1 Introduction

About this guide

This guide is designed to step you through the process of creating an automated drink ordering system using tools found in the Microsoft 365 environment.

In many businesses and events there is the need to provide drinks to groups of people. The traditional approach for this would be to record such orders on a piece of paper. A better approach is to use technology to digitise this process. This makes the process more reliable and faster. Importantly, this new digital drink ordering system can scale from one to many orders at a time and should provide efficiency benefits to many business.

This digital drink ordering system can also be viewed as a way to better learn and understand what the Power Platform from Microsoft is capable of and how anyone can go about digitising and automating business processes. This digital drink ordering system will integrate a number of services from Microsoft 365 including Power Automate, Microsoft Forms, Outlook and more. The aim of this guide is to show, by example, how an automated process can be built inside Microsoft 365. It won't necessary teach what each service does but it will show you how to integrate these together to produce something to automate what has traditionally been a manual process.

Initial information about which drink the user desires is gathered using Microsoft Forms. Submitting the form triggers an automated Flow, using Microsoft Power Automate that saves the user data into a SharePoint Online list and sends the user an email confirmation of their order. Additional Flows allow the review of the details entered by various users and creates an overall summary that can be used to fulfil the orders, by say, sending to a local café.

Copyright © 2021. All rights reserved

This document is a step-by-step guide that will take you through the complete process of creating the Microsoft Form, SharePoint lists and Power Automate Flows.

Pre-requisites

To complete this process you'll need access to an Office 365 or Microsoft 365 environment that includes the following services:

- Power Automate
- SharePoint Online
- Forms
- Exchange Online

Design considerations

The aim during this process is also to introduce you to best practices for automation processes. This involves techniques such as creating custom action names, which appears onerous at first but makes later troubleshooting and debugging far easier.

2 Microsoft Form

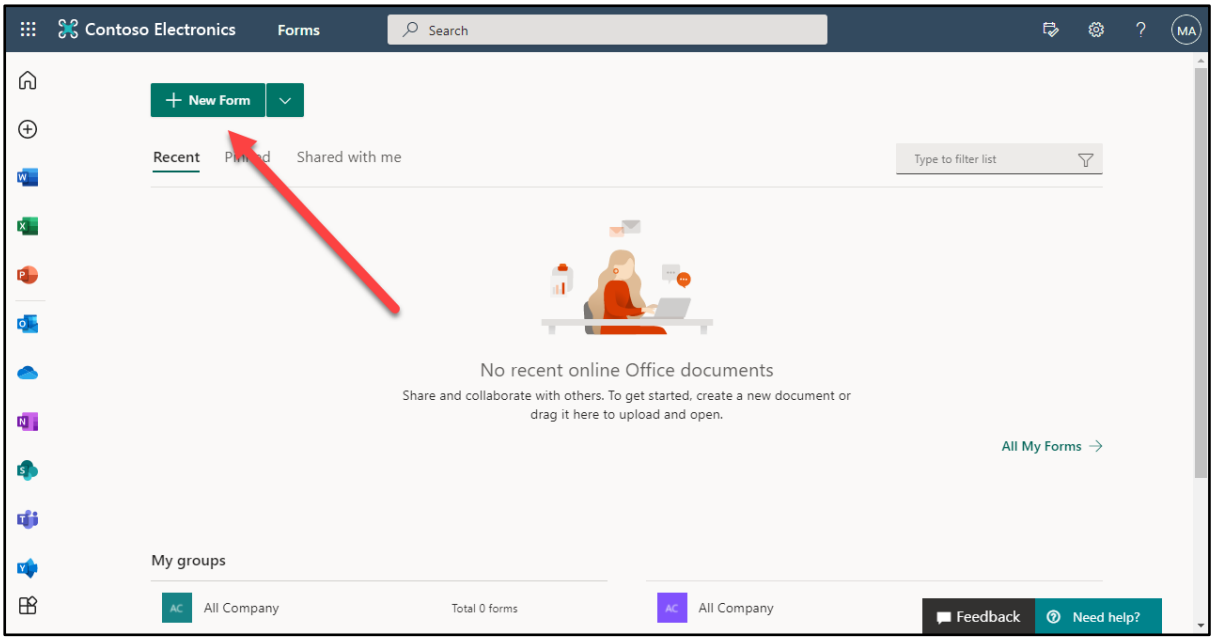

Data input is obtained from the user by having them complete a custom Microsoft Form.

Microsoft Form Creation.

