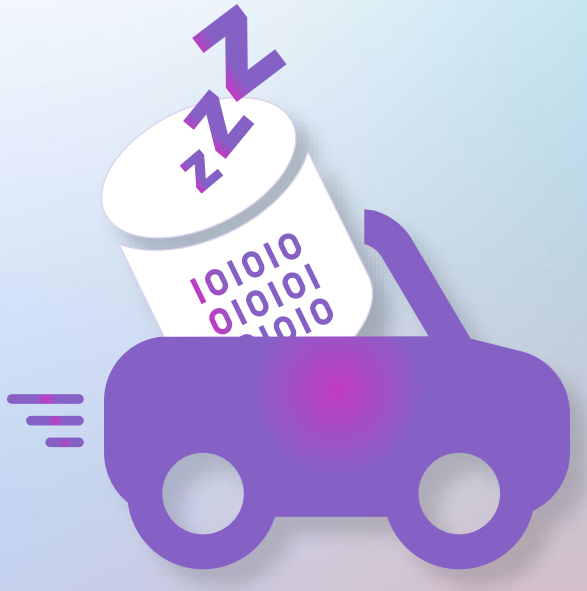

Data residency applies to customer data at rest

Data residency commitments provide customers with additional confidence about the location or locations where data is stored at rest.

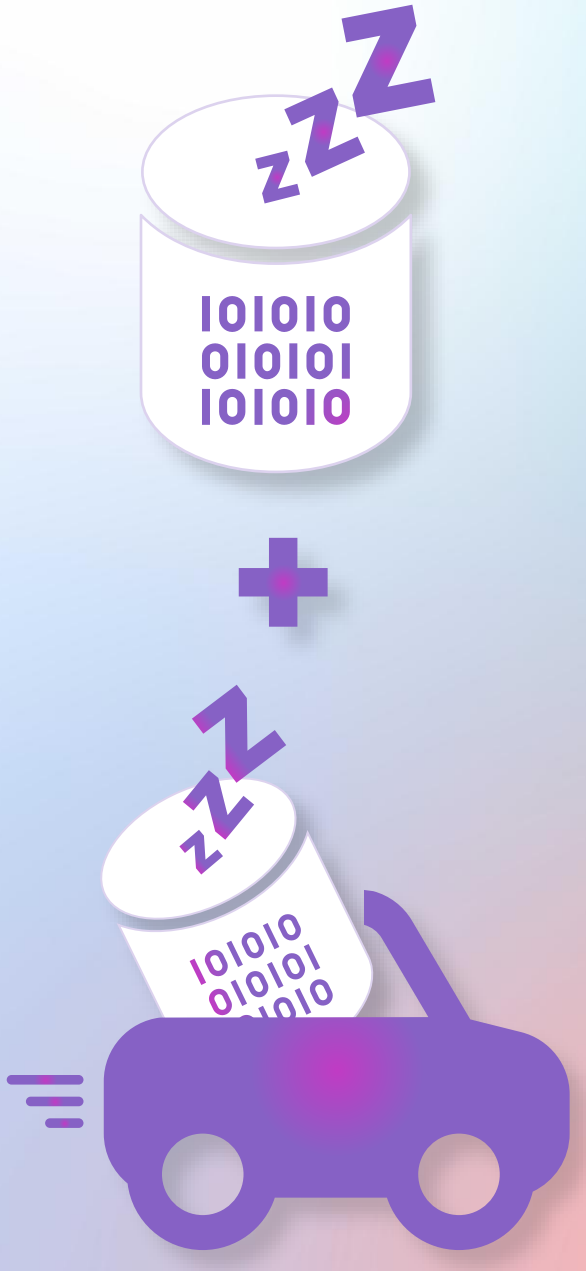

Microsoft 365 customer data in transit

Data is in transit whenever a user's device is communicating with a Microsoft server, or when a Microsoft server is communicating with another server.

Microsoft encrypts customer data at rest and in transit

Encryption both at rest and in transit helps provided protections against unauthorized access, disclosure, sharing or usage of data.

Microsoft offers several data residency options

Product Terms Data Residency

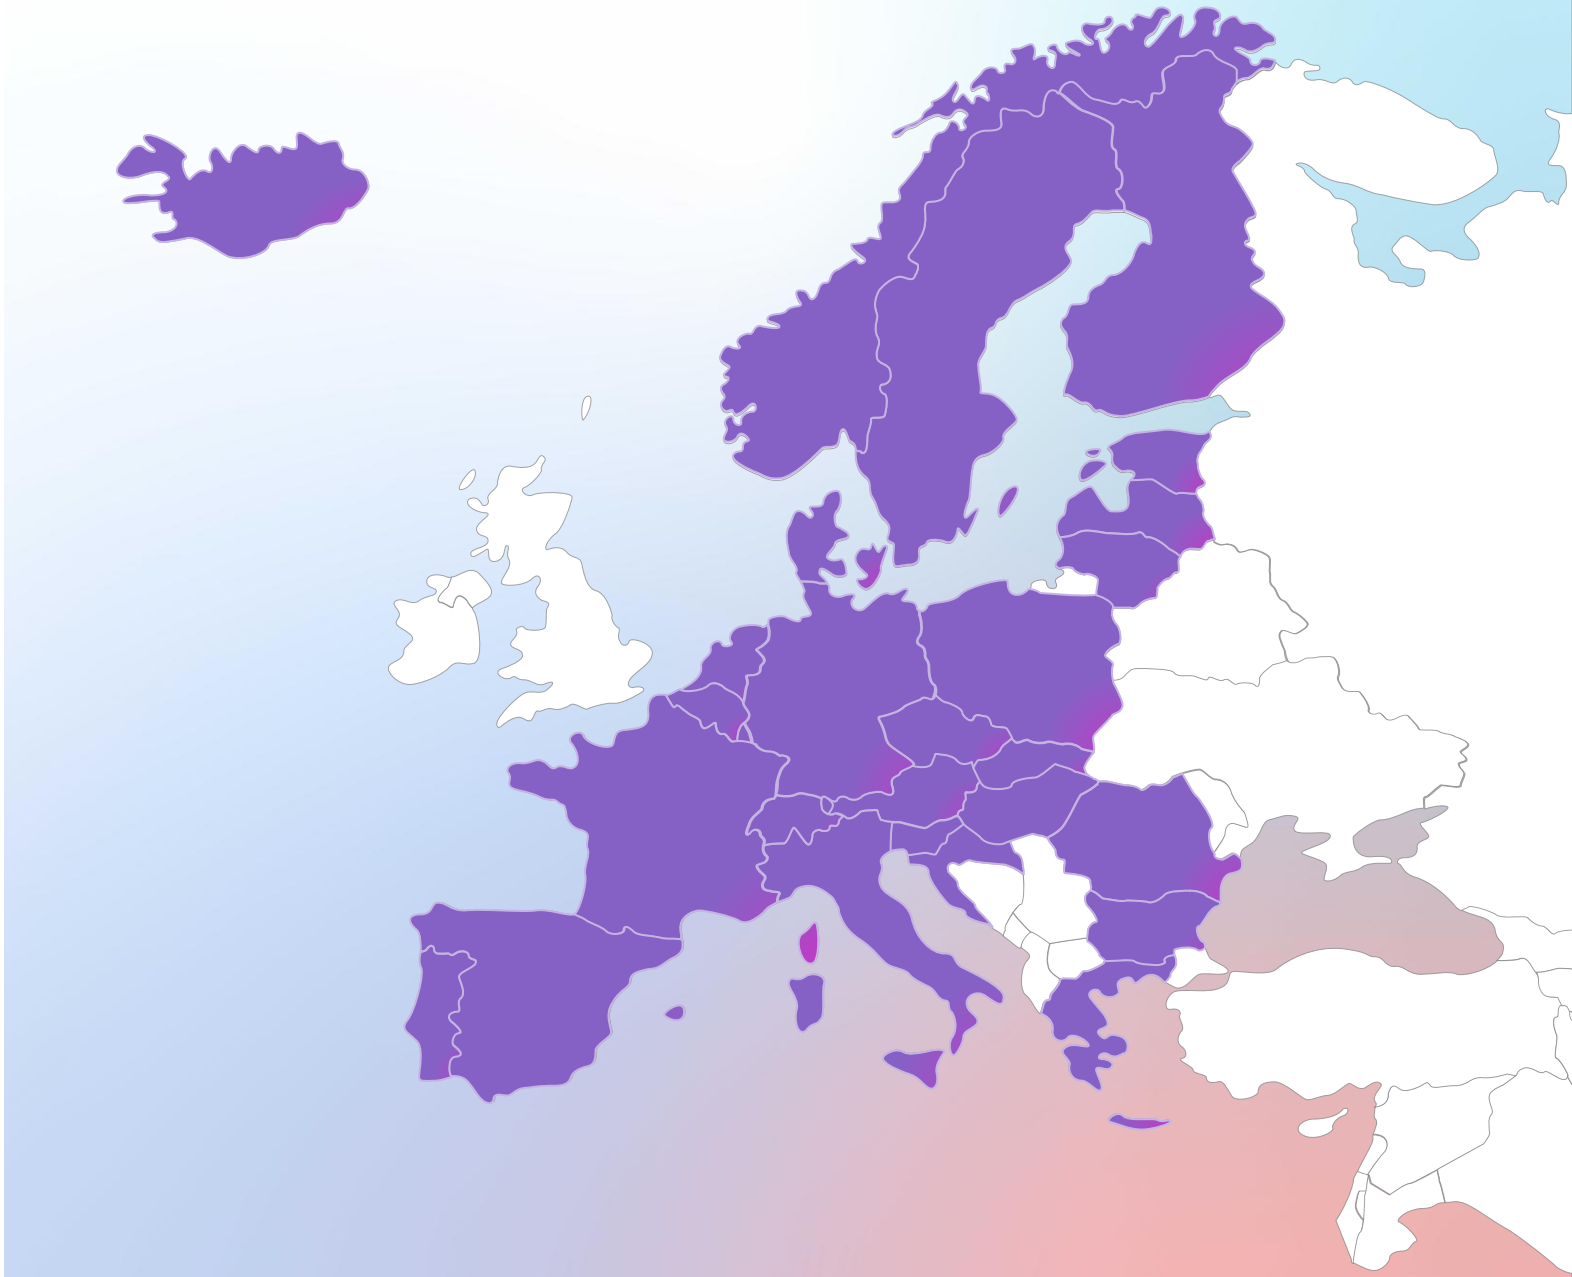

Advanced Data Residency (ADR) Add-on

Multi-Geo Capabilities Add-on

European Union Data Boundary (EUDB)

The EU Data Boundary provides more expansive commitments

EUDB terms provide contractual commitments for storing and processing EU + EFTA customer data within the European Union.

Copilot privacy and data location

You control your data

Microsoft does not use customer data to train foundation LLMs that Copilot uses.

Copilot for Microsoft 365 commitments

Microsoft Product Terms

- Universal License Terms – Microsoft Generative AI services
- Microsoft Copilot copyright commitment
- EU Data Boundary Services
- Core Online Services*

Microsoft Products and Services Data Protection Addendum

Advanced Data Residency (ADR)* Add-on

Multi-Geo Capabilities* Add-on

*updates for 2024

Customer scenarios

Customer scenarios	Storage of Copilot data	Processing of Copilot data
B Contoso is a company based in Brussels, with a sign-up location in Belgium	B Contoso Copilot data is stored in the EU	B Contoso Copilot data is processed in the EU
M Adventure Works is a company based in New York, US, with a sign-up location in the US	M Adventure Works Copilot data is stored in North America but could be stored anywhere	M Adventure Work Copilot data is mostly processed in North America but could be processed anywhere
Y Fabrikam is a Japanese company based in Tokyo, with a signup location in Japan	Y Fabrikam Copilot data is stored in Japan but could be stored anywhere	Y All other geographies, including Japan for Fabrikam, Copilot may call into any available region

How do we ensure our customers' data used by Copilot is safe?

