"fantastic feature set, given that it is just going to be in Microsoft 365 Business Premium, considered the Gold Standard …",

….– Alex Fields, MSP Influencer, Introducing Microsoft Defender for Business: you heard that right… it's *included* with Business Premium – ITProMentor.

[1] iOS, and Android requires Microsoft Intune. Intune is included in Microsoft 365 Business Premium. Please see Documentation for more detail.

Microsoft Defender for Business

Elevate your security

Endpoint protection specially designed for businesses with up to 300 employees.

Enterprise-grade protection

Protect your devices against ransomware and other cyberthreats with industry-leading Defender technologies like endpoint detection and response and threat and vulnerability management.

Easy to use

Get up and running quickly with easy, wizard-based onboarding. Out-of-the box policies and automated investigation and remediation help automatically protect you against the latest threats, so you can focus on running your business.

Cost-effective

Security that just works without compromising budget.

Available in two flexible plans as part of Microsoft 365 Business Premium, or as a standalone solution for $3 per user per month.

Microsoft the only Leader in IDC MarketScape for Modern Endpoint Security for Enterprise and Small and Midsize Businesses

IDC MarketScape: Worldwide Modern Endpoint Security for Small and Midsize Businesses 2021 Vendor Assessmenthttps://idcdocserv.com/US48304721
IDC MarketScape vendor analysis model is designed to provide an overview of the competitive fitness of information and communication technology (ICT) suppliers in a given market. The research methodology utilizes a rigorous scoring methodology based on both qualitative and quantitative criteria that results in a single graphical illustration of each vendor's position within a given market. The Capabilities score measures vendor product, go-to-market, and business execution in the short term. The Strategy score measures alignment of vendor strategies with customer requirements in a three to five-year timeframe. Vendor market share is represented by the size of the icons.

Microsoft named a Leader in IDC MarketScape for Modern Endpoint Security for Enterprise and Small and Midsize Businesses - Microsoft Security Blog

Welcome to Microsoft Defender for Business

Welcome to Microsoft Defender for Business, where you can monitor and manage security across your devices. Learn more about Microsoft Defender for Business

Let's set this up!

We'll walk you through these steps of the setup process:

- Assign user permissions
- Set up email notifications
- Onboard and configure Windows devices

Get started

- **Assign user permissions**
- Set up email notifications
- Add Windows devices
- Apply security settings
- Finish

Let's give people access

Select users or groups to assign the Security Reader or Security Admin role.
You can edit role assignments later in Microsoft Azure Active Directory (Azure AD)

Users can be assigned as:

- **Security Administrators** can view security information and reports, and manage security settings
- **Security Readers** can view security information and reports

Learn more about these roles

Name	Role
Type user or group name	Select role

+ Add role assignment

Continue

Skip Cancel

- Assign user permissions
- Set up email notifications
- Add Windows devices
- Apply security settings
- Finish

Let's give people access

Select users or groups to assign the Security Reader or Security Admin role.
You can edit role assignments later in Microsoft Azure Active Directory (Azure AD)

Users can be assigned as:

- **Security Administrators** can view security information and reports, and manage security settings
- **Security Readers** can view security information and reports

Learn more about these roles

Name	Role
MA MOD Administrator	Security admin
AV Adele Vance	Security reader

+ Add role assignment

Continue

Skip

Cancel

- Assign user permissions
- **Set up email notifications**
- Add Windows devices
- Apply security settings
- Finish

Set up email notifications

Specify an email address and select the type of notifications you want users to receive.
This action creates rules that you can edit later in your email notification settings.

Email notification types

Alerts
Get email notifications when any type of alert is triggered on devices.

Vulnerabilities
Get email notifications when certain exploit or vulnerability events occur, such as a new public exploit.

Recipients	Notification type
admin@M365B345200.onmicrosoft.com	Select notification type

Alerts
Vulnerabilities
Alerts & vulnerabilities

+ Add recipients

Back | Continue | Skip | Cancel

- Assign user permissions
- Set up email notifications
- **Add Windows devices**
- Apply security settings
- Finish

Choose a method to onboard devices

Onboard **Windows devices** to seamlessly enroll the devices in Azure Active Directory and Microsoft Endpoint Manager. You can add other OS devices later.

To get started, choose the preferred deployment method. Learn more about onboarding devices

Onboarding method

- Microsoft Endpoint Manager
- Local Script
- Group Policy
- VDI onboarding scripts

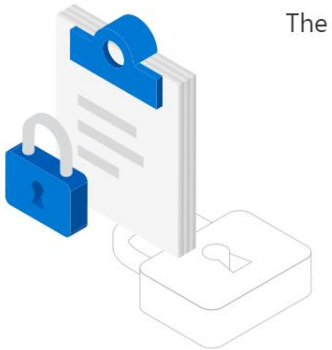

Back | Continue | Cancel

- Assign user permissions
- Set up email notifications
- Add Windows devices
- **Apply security settings**
- Finish

Apply security settings

Let us do the work for you

Microsoft Defender for Business includes default policies with recommended settings that can be applied to Windows devices. Learn more about security configuration settings

The recommended configuration will include:

- Next generation protection policies for antivirus and threat protection
- Firewall policies to block or allow network traffic

To start the process, choose '**Continue**' You can always edit your settings later in **Device configuration**

Back | Continue | Skip | Cancel

- Assign user permissions
- Set up email notifications
- Add Windows devices
- Apply security settings
- **Finish**

You're almost done..

Review the details below. When you're ready, select Submit to finish setting up your preferences.

Roles and permissions

Security reader (1)

AV Adele Vance

Security admin (1)

MA MOD Administrator

Email notifications

Set up email notifications for these recipients:

admin@M365B345200.onmicrosoft.com - Alerts & vulnerabilities

Devices to add

Onboard your organization's devices to Microsoft Defender for Business

Back Submit Cancel

- Assign user permissions
- Set up email notifications
- Add Windows devices
- Apply security settings
- Finish

Hold on while we set this up

Sit back, this may take a few seconds..

Done

- Assign user permissions
- Set up email notifications
- Add Windows devices
- Apply security settings
- Finish

You're all set

Here are some steps you can take to get started.

System dashboard

Visit your system dashboard to see real-time status of your organization

Go to System dashboard

Device configuration

View or edit device security policies

Go to Device configuration

Onboard more devices

Add more devices, including devices with non-Windows operating systems

Go to device onboarding

This section provides a set of advanced features you can enable.
These features require integration with other products. You need to verify that these settings are enabled to use the features.

On — Automated Investigation
Enables the automation capabilities for investigation and response.

On — Live Response
Allows users with appropriate RBAC permissions to investigate devices that they are authorized to access, using a remote shell connection.

On — Live Response for Servers
Allows users with Live Response privileges to connect remotely to servers (Windows Server or Linux devices) that they are authorized to access.

On — Live Response unsigned script execution
Enables using unsigned PowerShell scripts in Live Response.

section in the Microsoft Defender for Endpoint guide.