1. Log into the Microsoft 365 Portal of your environment. You can access this via https://portal.office.com.

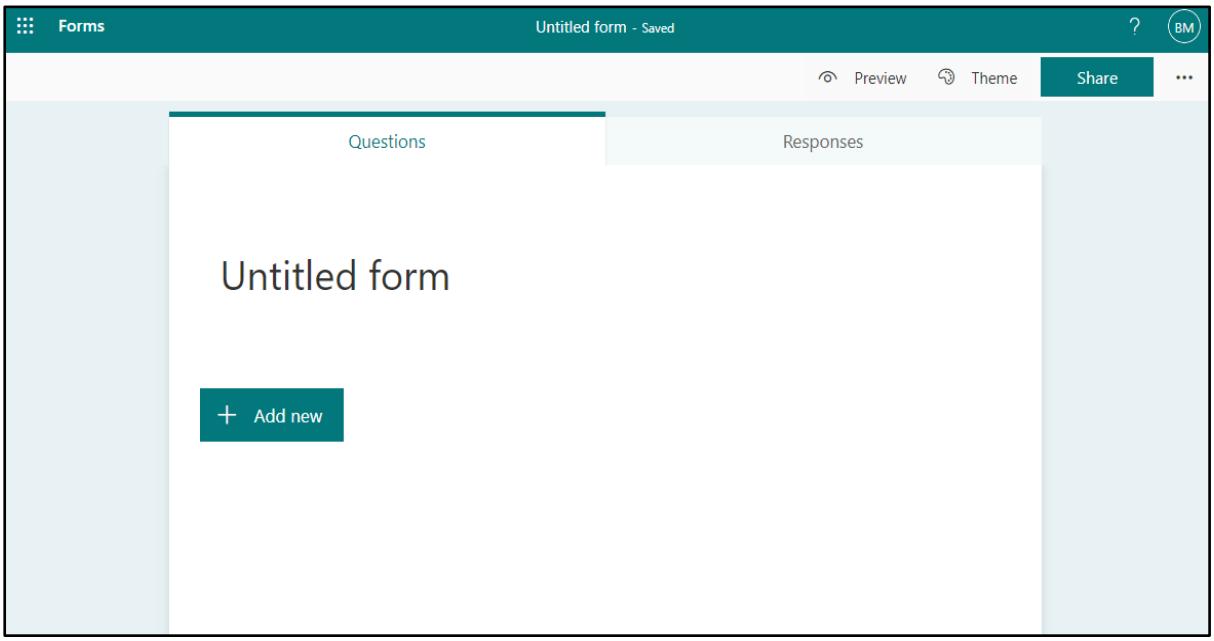

2. Find and select the **Forms** service

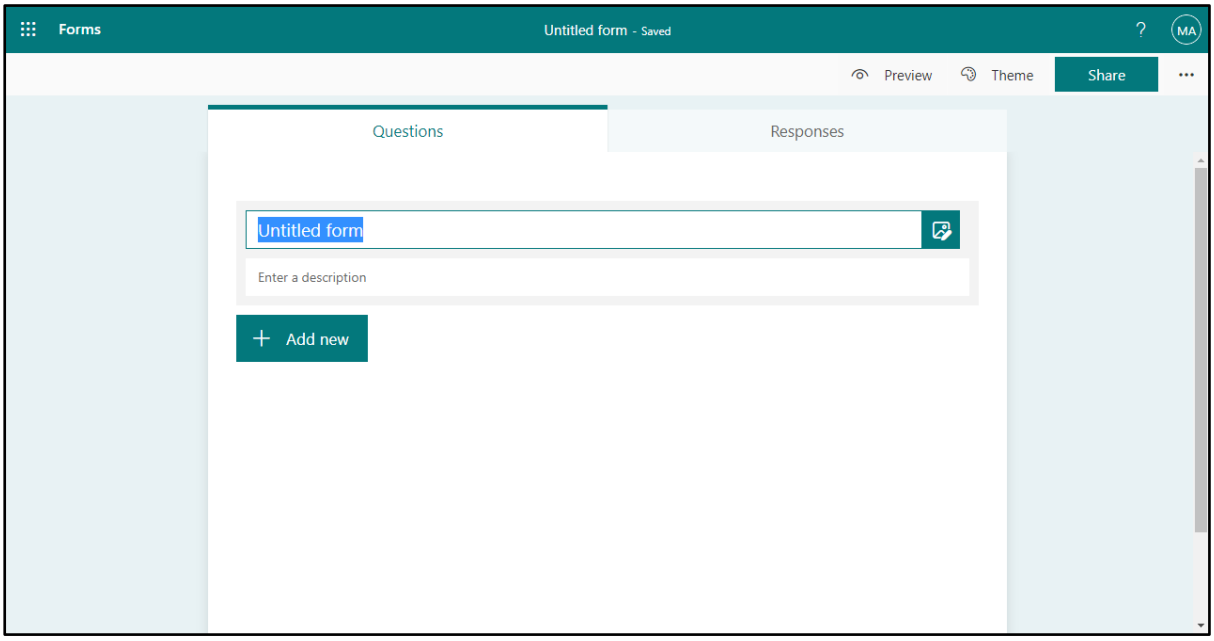

3. Click the **New Form** button.