Administrator controls & privacy settings

SharePoint Online permissions

OneDrive permissions

Microsoft 365 Group membership

Microsoft 365 Group privacy settings (Public/Private)

Encryption

How do we manage authentication and authorization to ensure data is safe?

Implement Strong Authentication

Manage Vulnerabilities

Microsoft Purview Audit

How does Copilot for Microsoft 365 use proprietary organizational data?

Copilot generates responses anchored in organizational data, such as documents, emails, calendar, chats, meetings, and contacts.

Copilot only surfaces organizational data to which individual users have at least view permissions.

Prompts, responses, and data accessed via Copilot are not used to training foundational LLMs.

How are user interactions with Copilot stored?

Both the user's prompt and Copilot's response are stored, including citations used to ground the response.

All data is processed and stored in alignment with contractual commitments for other content in Microsoft 365.

Features like content search and retention policies apply to Copilot interactions.

Users can delete their Copilot interaction history, including prompts and responses; however, these are soft deleted if a retention policy or legal hold is applied.

Individual Copilot interactions (prompts and responses) are stored in the Non-IPM subtree of the individual users' Exchange Online mailbox, similar to how Teams chat interactions are stored.

How does Copilot handle data residency?

Copilot for Microsoft 365 calls to the LLM are routed to the closest data center.

Calls to the LLM can call into other regions during high utilization periods.

Copilot for Microsoft 365 honors data residency commitments, including Advanced Data Residency (ADR) and Multi-Geo Capabilities.

For European Users (EU), EU traffic stays within the EU Data Boundary.

Shared responsibilities of security for AI usage for Copilot for Microsoft 365

Access to production environment

Set up access controls that strictly restrict standing access to customer's data or production environment

Protect data

Encrypt data at rest and in transit based on industrial standards (BitLocker, TLS, etc.)

Access to AI apps

Set up access control policy, leveraging identity and access management solutions

Protect data entered and created by AI apps

Apply sensitivity label that associates with encryption and DLP controls to files with sensitive data

User accountability of AI use

Implement and operate organization-wide AI security training

Why Microsoft is uniquely positioned to empower secure AI usage

Integrated

The only security solutions that natively integrate with Microsoft Copilot

Comprehensive

End-to-end security across threat protection, identity & access management, and data security

Intelligent

Industry-leading AI vendor with AI-powered security capabilities

Microsoft Purview with Microsoft 365 Business Premium

Comprehensive solutions to secure and govern your data

Data Security

Secure data across its lifecycle, wherever it lives

- Data loss prevention
- Information protection

Data governance

Govern data seamlessly to empower your organization

- Data map
- Data catalog
- Data estate insights

Risk & compliance posture

Manage critical risks and regulatory requirements

- Compliance manager
- eDiscovery and audit

Office 365 apps | **Unstructured & structured data** | **Across Azure and M365**

Shared platform capabilities

Data map, data classification, data labels, audit, data connectors

Action

Security and Compliance controls for Copilot for Microsoft 365

Essential security controls

Copilot + M365 Business Standard

- Multi-factor Authentication
- Audit Logging
- Basic content and keyword search

Comprehensive security controls

Copilot + Microsoft 365 Business Premium

Everything in M365 Business Standard, plus:

- Conditional Access
- Sensitivity labels
- Data loss prevention policies
- Unified endpoint management
- eDiscovery, litigation hold and retention policies

Note: Not all features/products shown.

Security and Compliance controls for Copilot for Microsoft 365

Essential security controls

Copilot + M365 Business Standard

Multi-factor Authentication and security defaults when accessing M365 to use Copilot

Basic security controls for mobile devices accessing M365 resources

Basic content search for Copilot prompts and interactions

Audit logs and retention or deletion policies for Copilot interactions

Prohibit copilot from including sensitive data in responses for users that have no extract permissions

Exclude sensitive files from being processed by Copilot for users that have no view permission

Comprehensive security controls

Copilot + Microsoft 365 Business Premium

Everything in M365 Business Standard, plus:

Conditional Access policies based on identity, device, location, & network to access M365 resources when using copilot

Manage the access and use of M365 apps across devices that use Copilot

Manually label and protect Microsoft 365 content (files and emails only) used by Copilot and **inherit and cite sensitivity labels** in Copilot outputs

Protect sensitive M365 data generated by Copilot from exfiltration (files & emails only)

eDiscovery, case management and legal hold capabilities for Copilot prompts and interactions

Note: Not all features/products shown.

Why is security and data governance important when Deploying Copilot for Microsoft 365?

Internal confidential data

Restrict and protect internal confidential data, such as HR and personnel information

Partner and supplier data

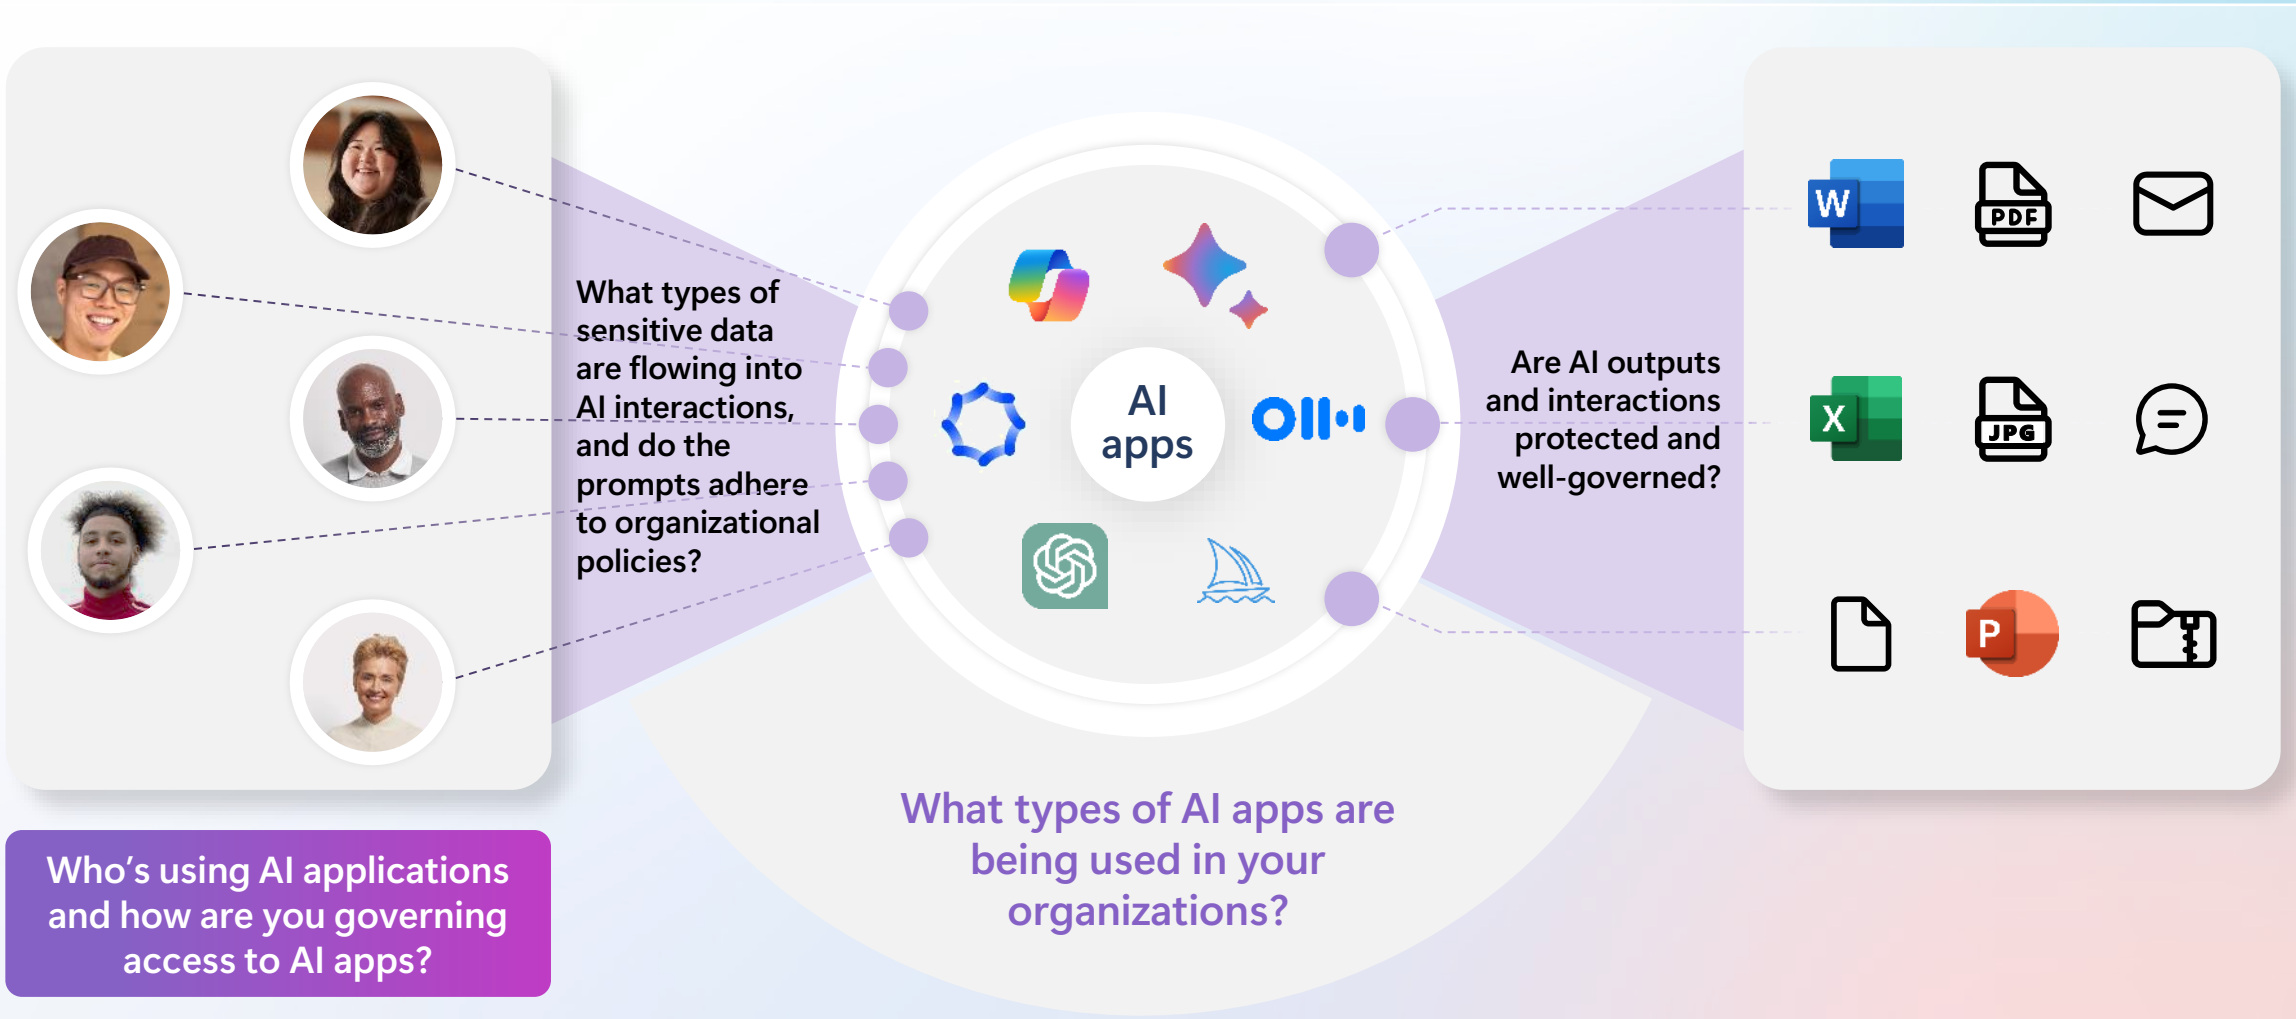

Restrict and protect partner and supplier confidential information and PII

Customer data

Restrict and protect customer PII and confidential information

Information protection & data governance protect against risks

Action 2

Gather specific information protection and data governance requirements

Action

Decide	Deploy	Know	Protect	Prevent
Decide who is authorized to conduct investigations (partner, customer, both)	Deploy an information protection solution	Know your data	Protect your data	Prevent data loss