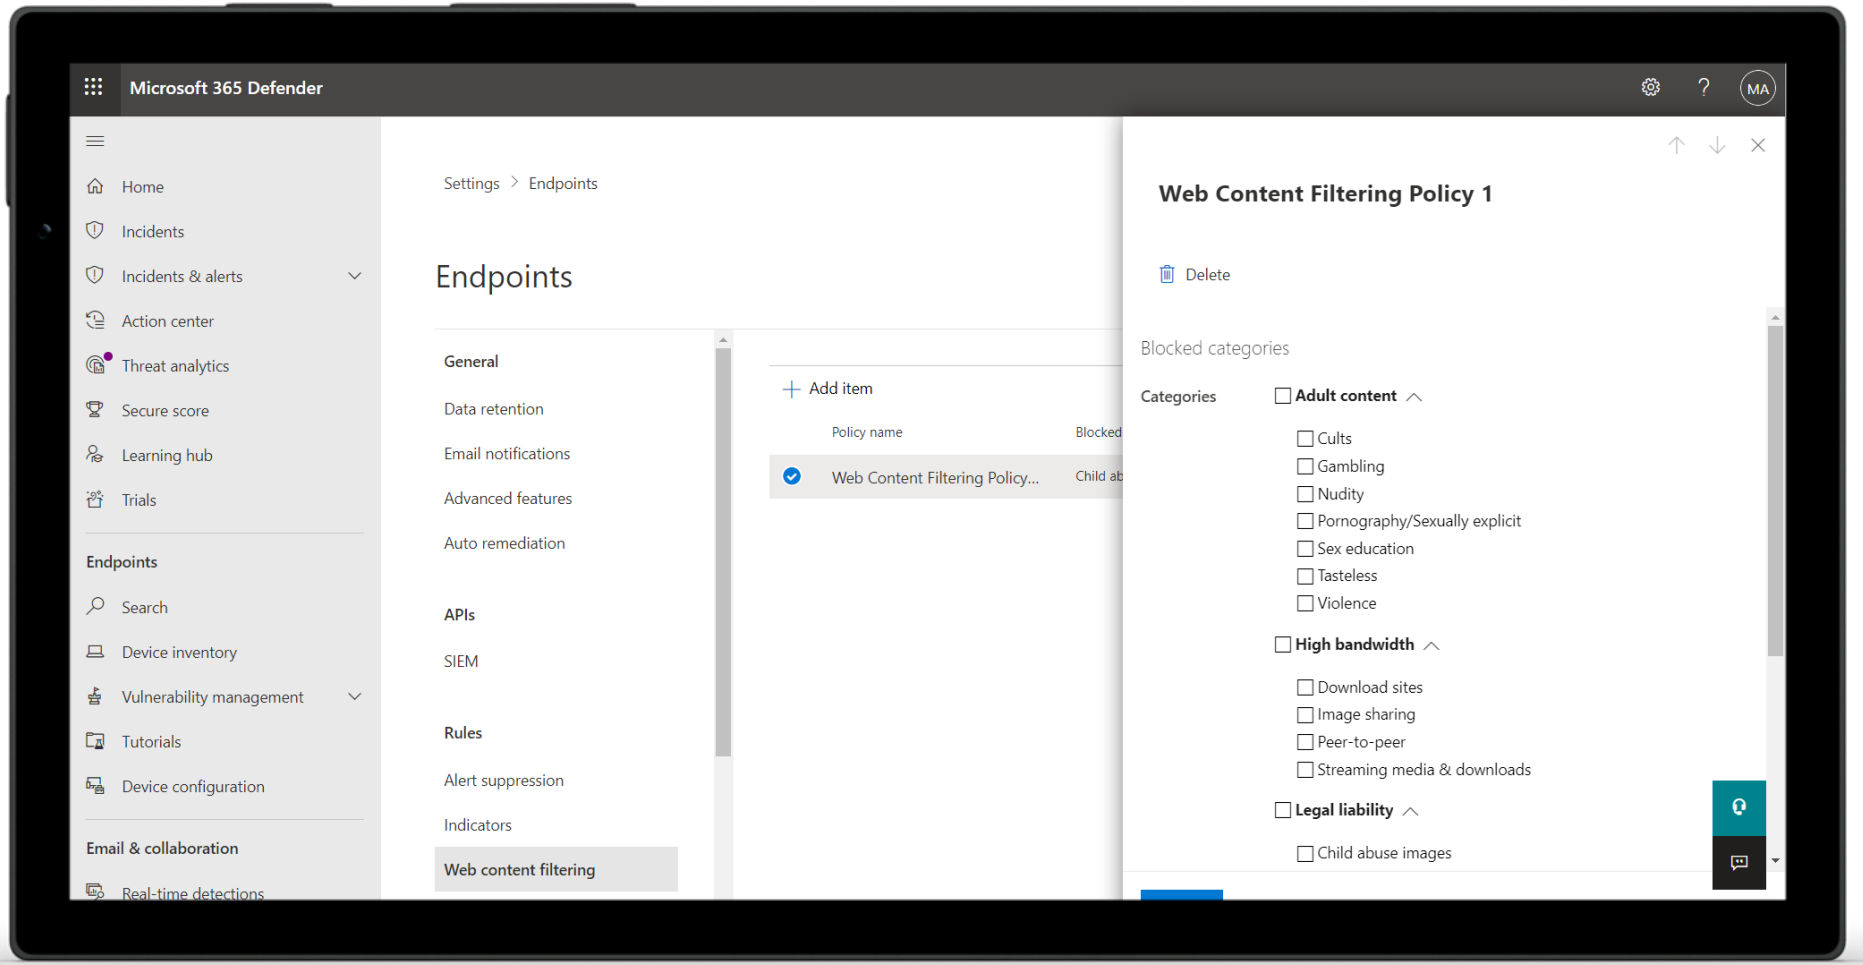

Select operating system to start onboarding process:

Windows 10 and 11

- Windows 7 SP1 and 8.1
- Windows 10 and 11
- Windows Server 2008 R2 SP1
- Windows Server 2012 R2 and 2016
- Windows Server 1803, 2019 and 2022
- macOS
- Linux Server
- iOS
- Android

