Large Language Models (LLMs)

Fine-tuning LLMs for Specialized Tasks

LLMs can be fine-tuned on specific datasets to perform specialized tasks

Fine-tuning process allows LLMs to become more accurate in domain-specific areas

What is GitHub Copilot?

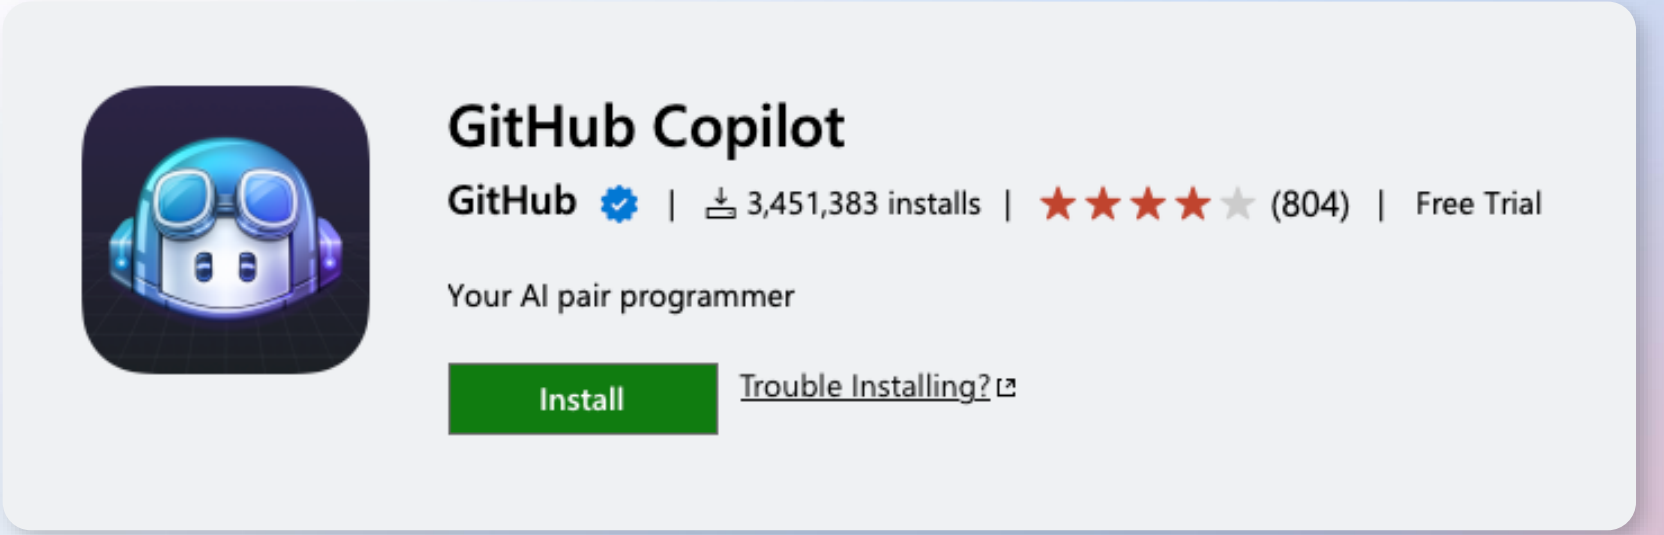

The brand name of GitHub's AI for developers

Available for many editors and as an extension for VS Code

Currently powered by OpenAI's Codex model

COST

- 10$ per month (first 2 months free)
- Free for verified students, teachers, and maintainers of large open-source projects (link)

Demo

Why is prompt engineering important?