Get ready

Build Copilot for Microsoft 365 implementation plan

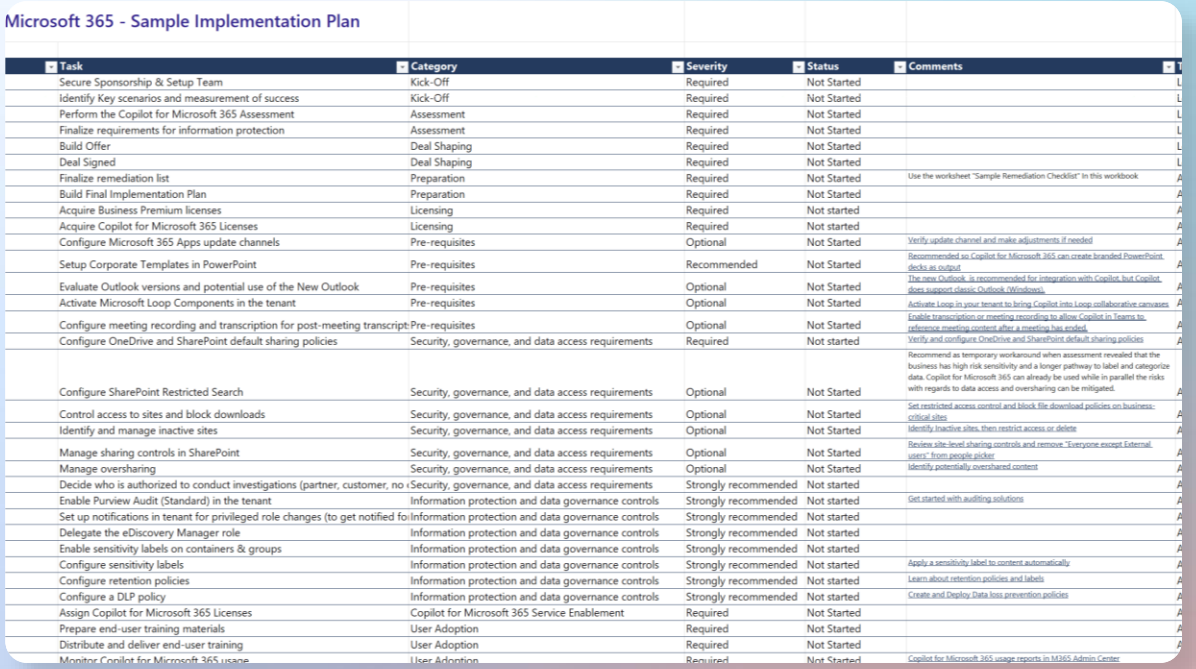

Build an implementation plan

Use the results of the Optimization Assessment and scenario discovery to develop a plan for implementation of Copilot for Microsoft 365.

Questions to help develop the plan:

- Are all the gaps in the optimization assessment listed in the plan?
- Have you identified the first set of employees that would get Copilot for Microsoft 365?
- How many licenses would you need to purchase?
- Are there any data security questions that you need to address?
- Do all items have owners and due dates?
- Have you identified key adoption steps for the first set of prioritized scenarios?

Sample plan included in training materials

Microsoft 365 - Sample Implementation Plan

Task	Category	Severity	Status	Comments
Secure Sponsorship & Setup Team	Kick-Off	Required	Not Started	
Identify Key scenarios and measurement of success	Kick-Off	Required	Not Started	
Perform the Copilot for Microsoft 365 Assessment	Assessment	Required	Not Started	
Finalize requirements for information protection	Assessment	Required	Not Started	
Build Offer	Deal Shaping	Required	Not Started	
Deal Signed	Deal Shaping	Required	Not Started	
Finalize remediation list	Preparation	Required	Not Started	Use the worksheet "Sample Remediation Checklist" in this workbook
Build Final Implementation Plan	Preparation	Required	Not Started	
Acquire Business Premium licenses	Licensing	Required	Not started	
Acquire Copilot for Microsoft 365 Licenses	Licensing	Required	Not started	
Configure Microsoft 365 Apps update channels	Pre-requisites	Optional	Not Started	Verify update channel and make adjustments if needed
Setup Corporate Templates in PowerPoint	Pre-requisites	Recommended	Not Started	Recommended so Copilot for Microsoft 365 can create branded PowerPoint decks as output
Evaluate Outlook versions and potential use of the New Outlook	Pre-requisites	Optional	Not Started	The new Outlook is recommended for integration with Copilot, but Copilot does support classic Outlook (Windows).
Activate Microsoft Loop Components in the tenant	Pre-requisites	Optional	Not Started	Activate Loop in your tenant to bring Copilot into Loop collaborative canvases
Configure meeting recording and transcription for post-meeting transcript	Pre-requisites	Optional	Not Started	Enable transcription or meeting recording to allow Copilot in Teams to reference meeting content after a meeting has ended.
Configure OneDrive and SharePoint default sharing policies	Security, governance, and data access requirements	Required	Not started	Verify and configure OneDrive and SharePoint default sharing policies
Configure SharePoint Restricted Search	Security, governance, and data access requirements	Optional	Not Started	Recommend as temporary workaround when assessment revealed that the business has high risk sensitivity and a longer pathway to label and categorize data. Copilot for Microsoft 365 can already be used while in parallel the risks with regards to data access and oversharing can be mitigated.
Control access to sites and block downloads	Security, governance, and data access requirements	Optional	Not Started	Set restricted access control and block file download policies on business-critical sites
Identify and manage inactive sites	Security, governance, and data access requirements	Optional	Not Started	Identify inactive sites, then restrict access or delete
Manage sharing controls in SharePoint	Security, governance, and data access requirements	Optional	Not Started	Review site-level sharing controls and remove "Everyone except External users" from people picker
Manage oversharing	Security, governance, and data access requirements	Optional	Not Started	Identify potentially overshared content
Decide who is authorized to conduct investigations (partner, customer, no	Security, governance, and data access requirements	Strongly recommended	Not started

Alex worked on a highly confidential project, Project Obsidian	Alex leveraged both Microsoft Copilot and unmanaged consumer AI apps for the project	Her identity was compromised due to the malicious code in the high-risk consumer AI apps	Without knowing the impact of her activities, she continued sharing sensitive data in consumer AI apps.	Project Obsidian’s information was leaked before the debut
The project owner labeled all documents with the “highly confidential” label to restrict rights to data with **Microsoft Purview**	Discover use of high-risk apps with **Microsoft Defender for Cloud Apps** and **Microsoft Defender for Business**	Detect the compromised identity and take actions (e.g., reset password, restrict access) to protect Microsoft Copilot or other critical resources with **Microsoft Entra Conditional Access**	Early intervention enabled by the **audit** trail in Microsoft Purview. Copilot prompts and response stored and responsive to **content search.**	Gain complete visibility and logs of activities to conduct investigations with **Microsoft Purview**

How Microsoft can help

Govern access and secure data in Microsoft Copilot for Microsoft 365

Discover overprivileged and risky users and mitigate access risks automatically with **conditional access controls**