DEMO

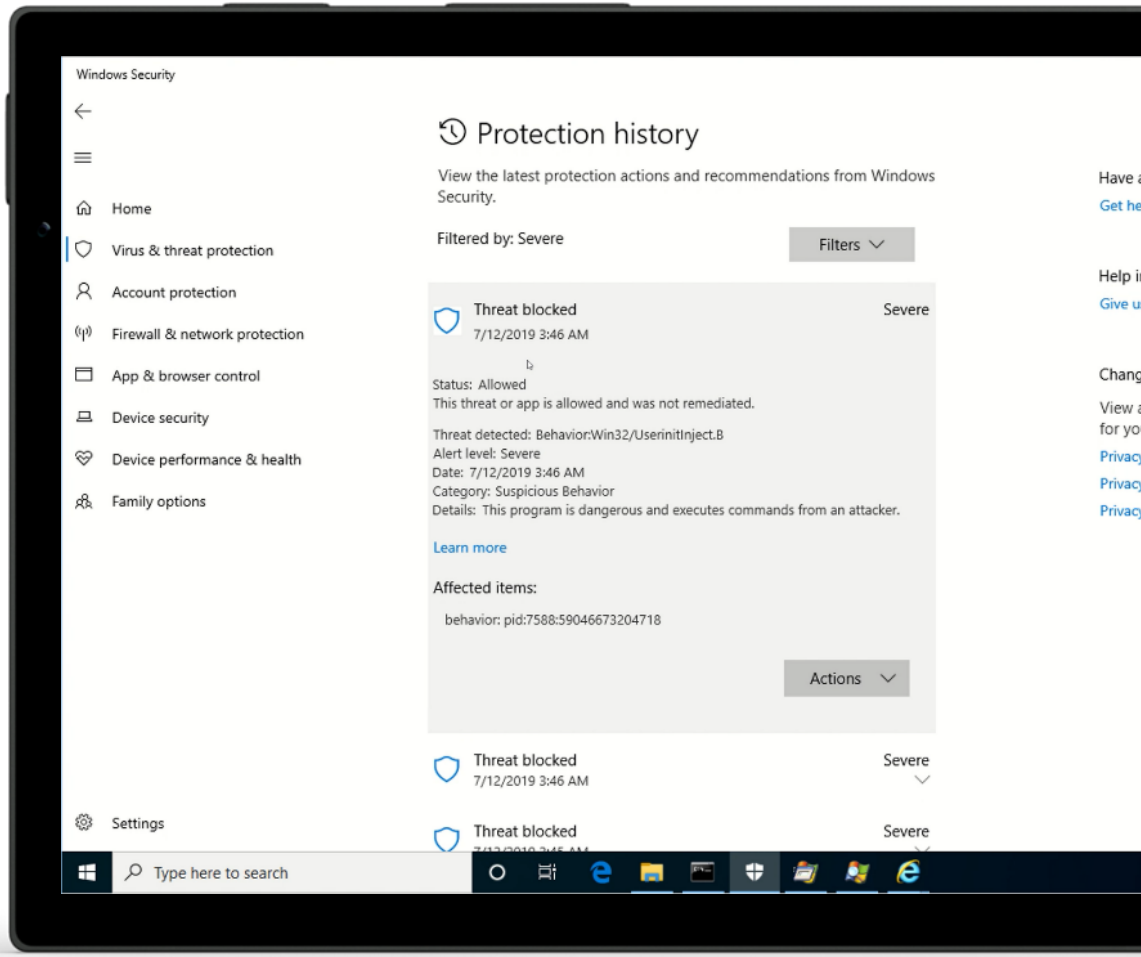

Web content filtering configuration

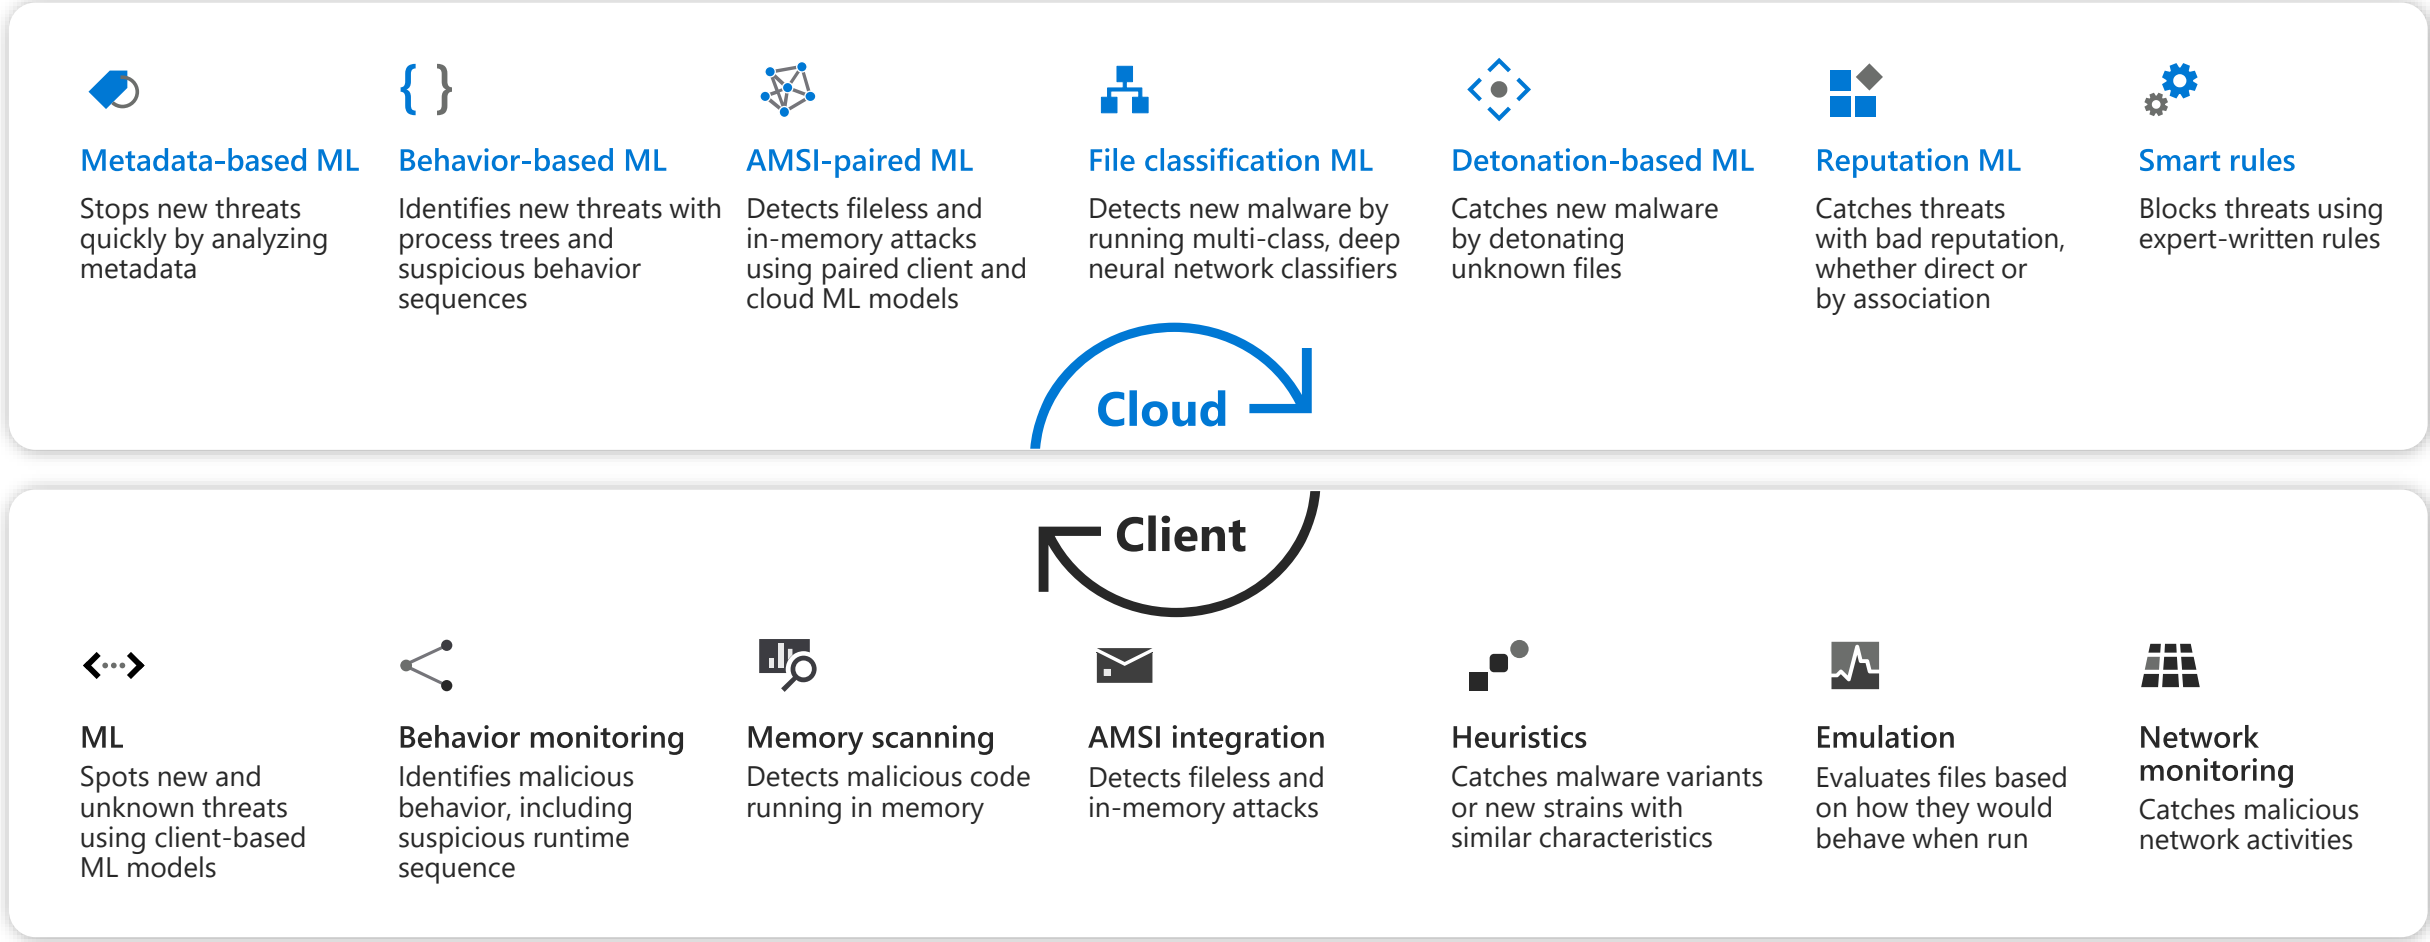

Next Generation Protection

Helps block and tackle sophisticated threats and malware

1. Behavioral based real-time protection
2. Blocks file-based and fileless malware
3. Stops malicious activity from trusted and untrusted applications