Prompt engineering is a critical skill for anyone working with LLM AI models

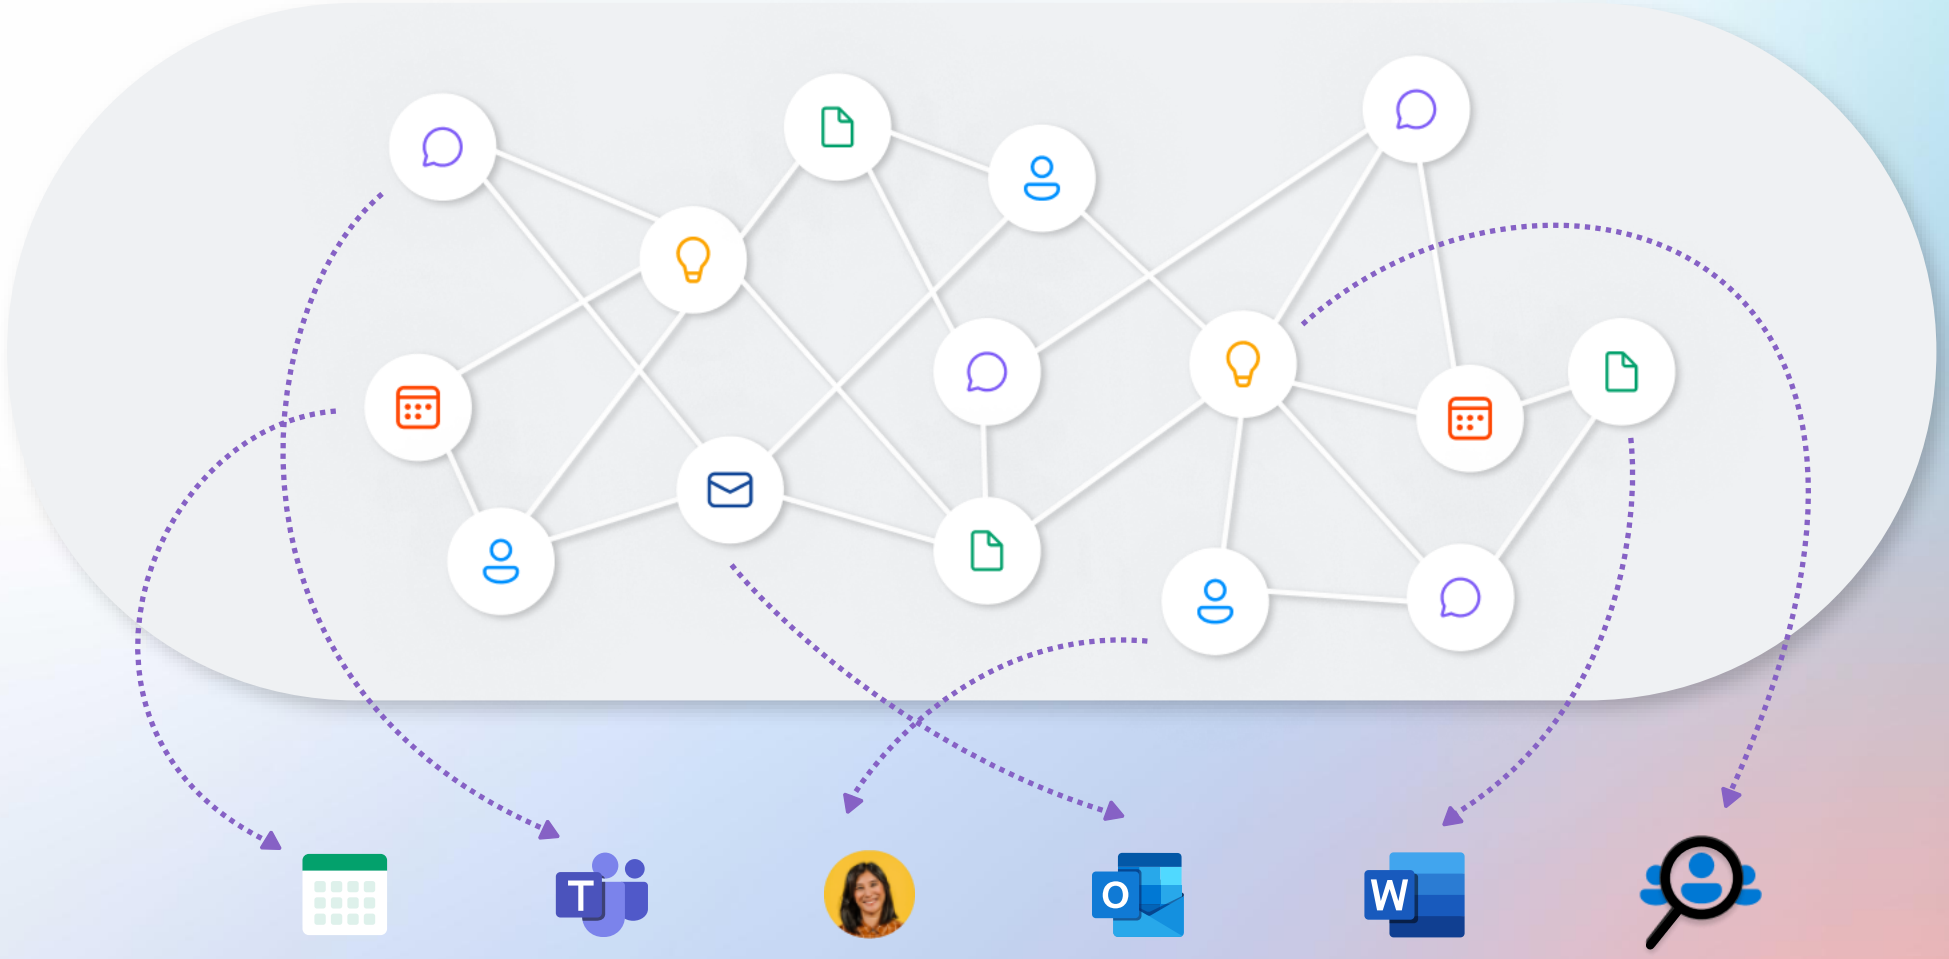

A good prompt produces the desired outputs

Improvements you can perform to make the results more predictable:

- Make the prompt more specific
- Add structure to the output with formatting
- Provide examples with few-shot prompting
- Tell the AI what to do to avoid doing something wrong
- Provide context to the AI
- Using message roles in chat completion prompts
- Give your AI words of encouragement

Choose the plan that fits your business

For the best value and to simplify purchasing, we're taking it even further to help get you started by bundling Copilot Business with qualifying Microsoft 365 Business plans. Choose the best plan for your team:

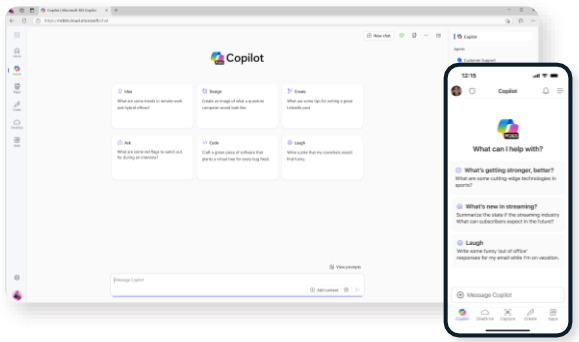

- **Microsoft 365 Business Basic and Microsoft 365 Copilot Business**. Get the essential web and mobile AI-powered apps your team needs to run your business with confidence, so you can make faster, more informed decisions.
- **Microsoft 365 Business Standard and Microsoft 365 Copilot Business**. Everything in Business Basic, plus the full suite of desktop Office 365 apps as a single, integrated solution, for a more complete work experience from any device, anywhere.
- **Microsoft 365 Business Premium and Microsoft 365 Copilot Business**. Everything in Business Standard along with the comprehensive security features and device management tools to protect your team and your customers as your business grows.