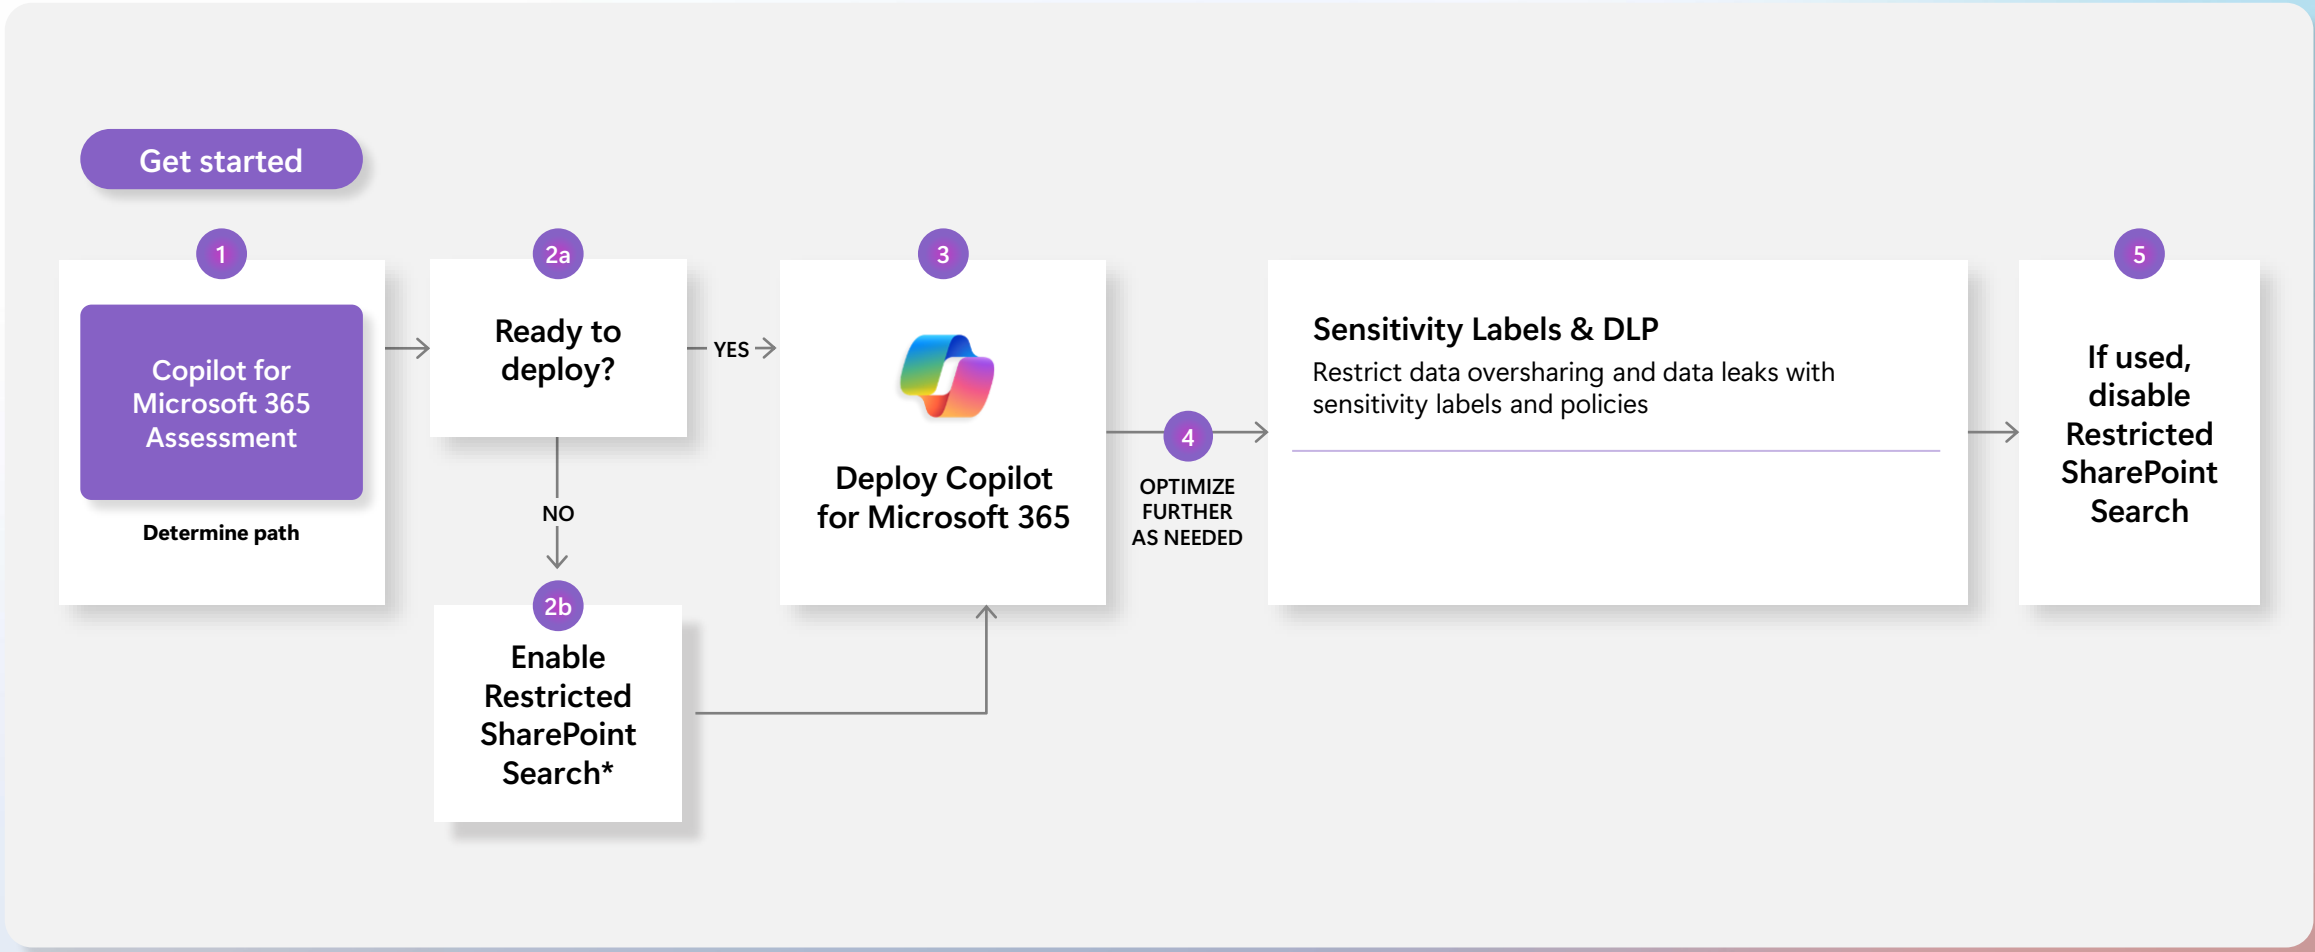

Identify and protect sensitive data consistently wherever Copilot interactions occur with **sensitivity labels**

Retain, log, and manage compliance of Copilot interactions to align with organizational policies and regulations

Apply appropriate Data Security controls

Get started quickly and continue to optimize along the way

Demo

Enable Purview Audit (Standard)

Oversharing control: Permission State Report with Actions

Gain Control Over Site Permissions and Overshared Content

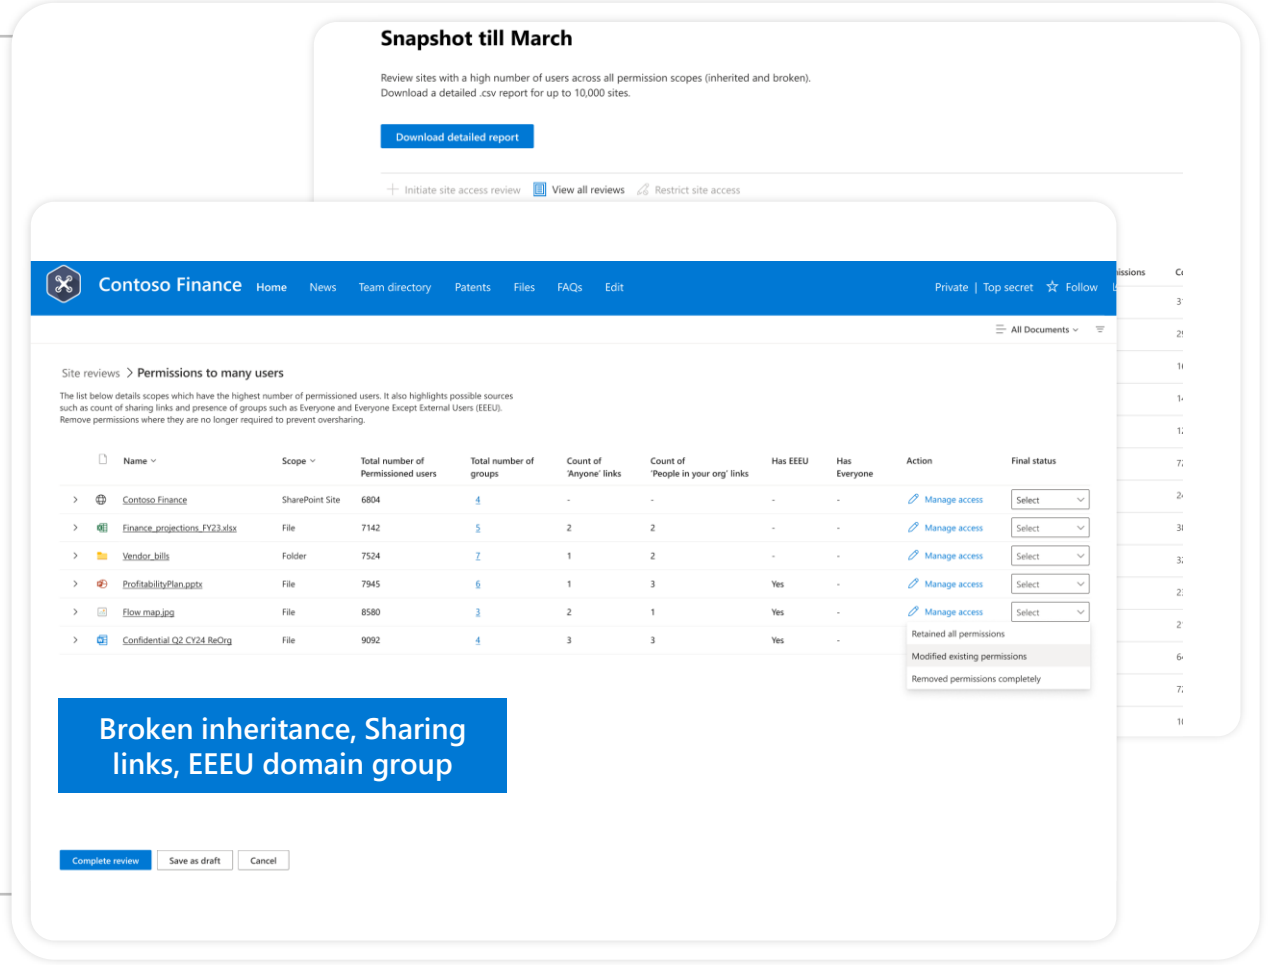

Identify Overshared content:

- Customizable and comprehensive permission reports across all sites
- Detect root causes of oversharing (broken inheritance, sharing links, EEEUs, site privacy and more)
- Focus on critical permissions by user count and extended groups
- Integrates with sensitivity labels for enhanced security
- Downloadable, with insights from AI analytics

Scalable Actions:

- Site Access Review with site owner file review dashboard
- Restricted Access Control – limit access to high-risk areas
- Restricted Content Discovery – lock down content from Copilot

Restricted Access Control (RAC)

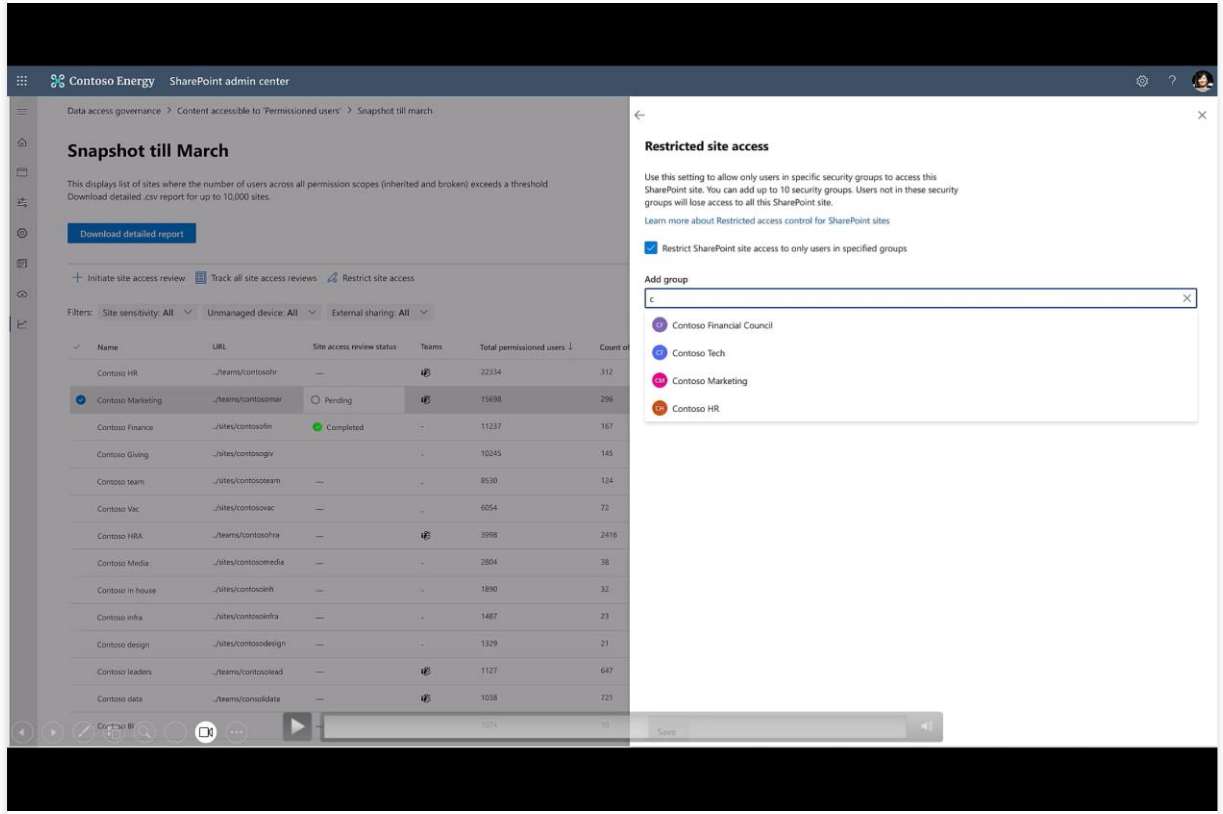

for SharePoint & OneDrive

RAC (Restricted access control) policy can be set at the site level. Even if individual files/folders have broken inheritance and over-shared, only RAC allowed users can access

Copilot honors RAC policy!