Microsoft Defender for Business next generation protection engines

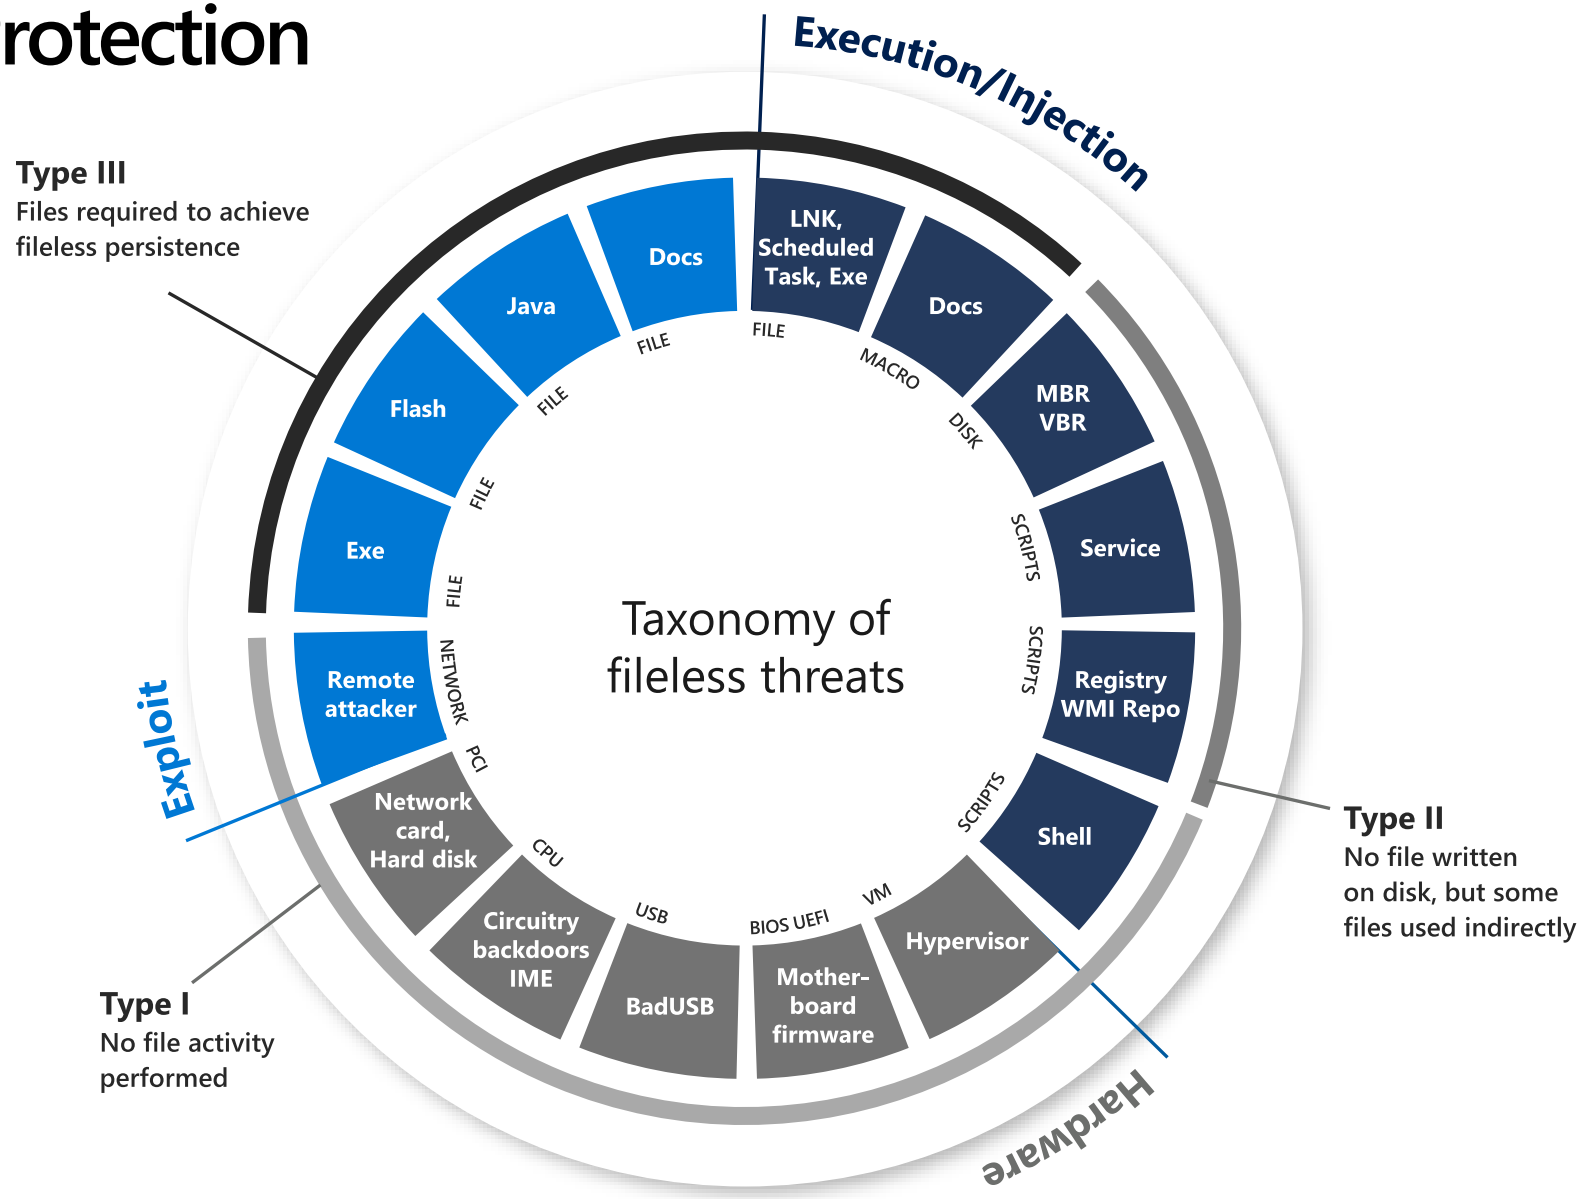

Innovations in Fileless Protection

→Dynamic and in context URL analysis to block call to malicious URL

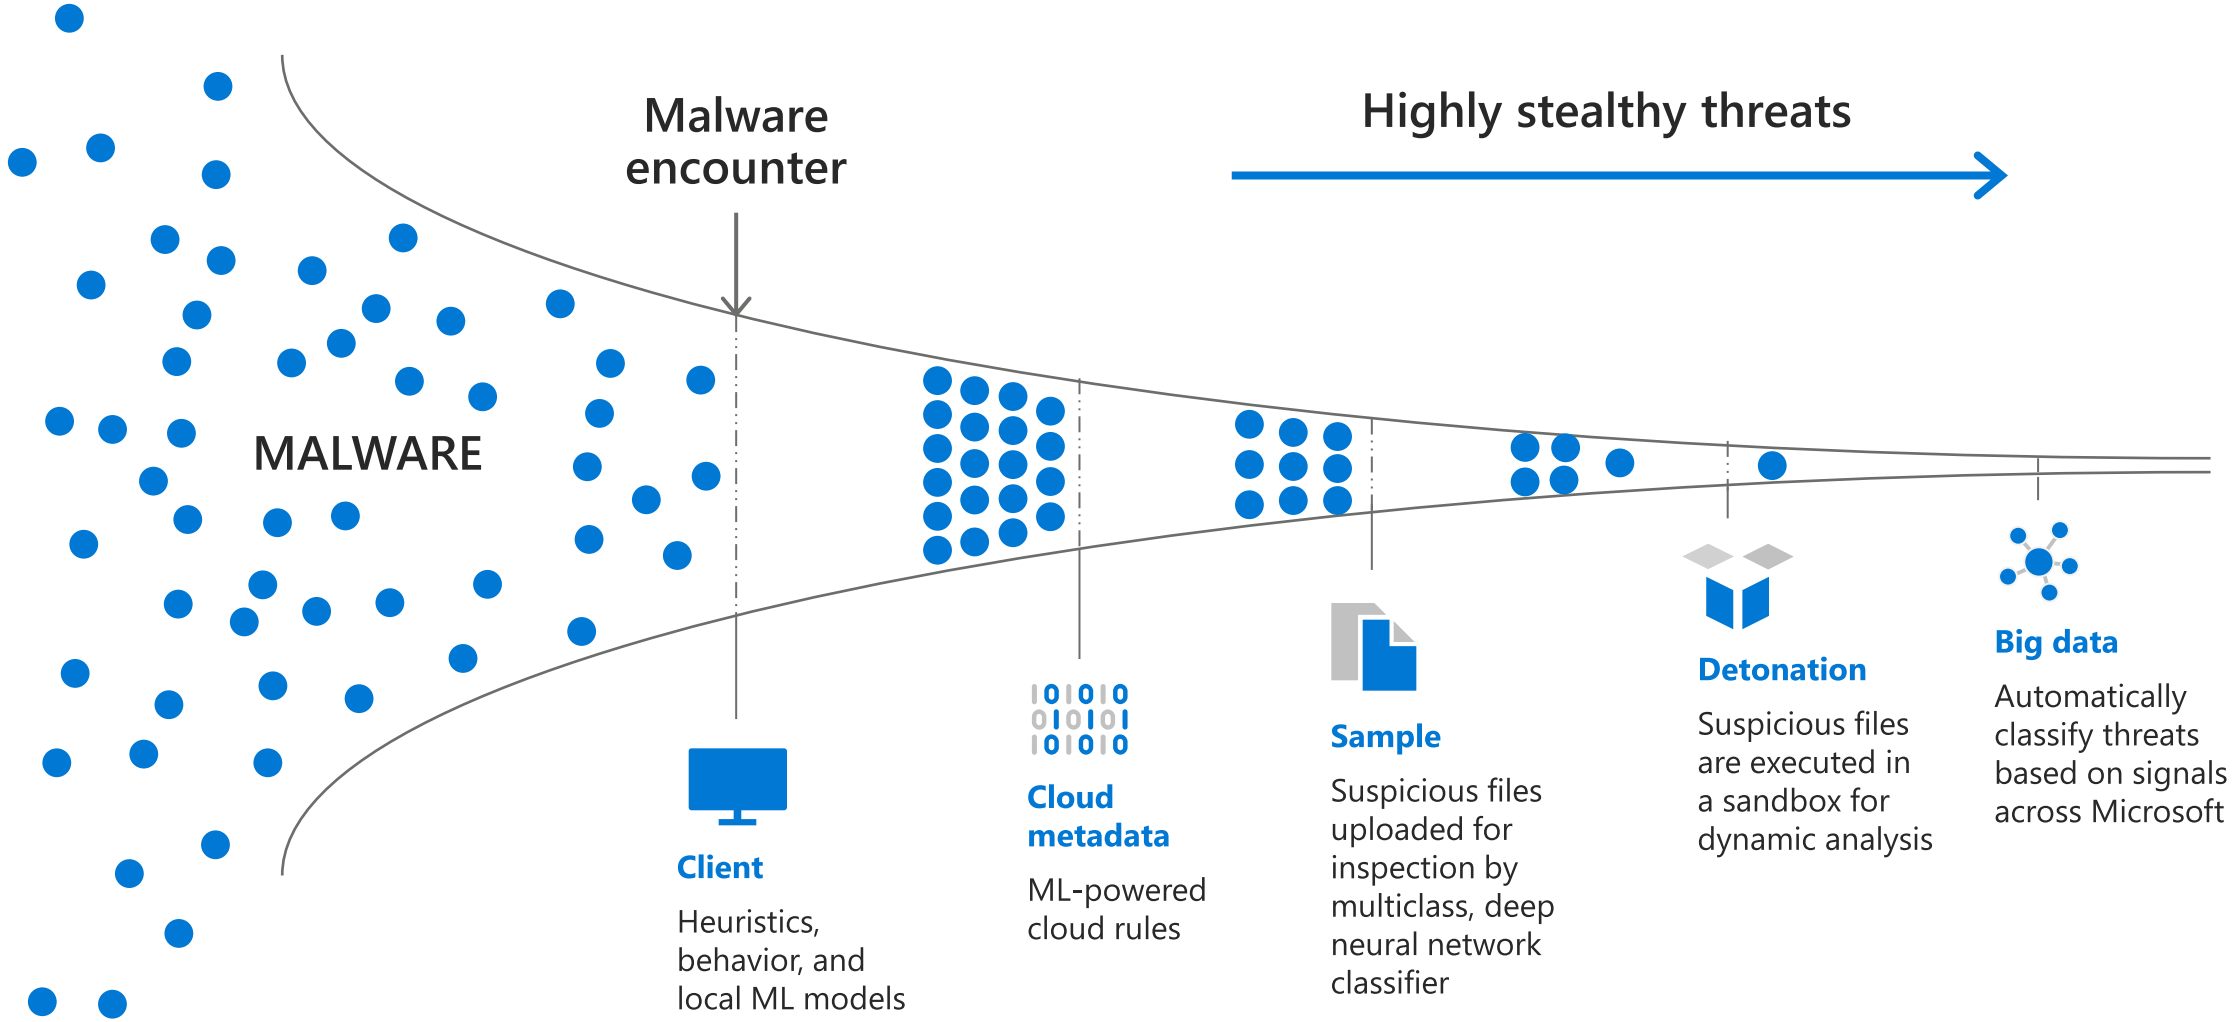

→AMSI-paired machine learning uses pairs of client-side and cloud-side models that integrate with Antimalware Scan Interface (AMSI) to perform advanced analysis of scripting behavior

→DNS exfiltration analysis

→Deep memory analysis

Microsoft Defender for Business' NGP protection pipeline

Dynamic: behavior monitoring

Monitors activity on:

- Files
- Registry keys
- Processes
- Network (basic HTTP inspection)
- … and few other specific activities

Heuristics can:

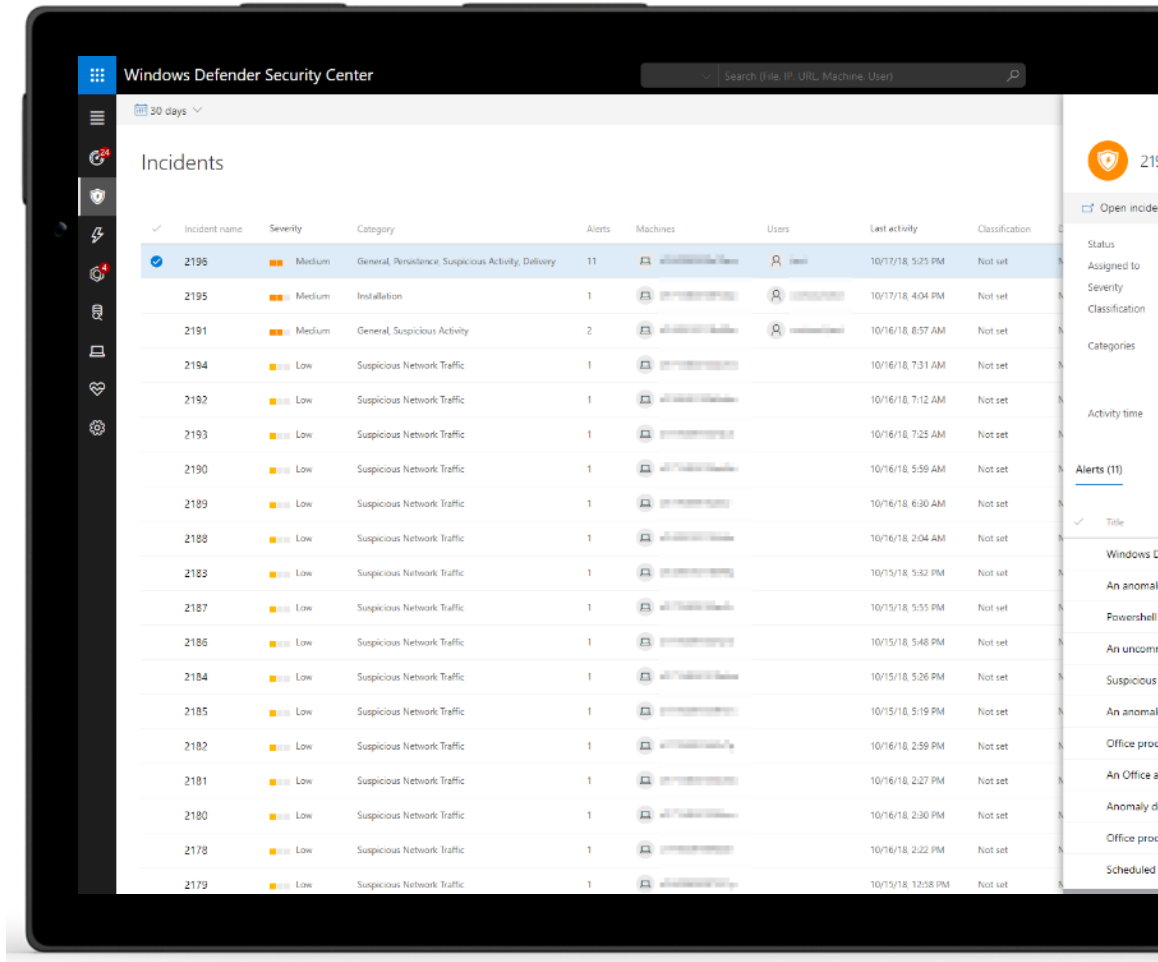

- Detect sequences of events
  E.g. a file named “malware.exe” is created
- Inspect event data
  E.g. an AutoRun key is created and contains “malware.exe”
- Correlate with other static signals
  E.g. “malware.exe” has an attribute indicating it is a DotNet executable
- Perform some basic remediation
  E.g. delete “malware.exe” if the BM event reported infection
- Request memory scan of running processes

Endpoint Detection & Response

Detect and investigate advanced persistent attacks

1. Behavioral-based detection
2. Manual response actions for a device or file
3. Live response to gain access to devices

Incidents

Narrate the end-to-end attack story

Reconstructing the story

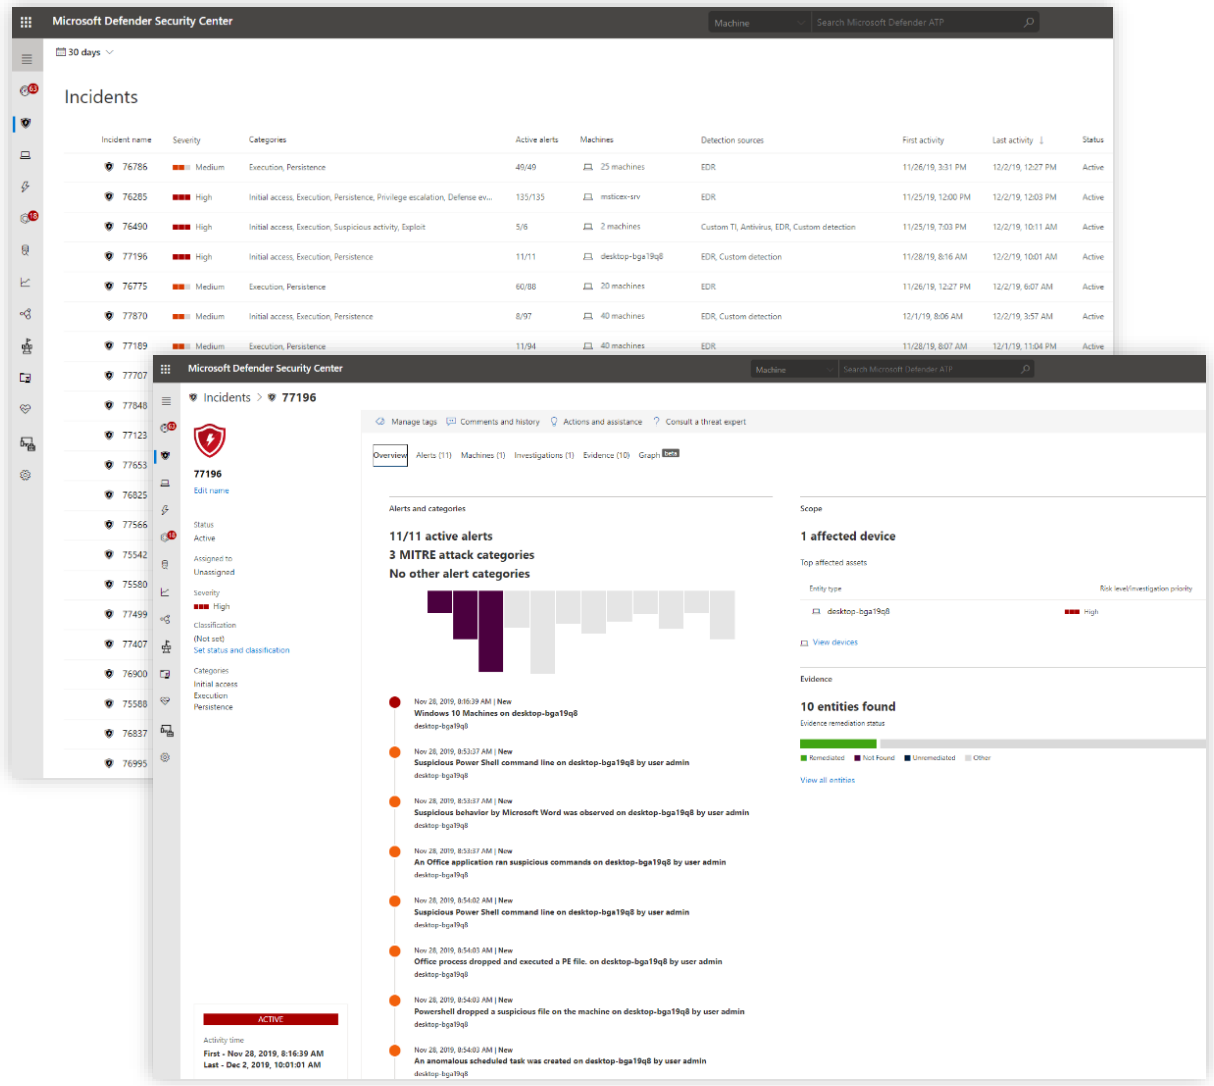

The broader attack story is better described when relevant alerts and related entities are brought together.

Incident scope

IT Admins receive better perspective on the purview of complex threats containing multiple entities.

Higher fidelity, lower noise

Effectively reduces the load and effort required to investigate and respond to attacks.

Live Response

→Real-time live connection to a remote system

→Leverage Microsoft Defender for Business Auto IR library (memory dump, MFT analysis, raw filesystem access, etc.)