These bundles will be available on both Microsoft.com and through Microsoft Partners beginning December 1, 2025.

Announced on Jan 16, 2024

Copilot for Microsoft 365 now available in CSP for customers of all sizes

Channel	All channels (EA, CSP, Direct)
Pre-reqs	Business Standard, Business Premium, Office 365 A3/A5* and E3/E5 Microsoft 365 A3/A5* and E3/E5
Order size	No minimum license purchase size requirements. A customer cannot purchase more licenses of the Copilot add-on than the collective sum of their prerequisite SKUs.

*Customers with Academic SKUs are not currently eligible to purchase Copilot for Microsoft 365 through CSP. They are only available through Enrollment for Education Solutions (EES). We plan to gradually extend access and more details will be shared in the coming months.

Prerequisites for using Copilot for Microsoft 365

Contoso Life uses Microsoft 365 Business Premium today, they already meet most of these prerequisites.

Microsoft 365 Apps for enterprise

Microsoft Entra ID

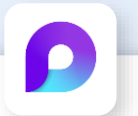

Microsoft OneDrive

Microsoft Outlook

Microsoft Teams

Microsoft Loop

Microsoft Whiteboard

Technical requirements for Copilot for Microsoft 365

- Microsoft 365 E3 or E5
  Microsoft 365 Business Premium or Business Standard
- Microsoft Entra ID account (Entra ID)[1]
- Some features (file restore, management, etc.) require a OneDrive account
- WebSockets (wss://) allowed to endpoints in ID #46 in the section for Microsoft 365 Common and Office Online
- Word, Excel, and PowerPoint: first available in web versions and later in Desktop (Current Channel)
- Outlook: Users need to be using the new Outlook for Windows or MacOS
- Teams: Users must be using Teams desktop or the web app. Both current and new versions of Teams supported[2]
- Loop: Tenants must have Loop enabled. Learn more how to enable Loop. Manage Loop Workspaces.
- Cross-app experience depends on indexed data; tenants with the richest data get the best results

Please note this is an early version of the technical requirements for Copilot for Microsoft 365 EAP and subject to change
[1]Currently there is no obstacle to a hybrid solution such as using AAD as well a third-party single sign-on solution (e.g., Okta)
[2]Once Business Chat is configured in the Teams desktop client, users can access it in the mobile client.

Embedded across Microsoft 365 apps

Impact by Workflow

Effective meetings

- Quickly catch up on meetings you missed
- Summarize a meeting and identify next steps
- Run a more effective meeting

Data analysis

- Get answers from across all your data
- Instantly uncover key insights
- Create powerful and professional visualizations

Content creation

- Jumpstart creativity, and write and edit like a pro
- Quickly catch up on the key points of a document or presentation
- Create documents, presentations, charts, and tables

Email processing

- Draft email replies instantly
- Personalize the tone and length even on the go
- Quickly summarize a long email thread

Impact by Function

HR

- Communicate policies and draft job descriptions
- Create stunning training materials
- Easily respond to job applicants' or employees' emails

Marketing

- Identify relevant market trends and segments
- Create the first draft for a project
- Summarize campaign results with powerful visuals

Sales

- Have better sales conversations and close more deals
- Create sales presentations and proposals
- Analyze sales data from previous quarters

IT

- Create a project plan for a product roll-out
- Stay up to date on various project calls and chats
- Identify patterns in data and solve issues faster

Finance

- Simplify financial reporting and planning
- Identify performance improvements
- Report metrics using professional charts

We had a similar issue last year when another competitor lowered prices. I remember a document was written where we explored possible actions we could take. What were those actions?

I found the document titled Market Strategy 2023 that outlines the actions considered when a competitor lowered prices last year. Here are the three strategic options that were explored:

1. **Price Reduction**: This option involved reducing our product prices by 15% to match or undercut the competitor. The goal was to maintain market share by making our products more attractive to price-sensitive customers. This strategy required a comprehensive market analysis to understand the competitor's pricing and identify the optimal price point for our products. Additionally, it involved reviewing and potentially reducing operational costs to maintain profitability despite the reduced prices. This included negotiating with suppliers to reduce material costs, optimizing production processes, and reducing overheads [1] [2].

2. **Promotional Offers**: Another option was to introduce promotional offers to attract customers without permanently lowering prices. This could include limited-time discounts, bundling products with additional services or accessories, and offering loyalty rewards. The idea was to provide added value to customers and incentivize purchases while maintaining the perceived value of our products [1] [2].

3. **Advertising Campaign**: The third option was to launch an advertising campaign to highlight the unique features and benefits of our products compared to the competitor's offerings. This strategy aimed to reinforce the value proposition of our products and differentiate them in the market. The campaign would focus on the superior quality, innovative features, and long-term benefits of our products to justify the premium pricing [1] [2].

These strategies were designed to address the competitive pricing challenge and maintain our market position. Would you like to discuss any of these options in more detail or explore new strategies for the current situation?