Microsoft 365 group-connected sites, Non-group SharePoint sites, Teams sites, Shared channel sites, OneDrive sites

Generally available

Snapshot till March

As of March 3, 2024

Review sites with a high number of users across all permission scopes (inherited and broken).

Microsoft deployment blueprint to address internal oversharing in Microsoft 365 Copilot

Customers with E3 Foundational

LEGEND 1 – Copilot and SharePoint Adv. Mgt. 2 – OE3/ME3

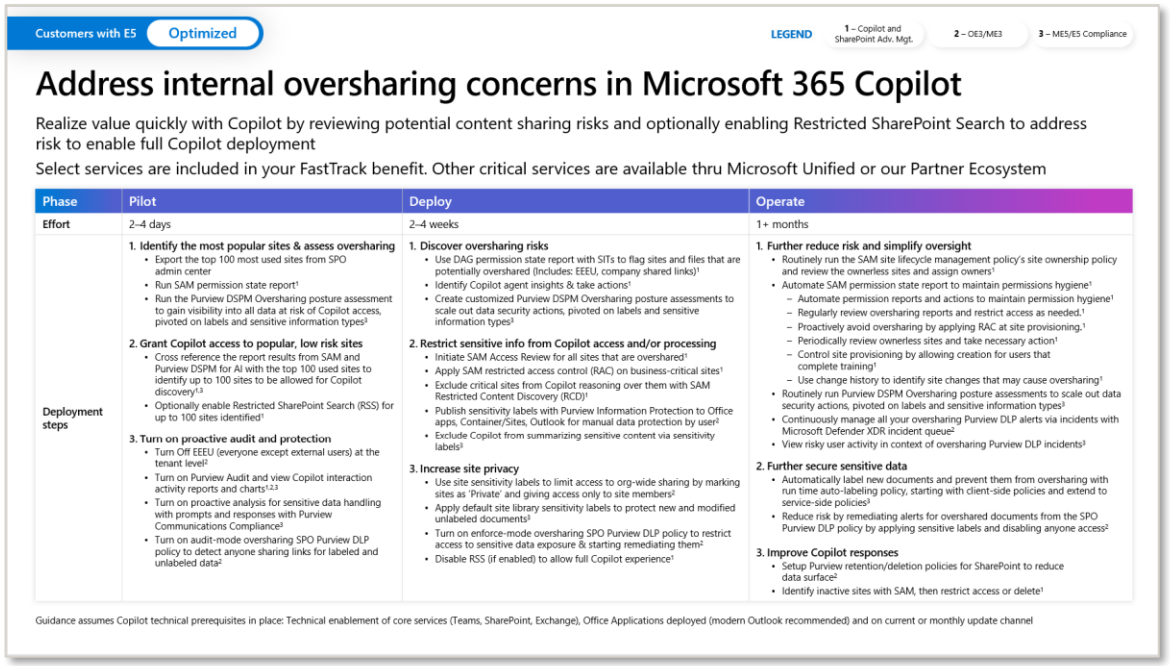

Address internal user oversharing concerns in Microsoft 365 Copilot

Realize value quickly with Copilot by reviewing potential content sharing risks and optionally enabling Restricted SharePoint Search to address risk to enable full Copilot deployment

Select services are included in your FastTrack benefit. Other critical services are available thru Microsoft Unified or our Partner Ecosystem

Phase	Pilot	Deploy	Operate
Effort	2–4 days	2–4 weeks	1+ months
Deployment steps	**1. Identify the most popular sites & assess oversharing** • Export the top 100 most used sites from SPO admin center • Run SAM permission state report[1] • Use Purview Content Explorer to view which sites contain sensitive information types (SITs)[2] **2. Grant Copilot access to popular, low risk sites** • Cross reference the report results from SAM and Content Explorer with the top 100 used sites to identify up to 100 sites to be allowed for Copilot discovery[1,2] • Optionally enable Restricted SharePoint Search (RSS) for up to 100 sites identified[1] **3. Turn on proactive audit and protection** • Turn Off EEEU (everyone except external users) at the tenant level[2] • Turn on Audit and view Copilot interaction activity reports and charts[1,2] • Turn on audit-mode oversharing SPO DLP policy to detect anyone sharing links for labeled and unlabeled data[2]	**1. Discover oversharing risks** • Use permission state report with SITs to flag sites and files that are potentially overshared (Includes: EEEU, company shared links)[1] • Identify Copilot agent insights & take actions[1] **2. Restrict sensitive info from Copilot access and/or processing** • Initiate Access Review for all sites that are overshared[1] • Apply restricted access control (RAC) on business-critical sites[1] • Exclude critical sites from Copilot reasoning over them[1] **3. Increase site privacy** • Publish labels to Office apps, Container/Sites, Outlook for manual data protection by user[2] • Use site labels to limit access to org-wide sharing by marking sites as 'Private' and giving access only to site members[2] • Turn on enforce-mode oversharing SPO DLP policy to restrict access to sensitive data exposure & starting remediating them[2] • Disable RSS (if enabled) to allow full Copilot experience[1]	**1. Further reduce risk and simplify oversight** • Routinely run the SAM site lifecycle management policy's site ownership policy and review the ownerless sites and assign owners[1] • Automate SAM permission state report to maintain permissions hygiene[1] – Automate permission reports and actions to maintain permission hygiene[1] – Regularly review oversharing reports and restrict access as needed[1] – Proactively avoid oversharing by applying RAC at site provisioning[1] – Periodically review inactive sites and take necessary action[1] – Control site provisioning by allowing creation for users that complete training[1] – Use change history to identify site changes that may cause oversharing[1] • Continuously manage all your oversharing DLP alerts via the Microsoft Purview Portal[2] **2. Secure Copilot responses** • Reduce risk by remediating alerts for overshared documents from the SPO DLP policy and applying sensitive labels[2] **3. Improve Copilot responses** • Setup retention/deletion policies for SharePoint to reduce data surface[2] • Identify inactive sites, then restrict access or delete[1]

Guidance assumes Copilot technical prerequisites in place: Technical enablement of core services (Teams, SharePoint, Exchange), Office Applications deployed (modern Outlook recommended) and on current or monthly update channel

Customers with E5 Optimized

LEGEND 1 – Copilot and SharePoint Adv. Mgt. 2 – OE3/ME3 3 – ME5/E5 Compliance

Address internal oversharing concerns in Microsoft 365 Copilot

Realize value quickly with Copilot by reviewing potential content sharing risks and optionally enabling Restricted SharePoint Search to address risk to enable full Copilot deployment

Select services are included in your FastTrack benefit. Other critical services are available thru Microsoft Unified or our Partner Ecosystem

Phase	Pilot	Deploy	Operate
Effort	2–4 days	2–4 weeks	1+ months
Deployment steps	**1. Identify the most popular sites & assess oversharing** • Export the top 100 most used sites from SPO admin center • Run SAM permission state report[1] • Run the Purview DSPM Oversharing posture assessment to gain visibility into all data at risk of Copilot access, pivoted on labels and sensitive information types[3] **2. Grant Copilot access to popular, low risk sites** • Cross reference the report results from SAM and Purview DSPM for AI with the top 100 used sites to identify up to 100 sites to be allowed for Copilot discovery[1,3] • Optionally enable Restricted SharePoint Search (RSS) for up to 100 sites identified[1] **3. Turn on proactive audit and protection** • Turn Off EEEU (everyone except external users) at the tenant level[2] • Turn on Purview Audit and view Copilot interaction activity reports and charts[1,2,3] • Turn on proactive analysis for sensitive data handling with prompts and responses with Purview Communications Compliance[3] • Turn on audit-mode oversharing SPO Purview DLP policy to detect anyone sharing links for labeled and unlabeled data[2]	**1. Discover oversharing risks** • Use DAG permission state report with SITs to flag sites and files that are potentially overshared (Includes: EEEU, company shared links)[1] • Identify Copilot agent insights & take actions[1] • Create customized Purview DSPM Oversharing posture assessments to scale out data security actions, pivoted on labels and sensitive information types[3] **2. Restrict sensitive info from Copilot access and/or processing** • Initiate SAM Access Review for all sites that are overshared[1] • Apply SAM restricted access control (RAC) on business-critical sites[1] • Exclude critical sites from Copilot reasoning over them with SAM Restricted Content Discovery (RCD)[1] • Publish sensitivity labels with Purview Information Protection to Office apps, Container/Sites, Outlook for manual data protection by user[2] • Exclude Copilot from summarizing sensitive content via sensitivity labels[3] **3. Increase site privacy** • Use site sensitivity labels to limit access to org-wide sharing by marking sites as 'Private' and giving access only to site members[2] • Apply default site library sensitivity labels to protect new and modified unlabeled documents[3] • Turn on enforce-mode oversharing SPO Purview DLP policy to restrict access to sensitive data exposure & starting remediating them[2] • Disable RSS (if enabled) to allow full Copilot experience[1]	**1. Further reduce risk and simplify oversight** • Routinely run the SAM site lifecycle management policy's site ownership policy and review the ownerless sites and assign owners[1] • Automate SAM permission state report to maintain permissions hygiene[1] – Automate permission reports and actions to maintain permission hygiene[1] – Regularly review oversharing reports and restrict access as needed.[1] – Proactively avoid oversharing by applying RAC at site provisioning.[1] – Periodically review ownerless sites and take necessary action[1] – Control site provisioning by allowing creation for users that complete training[1] – Use change history to identify site changes that may cause oversharing[1] • Routinely run Purview DSPM Oversharing posture assessments to scale out data security actions, pivoted on labels and sensitive information types[3] • Continuously manage all your oversharing Purview DLP alerts via incidents with Microsoft Defender XDR incident queue[2] • View risky user activity in context of oversharing Purview DLP incidents[3] **2. Further secure sensitive data** • Automatically label new documents and prevent them from oversharing with run time auto-labeling policy, starting with client-side policies and extend to service-side policies[3] • Reduce risk by remediating alerts for overshared documents from the SPO Purview DLP policy by applying sensitive labels and disabling anyone access[2] **3. Improve Copilot responses** • Setup Purview retention/deletion policies for SharePoint to reduce data surface[2] • Identify inactive sites with SAM, then restrict access or delete[1]

Guidance assumes Copilot technical prerequisites in place: Technical enablement of core services (Teams, SharePoint, Exchange), Office Applications deployed (modern Outlook recommended) and on current or monthly update channel

Sensitivity labels span your entire data estate

They are a representation of your information taxonomy.