- Extended remediation command + easy undo

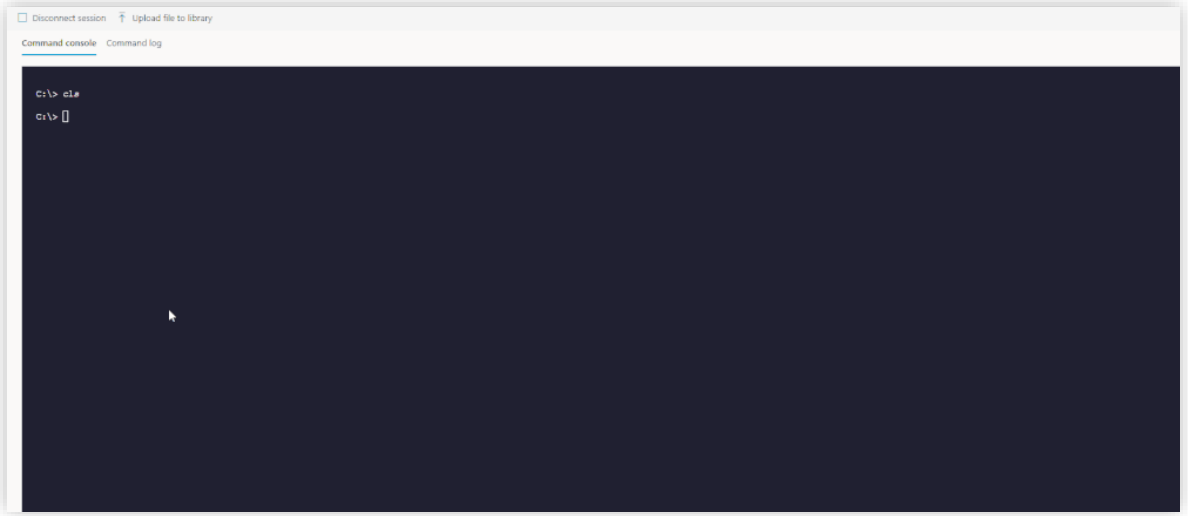

→Full audit

→Extendable (write your own command, build your own tool)

→RBAC+ Permissions

→Git-Repo (share your tools)

Threat Analytics

Delivering insight on major threats to your organization

Threat to posture view

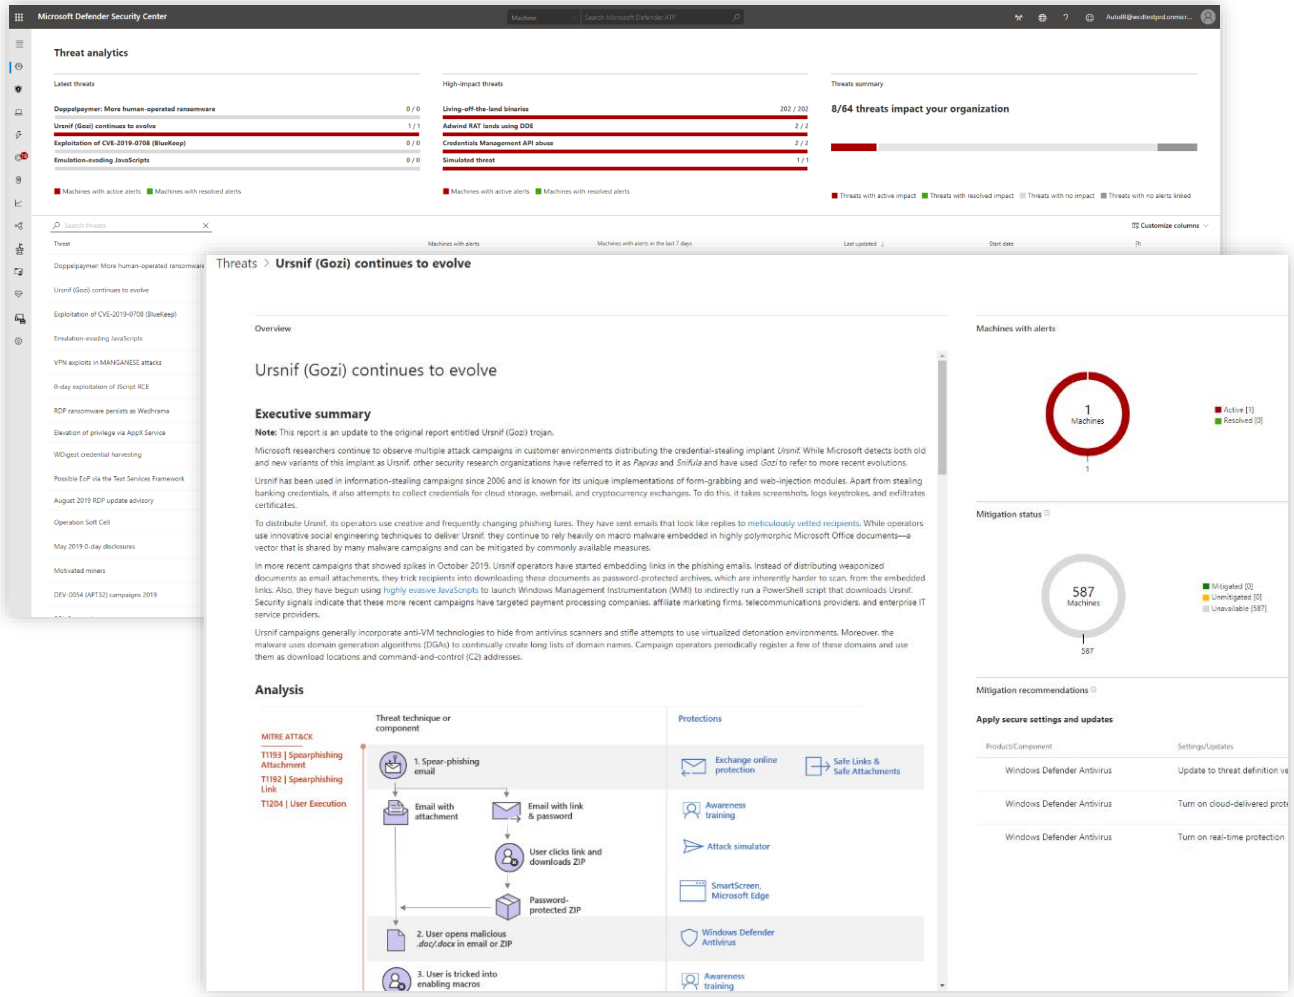

See how you score against significant and emerging campaigns with interactive reports.

Identify unprotected systems

Get real-time insights to assess the impact of the threat on your environment.

Get guidance

Provides recommended actions to increase security resilience, to prevention, or contain the threat.

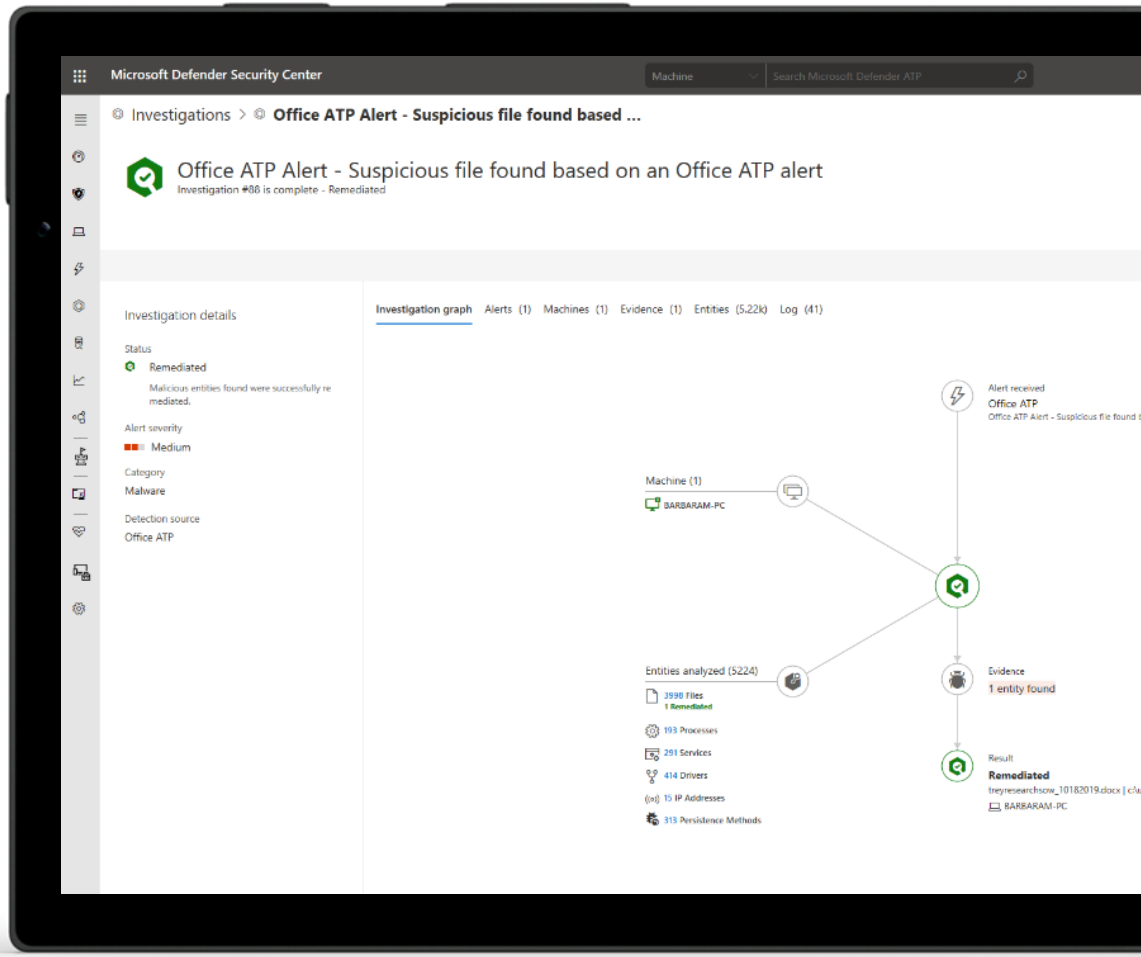

DEMO

Auto Investigation & Remediation

Automatically investigates alerts and helps to remediate complex threats

1. Mimics the ideal steps analysts would take
2. Tackles file or memory-based attacks
3. Scales security operations with 24x7 automated responses

What Is Microsoft Defender for Business Auto IR?