The Microsoft Graph

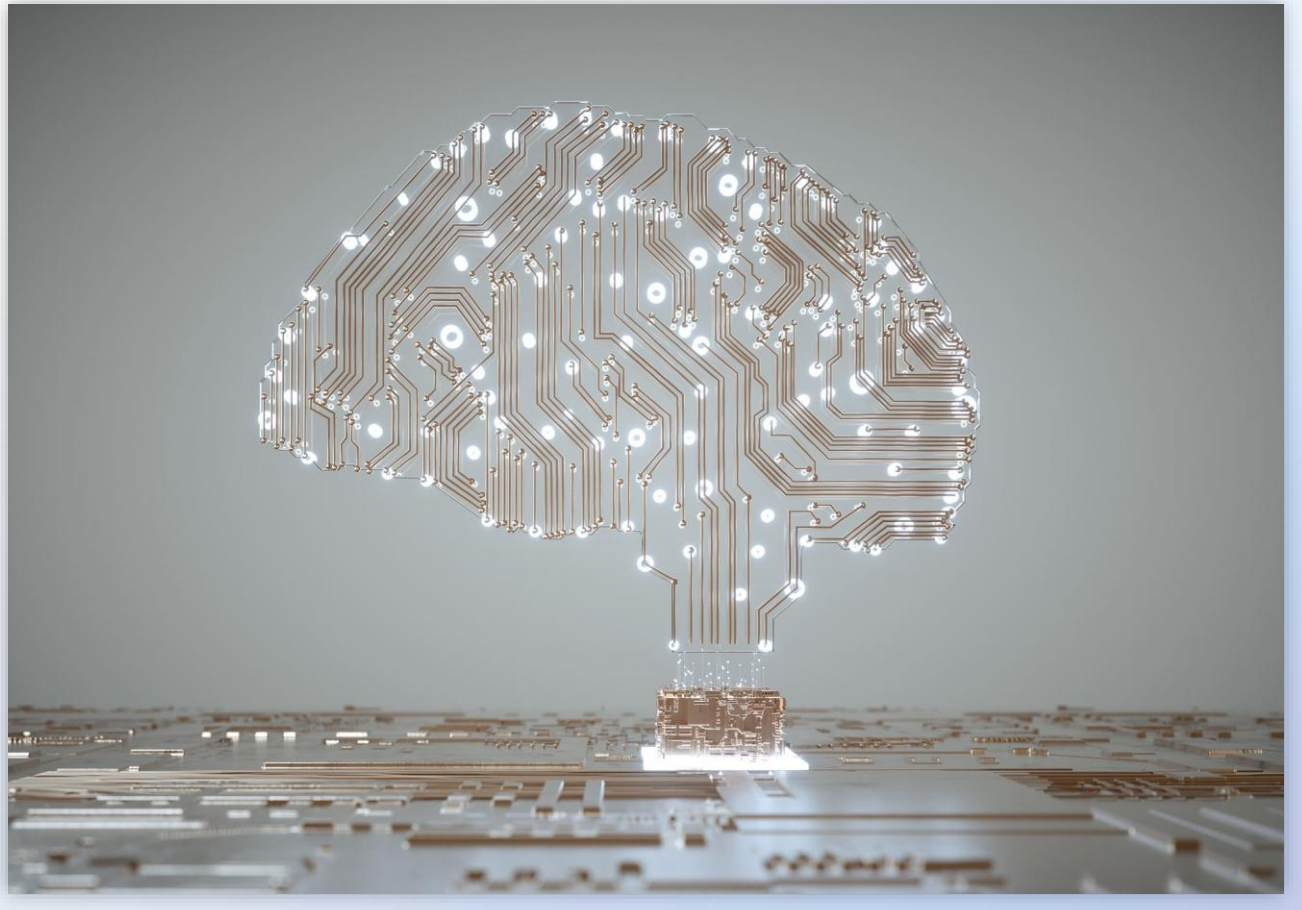

The Microsoft Graph is the **gateway to data and intelligence in Microsoft 365**. The Graph uses a unified programmability model to access data across Microsoft Cloud Services including Microsoft 365 core services, Enterprise Mobility + Security, Windows services, and Dynamics Business Central

- **Graph API** - single endpoint for real-time access to internal data
- **Graph Connectors** - delivers external data to the Microsoft graph (e.g. Salesforce, Jira, etc)
- **Graph Data Connect** – Secure and scalable bulk data access to the Azure AI platform to enable insights and analytics