They describe the priority assigned to your categories of sensitive information.

Content labels

Applied to: Office apps, Power BI reports, Azure Data

Protections: Encryption and visual markings

Container labels

Applied to: SharePoint sites, Teams channels, Microsoft 365 groups

Protections: Access control, privacy settings, conditional access

Powerful controls that ensure labels are applied where needed

Apply labels by default, make them mandatory, prevent label downgrades

Security and compliance value for Copilot for M365 in Business Standard and Business Premium

	Scenario	Business Standard	Business Premium
Identity & access management	Login to Copilot for Microsoft 365 with a single identity	•	•
	Enforce MFA when accessing Microsoft 365 to use Copilot	Basic MFA	•
	Enable end-user password reset, change, and unlock when accessing Microsoft 365	Cloud only	•
	Implement Conditional Access policies based on identity, device, and location when accessing Microsoft 365 to use Copilot		•
	Enable near real-time access policies enforcement, evaluate critical events, and immediately revoke access to Microsoft 365		•
	Require employees or guests to accept terms of use policy before getting access		•
Endpoint management	Push/deploy Microsoft 365 apps to devices and grant access to Copilot in those apps		•
	Manage Microsoft 365 app updates		•
	Restrict the use of Microsoft 365 apps and Teams – as well as Copilot in those apps – on personal devices		•
	Prevent saving files – including those generated by Copilot – to unprotected apps		•
	Wipe all work content – including content generated by Copilot – if a device is lost, stolen or compromised	•	•
	Revoke work access on noncompliant devices	Except Windows	•
Data security & compliance	Search for Copilot generated data by content, keyword search, apply legal hold, and export the search results; investigate incidents related to Copilot and respond to litigations	Content, keyword search, and export only	Standard
	Audit logs for Copilot interactions	Standard	Standard
	Apply a retention or deletion policy for Copilot interactions	•	•
	Data Loss Prevention policies to protect sensitive data, generated by Copilot and saved in Microsoft 365 locations, from exfiltration		Files & email
	Prohibit Copilot from summarizing or including data that users have no extract permissions in its response messages for the said users		•
	Exclude sensitive files that users have no view permission from being processed by Copilot for the said users	•	•

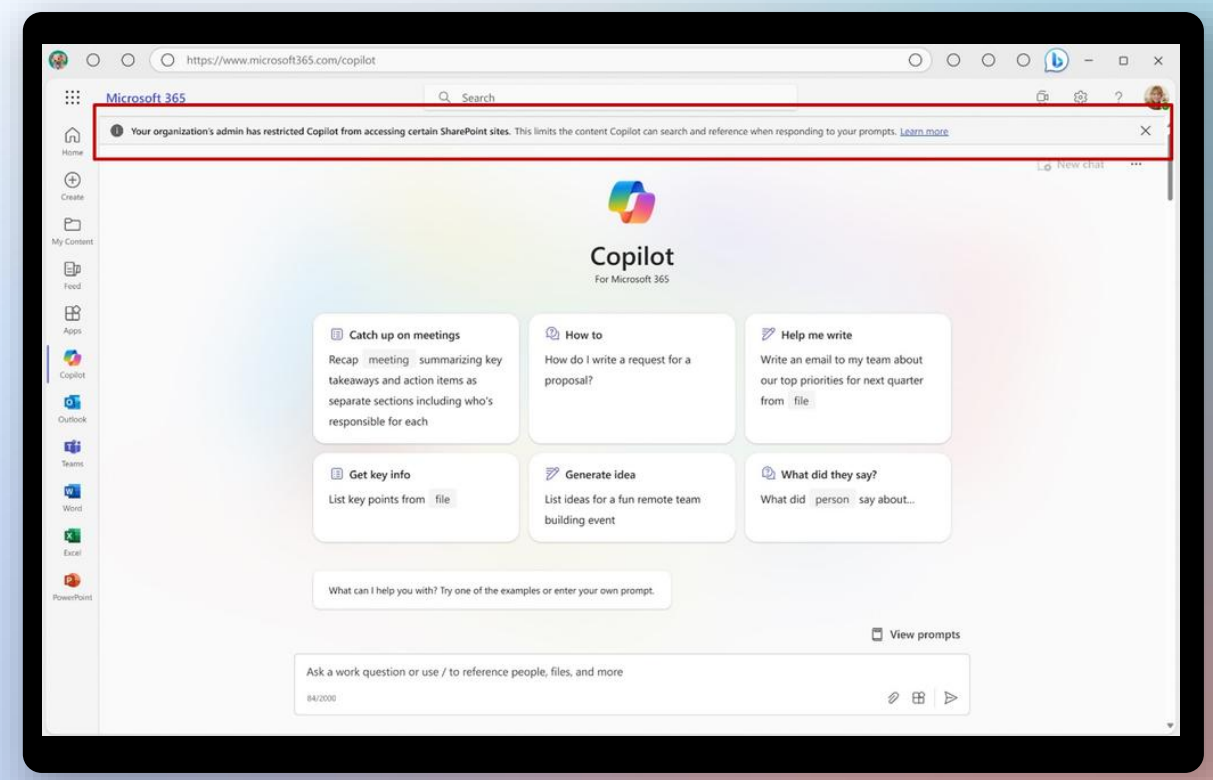

Introducing Restricted SharePoint Search to help you get started with Copilot for Microsoft 365

Restricted SharePoint Search allows you to **disable organization-wide search, and to restrict both Enterprise Search and Copilot experiences** to a curated set of SharePoint sites of your choice.

If you decide to enable it Copilot and non-Copilot users will be able to find and use content from:

- **An allowed list of curated SharePoint sites set** up by admins (with up to 100 SharePoint sites), honoring sites' existing permissions
- **Content from their frequently visited** SharePoint sites
- **Users' OneDrive files, chats, emails, calendars** they have access to
- **Files that were shared directly** with the users
- **Files that the users** viewed, edited, or created

Restricted SharePoint Search is off by default

Restricted SharePoint Search

Expected general availability: H1 CY2024

This is intended as a temporary solution to give you time to review and audit site permissions, while implementing robust data security solutions from Microsoft Purview and content management with SharePoint Advanced Management.

Restricted SharePoint Search is designed for organizations particularly concerned about unintentional oversharing of content

When enabled, Copilot experiences and organization-wide search are limited to a select set of SharePoint sites, as well as the individual user's files and content

PREREQUISITES

- Available to tenants with Copilot for Microsoft 365 subscriptions
- Activation requires Global/Tenant/SharePoint admin rights