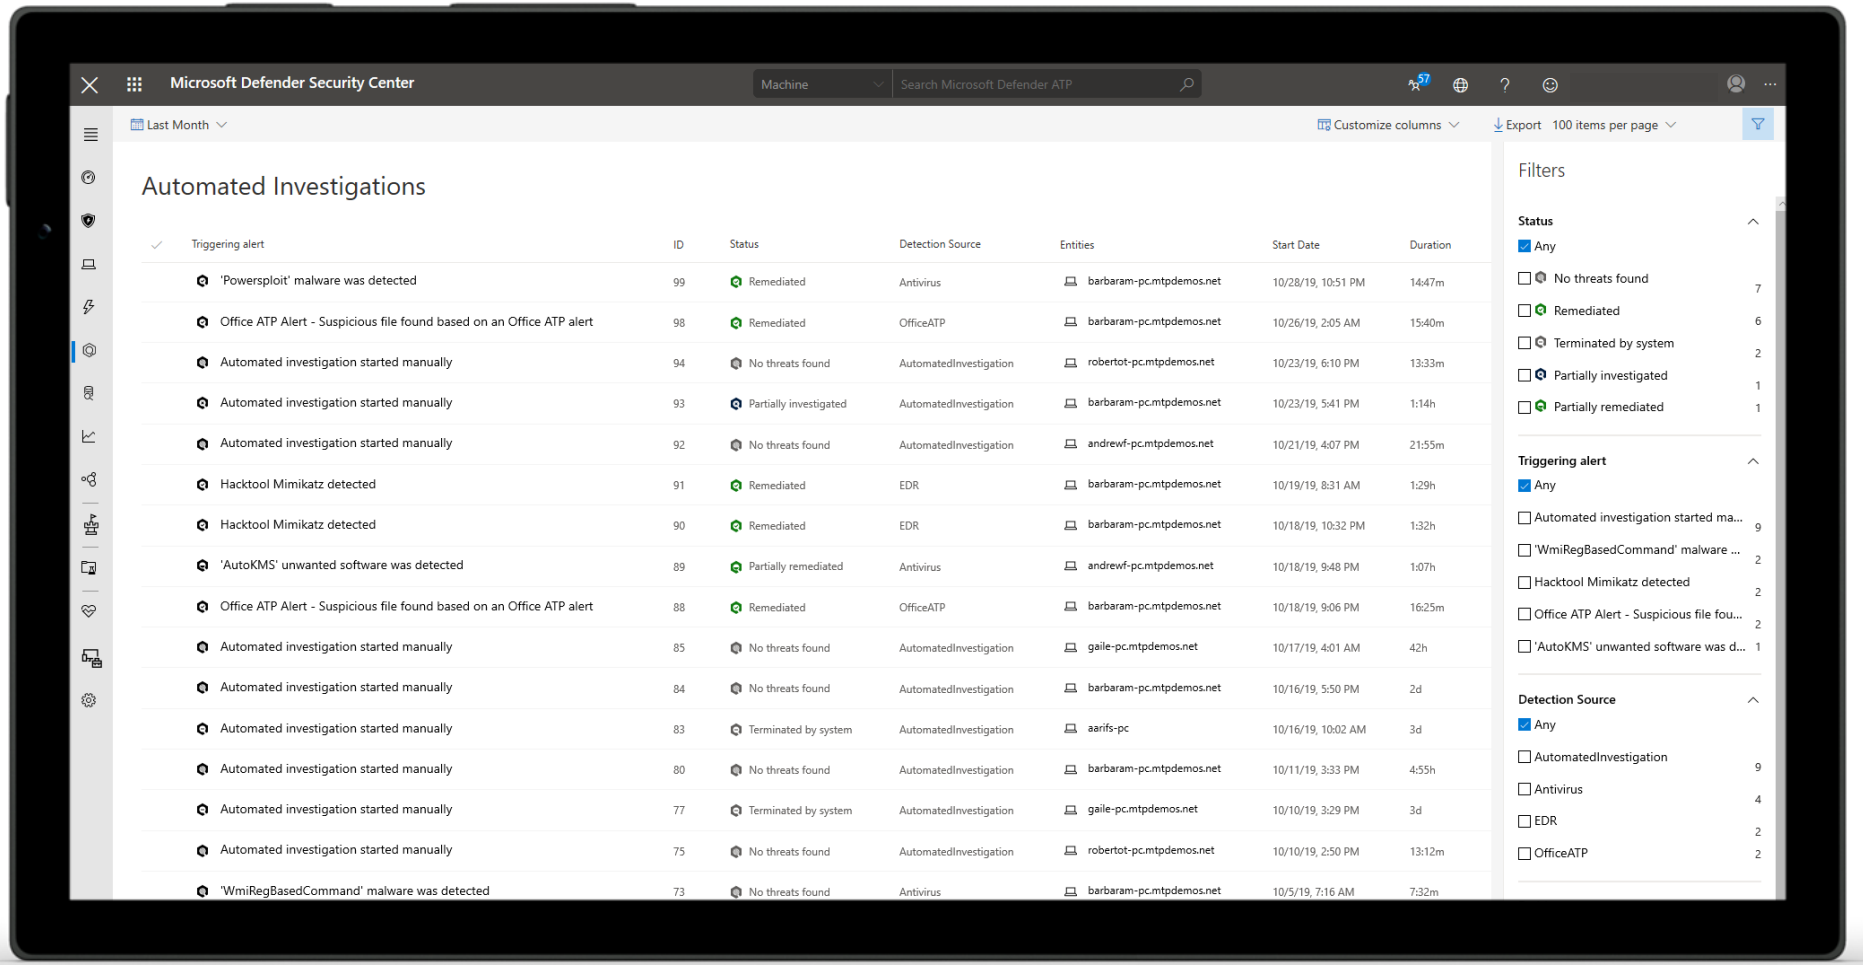

Security automation is…
mimicking the *ideal steps* a human would take *to investigate and remediate* a cyber threat