Semantic Index

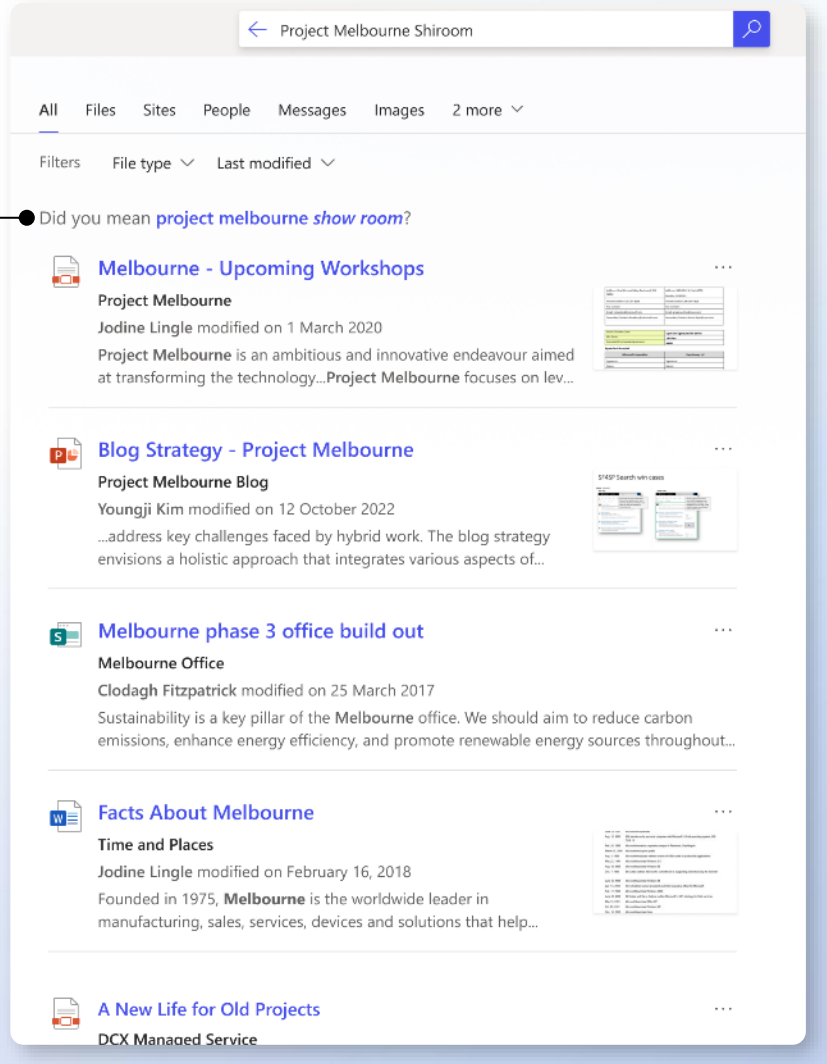

The semantic index **sits on top of the Microsoft Graph** to interpret user queries and to produce sophisticated, meaningful, and multilingual responses that help you to be more productive.

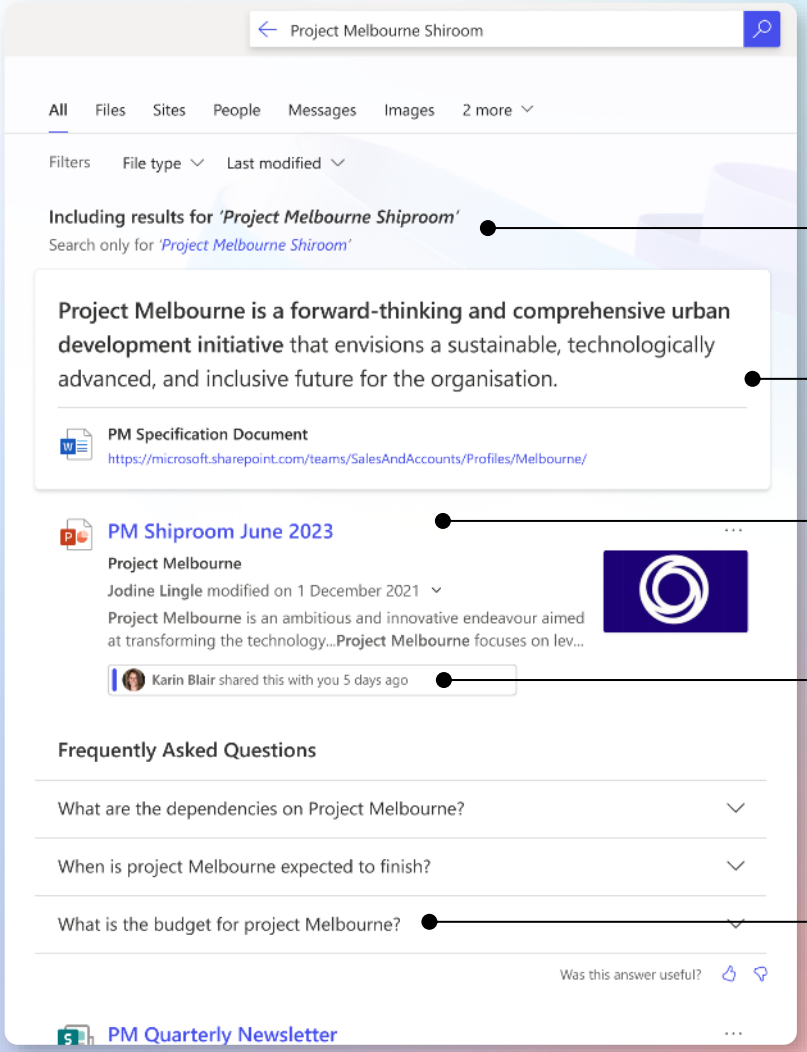

- Technology that powers the search functionality in Copilot for Microsoft 365
- Uses artificial intelligence and natural language processing to understand the meaning behind the words used in search queries, allowing for more accurate and efficient search results
- Able to recognize synonyms, related concepts, and other factors that can help refine search results, making it easier for users to find the information they need

Semantic Index for Microsoft 365

The Copilot and Business Premium Get AI Ready building Blocks

Microsoft Copilot

AI-powered chat with commercial data protection

Business data is protected

User and business data is protected and will not leak outside the organization.

Chat data is not saved

Chat data is not saved, and no one at Microsoft can view customer data.