IMPACT

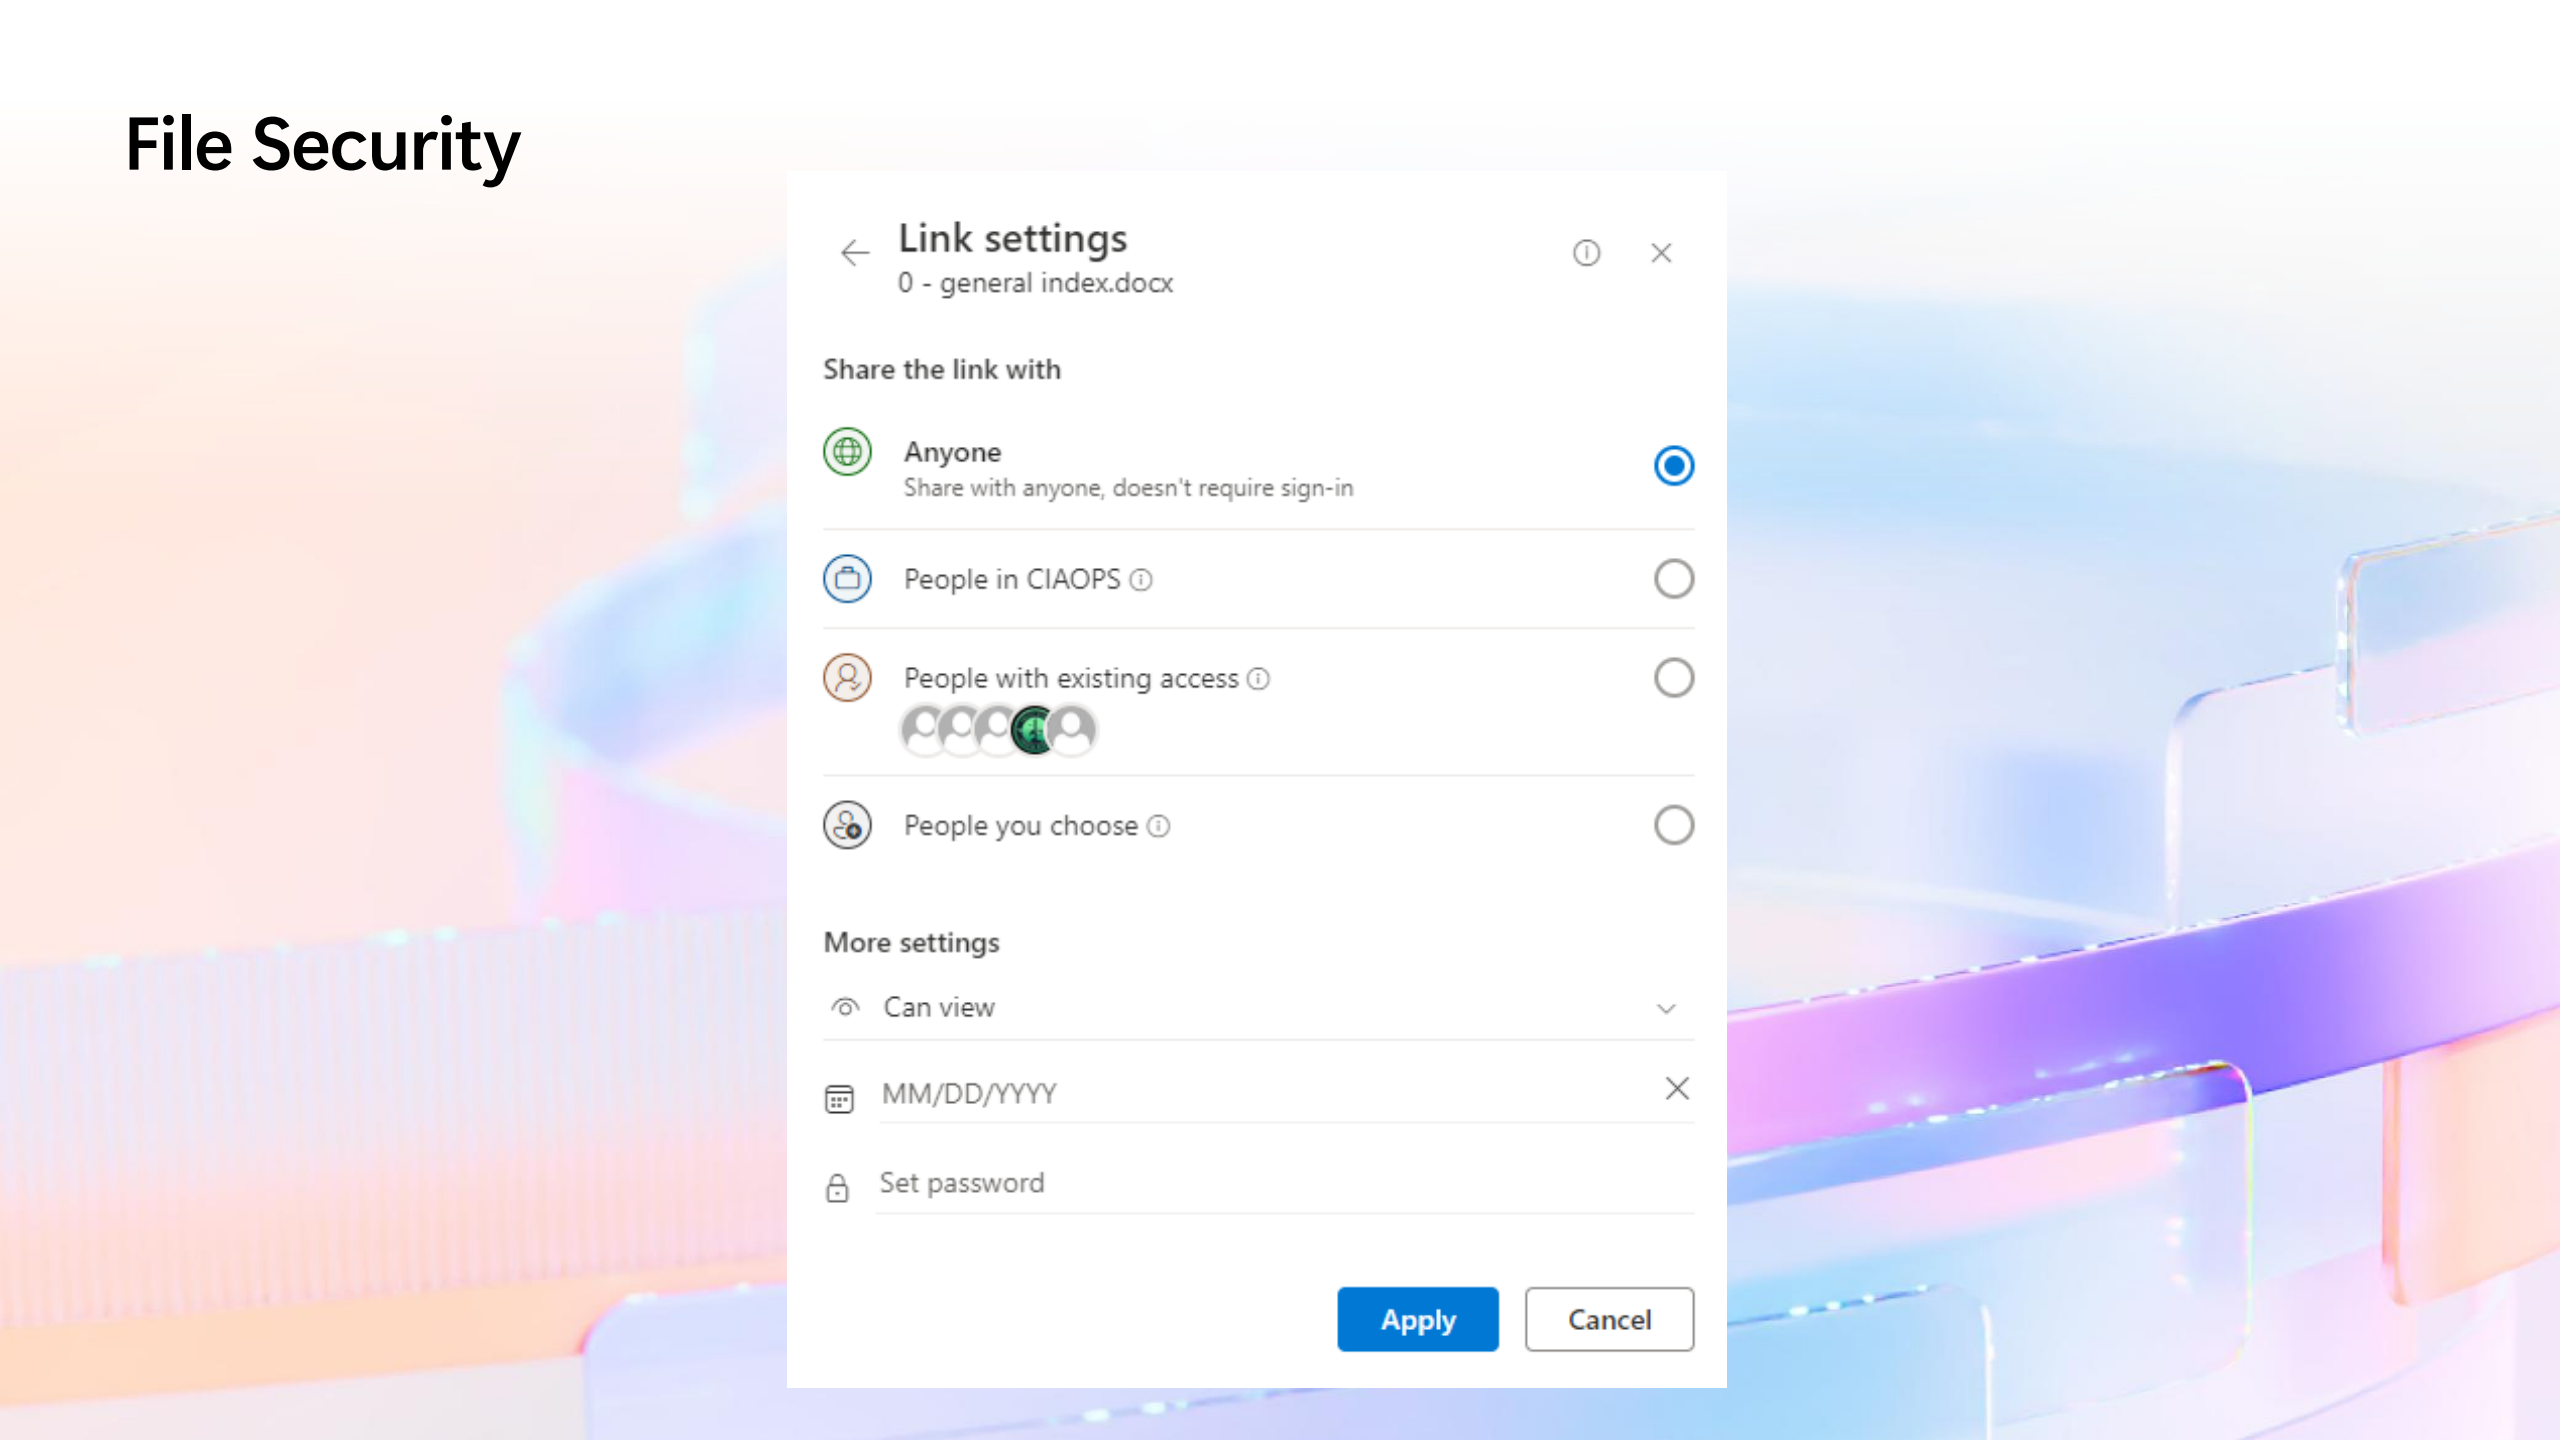

Restricted SharePoint Search disables organization-wide search, while allowing you to select sites that you trust. This means users in your organization can use Copilot to reason over:

- An allowed list of curated SharePoint sites set up by admins (up to 100 SharePoint sites), honoring existing permissions on a site
- Users' OneDrive for Business, chats they are part of, emails they send and receive, calendars to which they have access, etc.
- Files that are shared with, and accessed by users
- Content from users' frequently visited sites

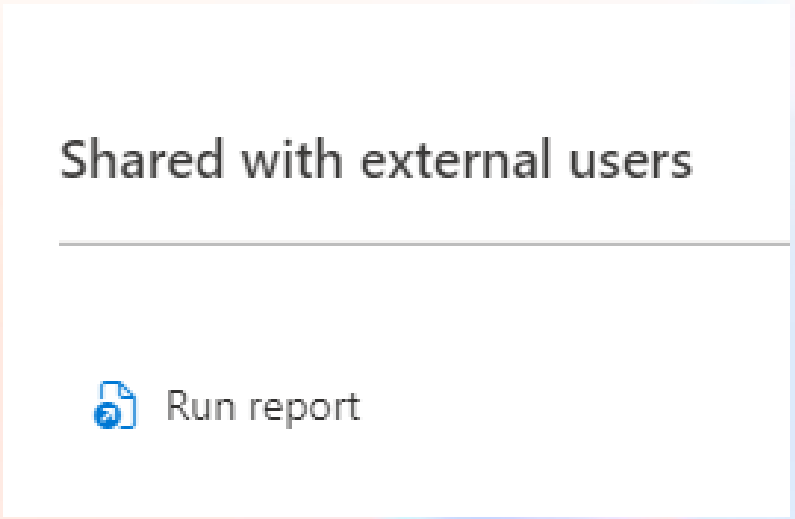

Turning on Restricted SharePoint Search does not affect the site's index or associated DLP and labeling policies.

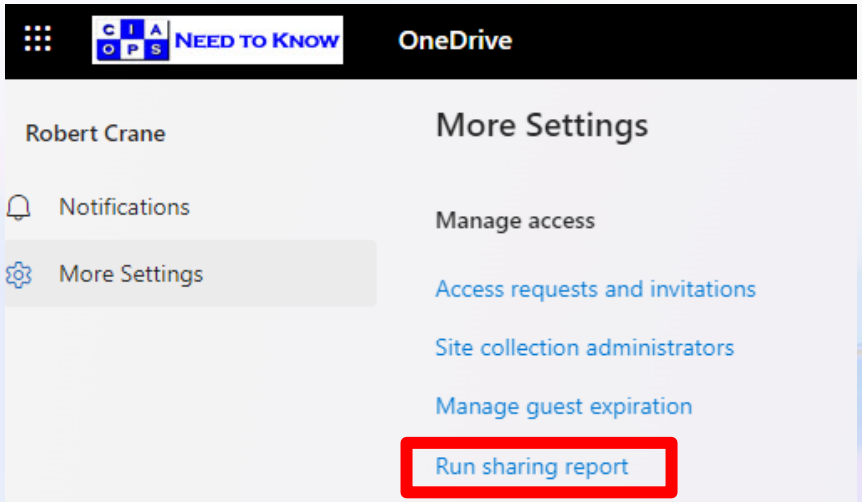

Access this blog for more info.