Security automation is not…
if machine has alert → auto-isolate

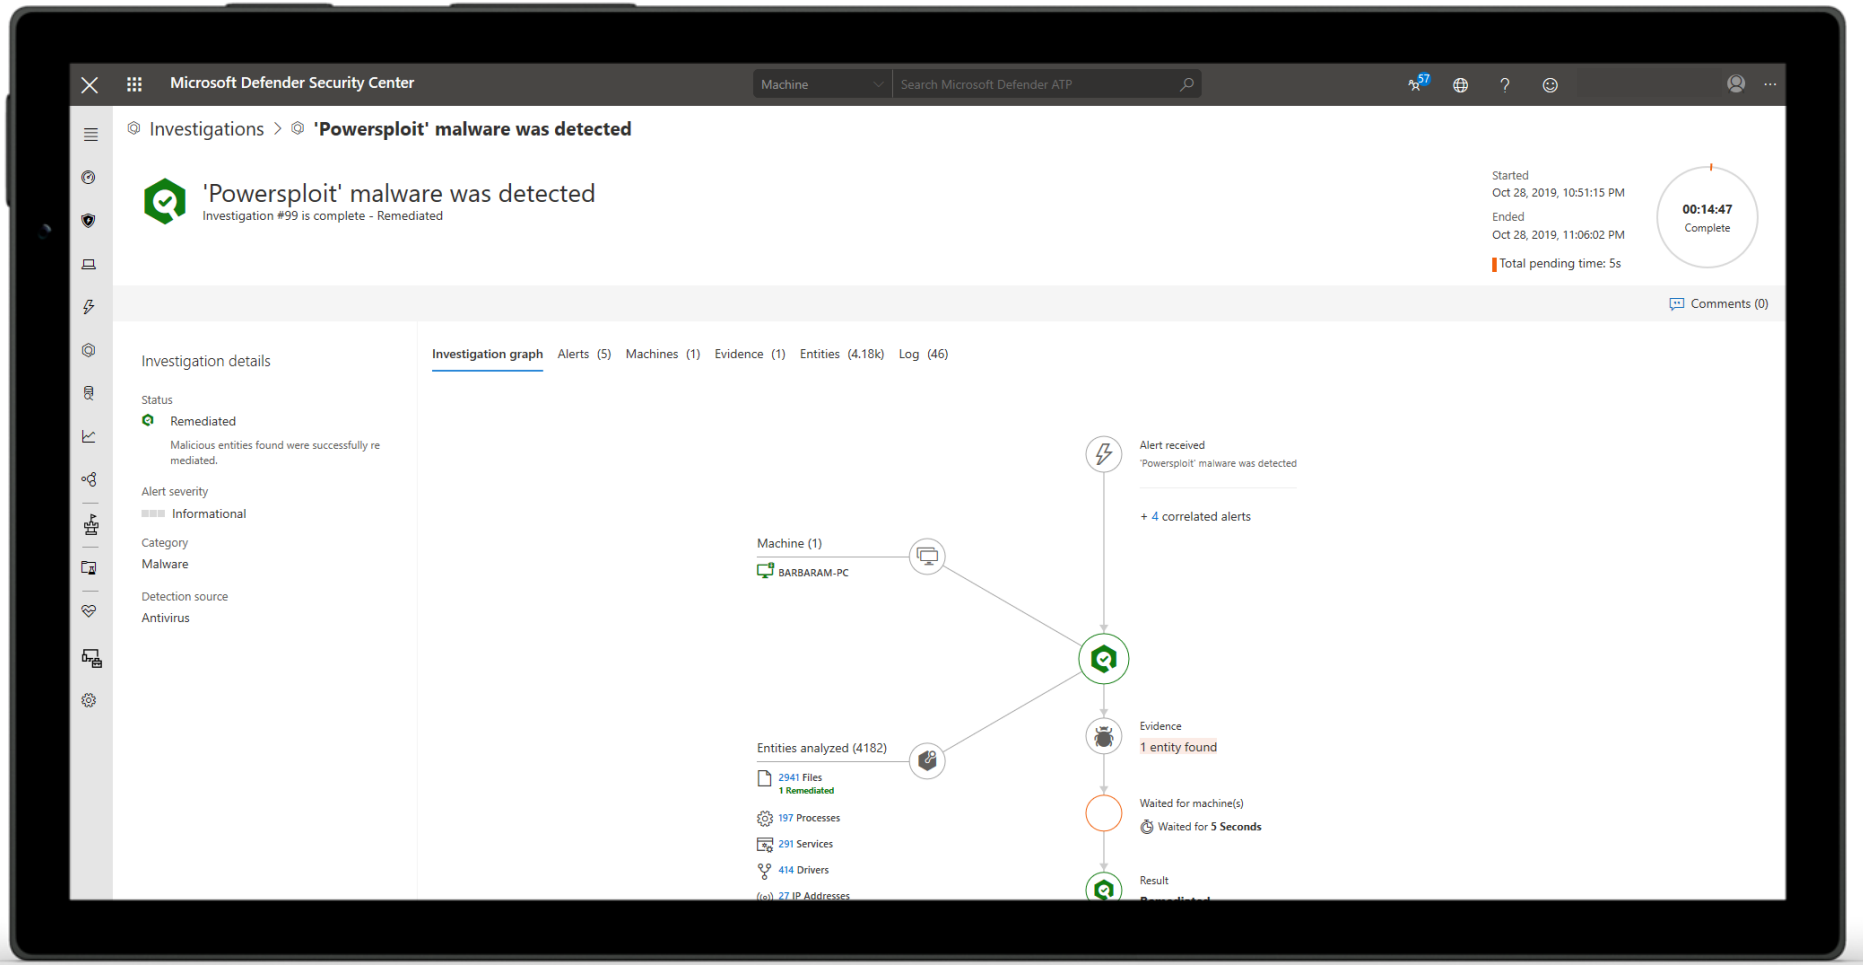

When we look at the steps an analyst is taking as when investigating and remediating threats we can identify the following high-level steps:

1. Determining whether the threat requires action
2. Performing necessary remediation actions
3. Deciding what additional investigations should be next
4. Repeating this as many times as necessary for every alert ☺

Defender for Business servers now in preview

Add-on Windows and Linux server protection to Defender for Business or Microsoft 365 Business Premium*

1. Same protection for both clients and servers with a single simplified admin experience.
2. Multi-customer management with Microsoft 365 Lighthouse integration
3. $3 per server instance at time of general availability

Get the preview at https://aka.ms/DefenderforBusiness

Learn more from the https://aka.ms/MDB-TechblogJuly22

*Add-on requires a minimum of one Microsoft 365 Business Premium, or Defender for Business subscription.

Built on the foundation of an industry leader in endpoint security

Gartner names Microsoft a Leader in 2021 Endpoint Protection Platforms Magic Quadrant.

Microsoft leads in real-world detection in MITRE ATT&CK evaluation.

Forrester names Microsoft a Leader in 2021 Endpoint Security Software as a Service Wave.

Microsoft Defender for Endpoint awarded a perfect 5-star rating by SC Media in 2020 Endpoint Security Review

IDC names Microsoft a Leader for Modern Endpoint Security for Enterprise and Small and Midsize Businesses

Our antimalware capabilities consistently achieve high scores in independent tests.

Microsoft won six security awards with Cyber Defense Magazine at RSAC 2021:

- Best Product Hardware Security
- Market Leader Endpoint Security
- Editor's Choice Extended Detection and Response (XDR)
- Most Innovative Malware Detection
- Cutting Edge Email Security

IDC MarketScape: Worldwide Modern Endpoint Security for Enterprises 2021 Vendor Assessment, Doc #US48306021. November 2021

Microsoft Defender consistently rated top AV

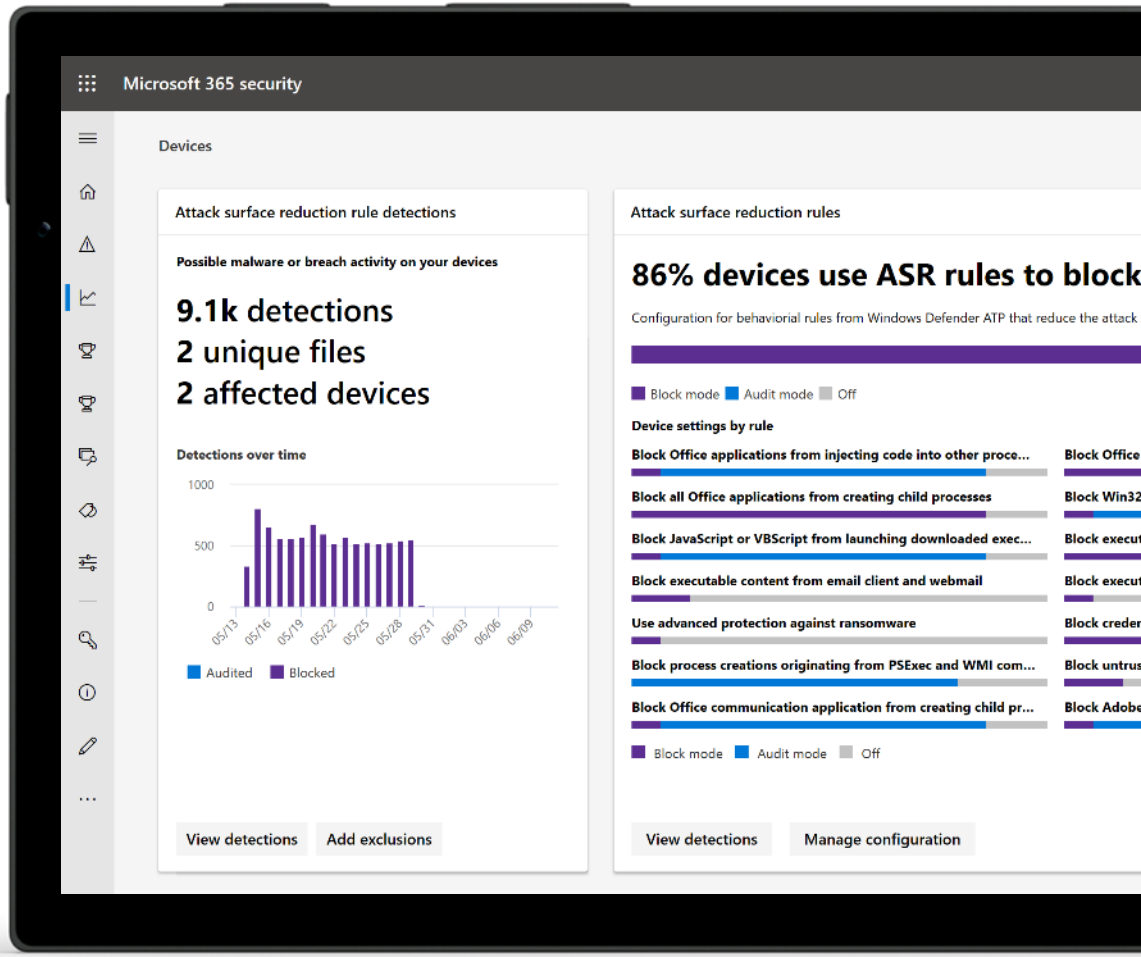

1. **AV-TEST**: Protection score of 6.0/6.0 in the latest test
2. **AV-Comparatives**: Protection rating of 99.7% in the latest test
3. **SE Labs**: AAA award in the latest test
4. **MITRE**: Industry-leading optics and detection capabilities

Attack Surface Reduction

Protect against risks by reducing the surface area of attack

1. System hardening without disruption
2. Customization that fits your business
3. Visualize the impact and simply turn it on

Attack Surface Reduction

Resist attacks and exploitations

HW based isolation	Isolate access to untrusted sites
Application control	Isolate access to untrusted Office files
Exploit protection	Host intrusion prevention
Network protection	Exploit mitigation
Controlled folder access	Ransomware protection for your files
Device control	Block traffic to low reputation destinations
Web protection	Protect your legacy applications
Ransomware protection	Only allow trusted applications to run

Attack Surface Reduction (ASR) Rules

Minimize the attack surface

Attack surface reduction (ASR) rules help to control entry points to your Windows devices using cloud intelligence, such as behavior of Office macros.

Productivity apps rules

- Block Office apps from creating executable content
- Block Office apps from creating child processes
- Block Office apps from injecting code into other processes
- Block Win32 API calls from Office macros
- Block Adobe Reader from creating child processes

Email rule

- Block executable content from email client and webmail
- Block only Office communication applications from creating child processes

Script rules

- Block obfuscated JS/VBS/PS/macro code
- Block JS/VBS from launching downloaded executable content

Polymorphic threats

- Block executable files from running unless they meet a prevalence (1000 machines), age (24hrs), or trusted list criteria
- Block untrusted and unsigned processes that run from USB
- Use advanced protection against ransomware

Lateral movement & credential theft

- Block process creations originating from PSExec and WMI commands
- Block credential stealing from the Windows local security authority subsystem (lsass.exe)
- Block persistence through WMI event subscription

DEMO