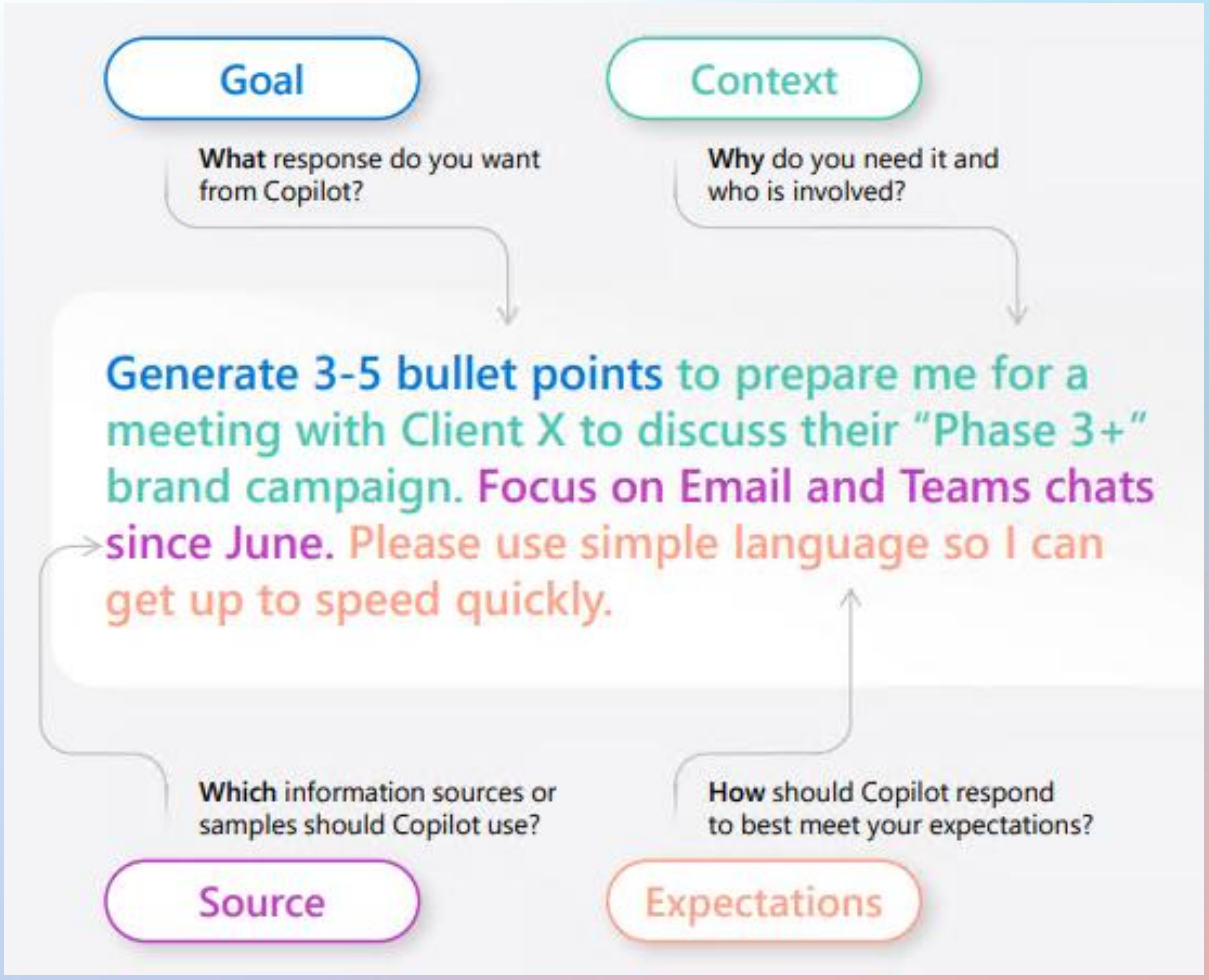

Data is not used to train the model

Chat data is not used to train the Large Language Models used by AI.

Use prompts to get started with Copilot for Microsoft 365

Use prompts to create, summarize, edit or transform. It's like having a conversation with Copilot.

Microsoft WorkLab Work Trend Index, May 2023

Copilot Extensibility

Plugin types

Use existing integrations or build new ones to extend your organization's AI-powered skills.

Teams Message Extensions

Message extensions allow users to interact with a web service through buttons and forms in the Microsoft Teams, Outlook, and Microsoft 365 app clients.

Power Platform Connectors

A proxy or a wrapper around an API that allows users to leverage a set of prebuilt actions and triggers to build their apps and workflows.

Open AI Plugins

Open AI plugins connect ChatGPT to APIs, enabling it to perform actions like browsing and interacting with websites and games.