File activity

Onboard & engage

Prepare customer tenant for Copilot for Microsoft 365

Onboard & engage: Deploy apps/configure channel

Deploy Microsoft 365 apps to Business Users

Deploy required apps

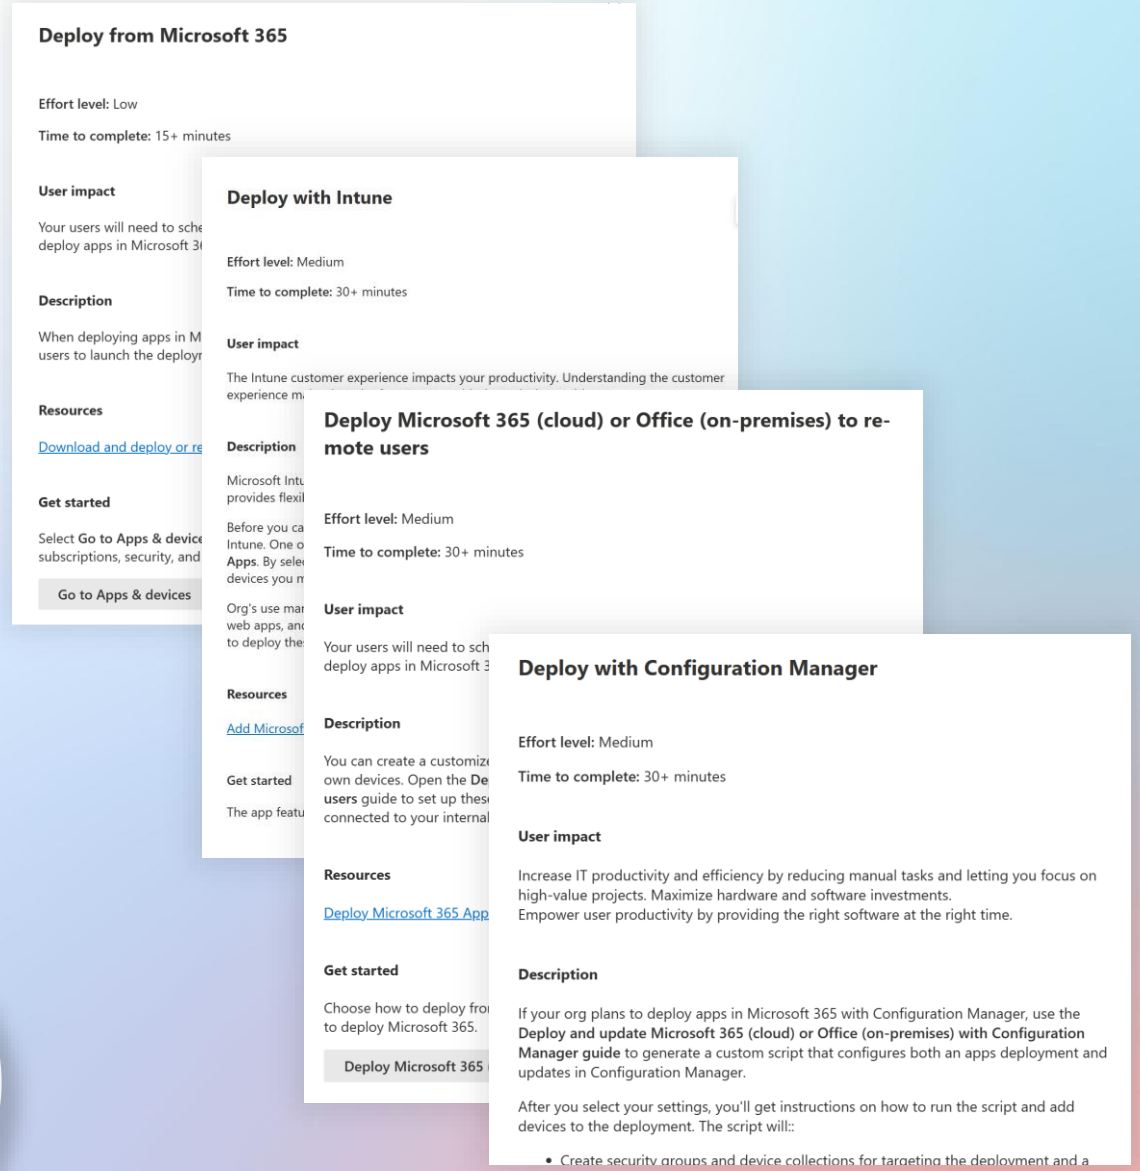

To seamlessly integrate with Microsoft Copilot for Microsoft 365, you are required to deploy the following applications for your users:

- Word, Excel, PowerPoint, new Outlook for Windows
- Microsoft Teams, OneDrive, SharePoint, Exchange

Configure Channel

To use Copilot for Microsoft 365, Microsoft 365 apps must run on Current Channel or Monthly Enterprise Channel. Follow this guidance to configure the default update channel. Support options are available to help you make the most of Copilot for Microsoft 365*!

- Develop a list of users who will receive apps
- Map the users to the apps
- Deploy apps using the built-in tool in admin center or customer's preferred method. For additional information, watch these videos on how to deploy Microsoft 365 apps
- For more information on the implementation process, please see Deployment guide for Microsoft 365 apps

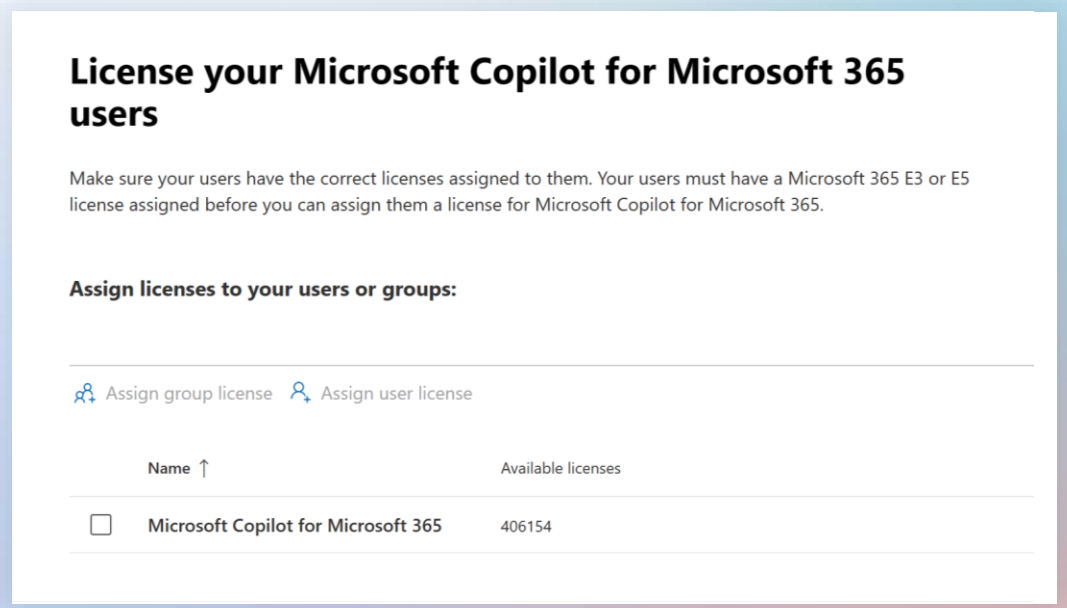

***Note:** Engage your Microsoft Account Technical Specialist (ATS) or Customer Success Account Manager (CSAM) to discuss the support options available to you.

Onboard & engage: Assign licenses

License your Business Users

Assign licenses

Based on the results of the Optimization Assessment and scenario discovery, the appropriate licenses need to be assigned to the select set of end users.

Based on the adoption plan, develop a list of users who will receive the licenses first. A few data points to keep in mind:

1. Analyze departments with the highest Microsoft 365 usage data, and based on that analysis start enabling entire teams within Marketing, Sales, or HR
2. Use the Scenario Library to identify top use cases and the key metrics you would like to improve in your functional area

Use the setup guide to assign required licenses to users or customer's preferred method. You can assign and unassign licenses for users on the Licenses page under the Active users page.

Onboard & engage: Setup guide

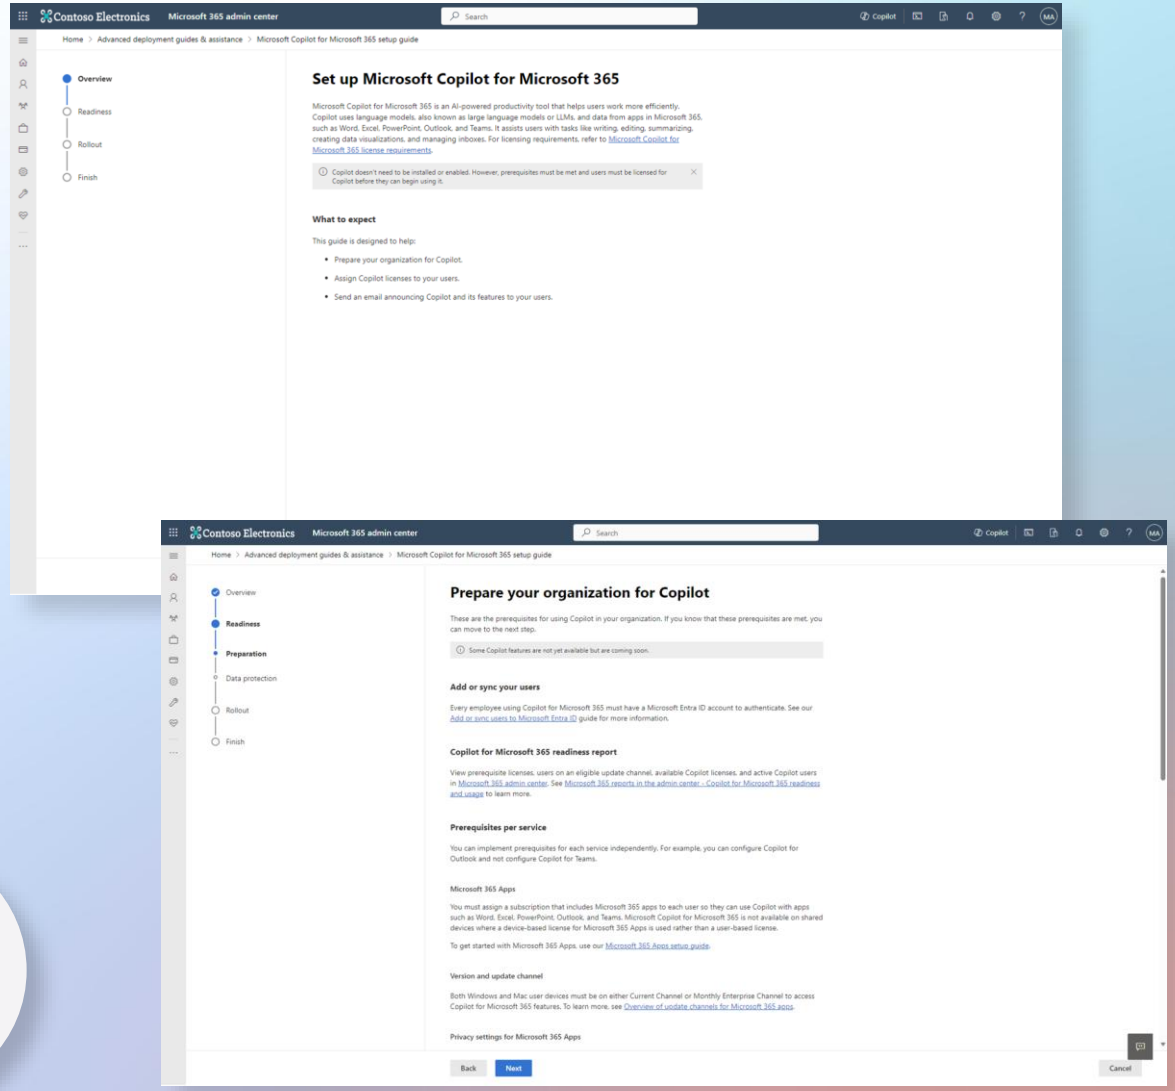

Set up Copilot for Microsoft 365

Use the new Microsoft 365 Copilot setup guide, a wizard-based experience in the Microsoft 365 admin center, to help prepare your organization for Copilot for Microsoft 365:

Review the list of prerequisites and make sure they are met for your organization

Assign licenses to your users or groups

Promote Microsoft 365 Copilot features to your users with the email announcement template provided in the setup wizard

- Find this wizard in the admin center > Home > Setup page >
- Apps and Email > Get ready for Microsoft 365 Copilot

Demo