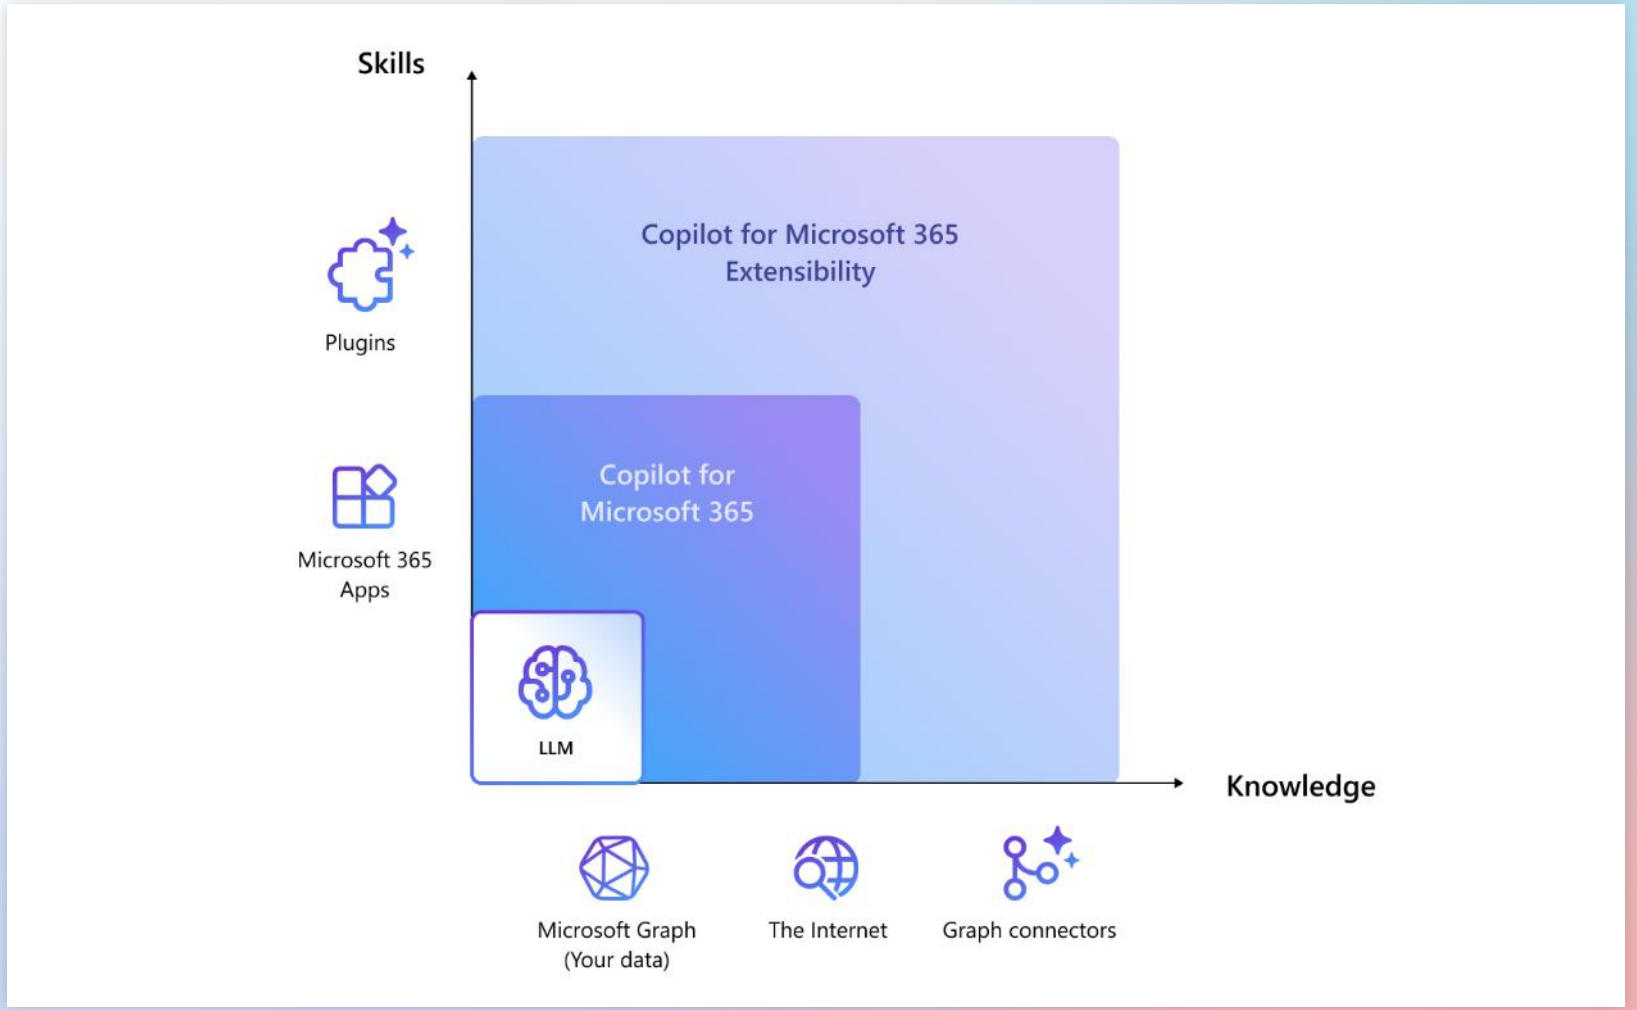

Existing Investments

New

Extend Microsoft Copilot for Microsoft 365

- Enrich the data estate of your enterprise with industry-leading AI.
- Keep your users in the flow of their work, start to finish.
- Inherit world-class security, compliance, and privacy policies

Copilot Customization

Introducing

Copilot Studio

Customize Copilot for Microsoft 365

Enable greater control and efficiency by authoring responses to predictable scenarios within Copilot for Microsoft 365.

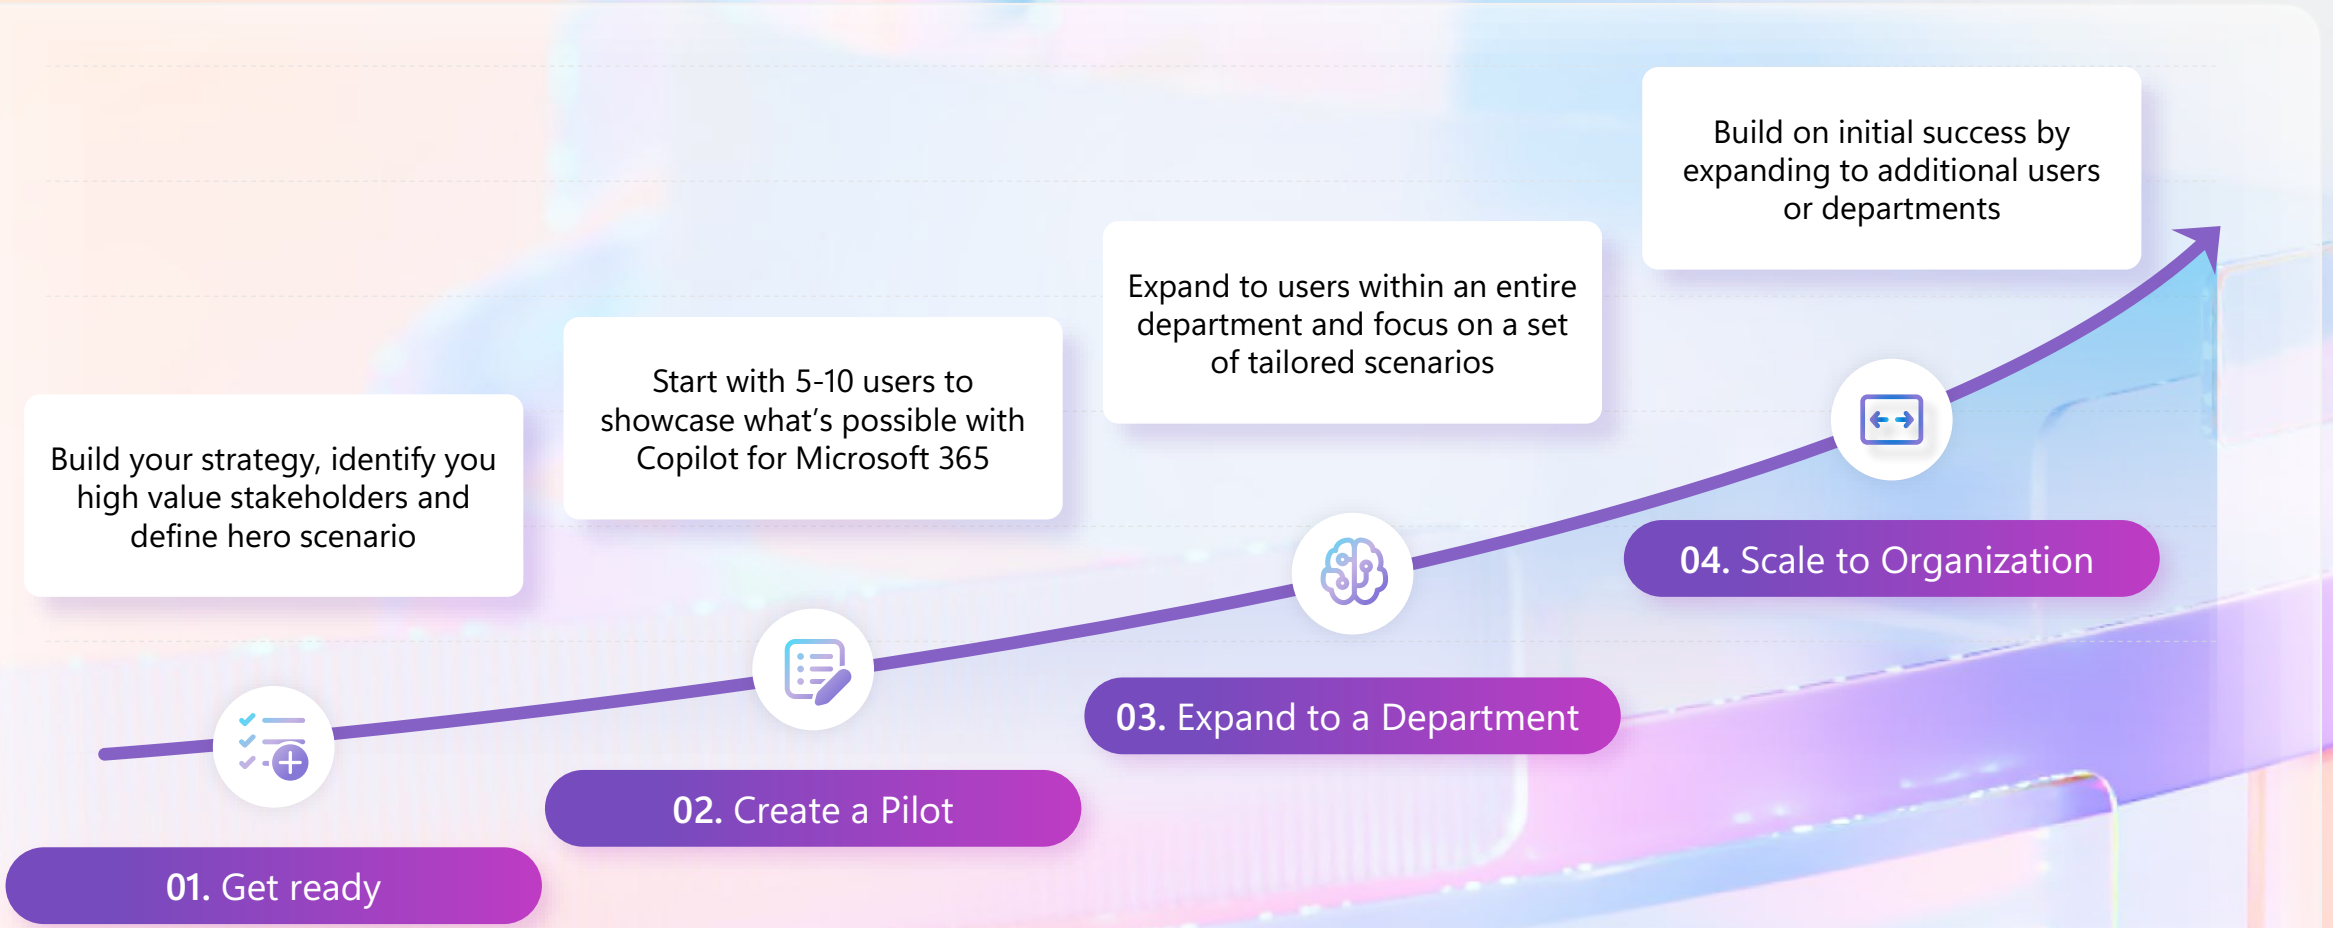

Create custom copilots and GPTs

Incorporate your data and plugins for engaging interactions in the places that matter the most.

Use one connected platform

Built on the foundations of leading AI technologies including Power Virtual Agents, and can connect to Azure AI Studio and more.

Four steps to drive Copilot success with customers