Copyright © 2021. All rights reserved

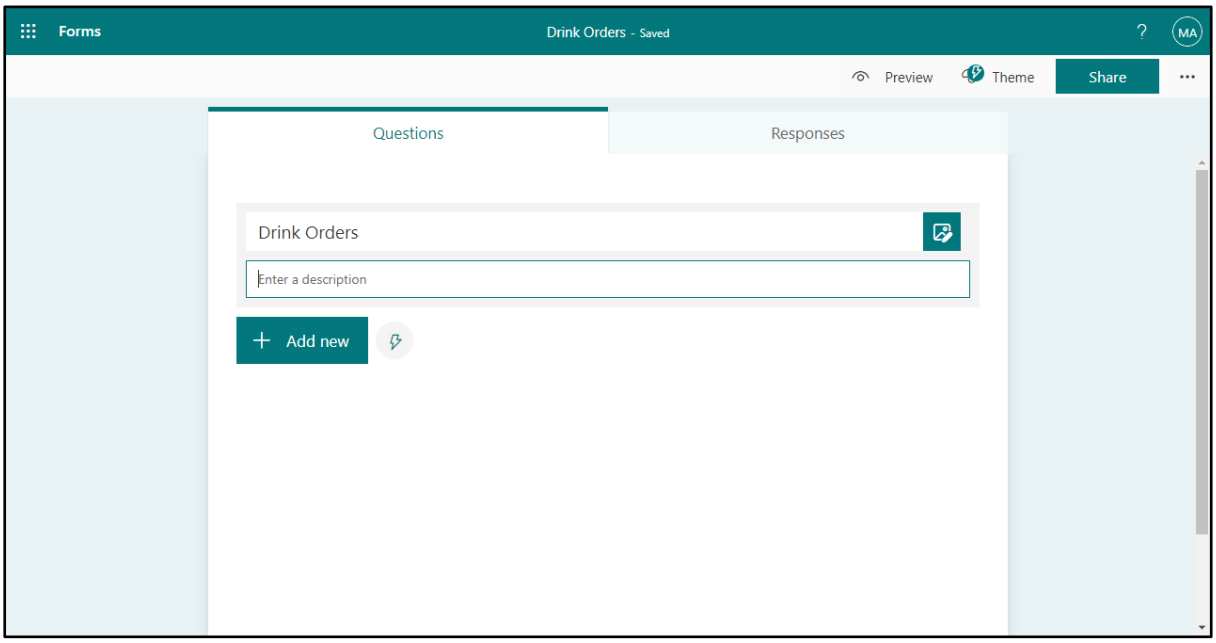

4. Click **Untitled form** text on the page**.**

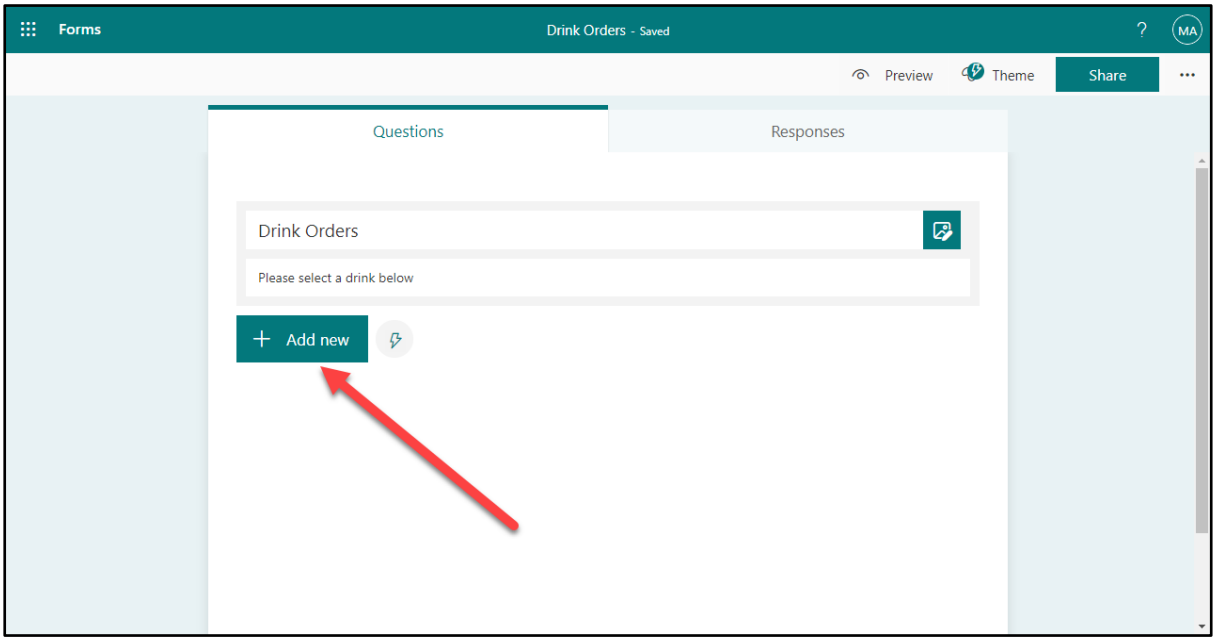

5. Change the **Untitled form** text to **Drink Orders.**

Copyright © 2021. All rights reserved

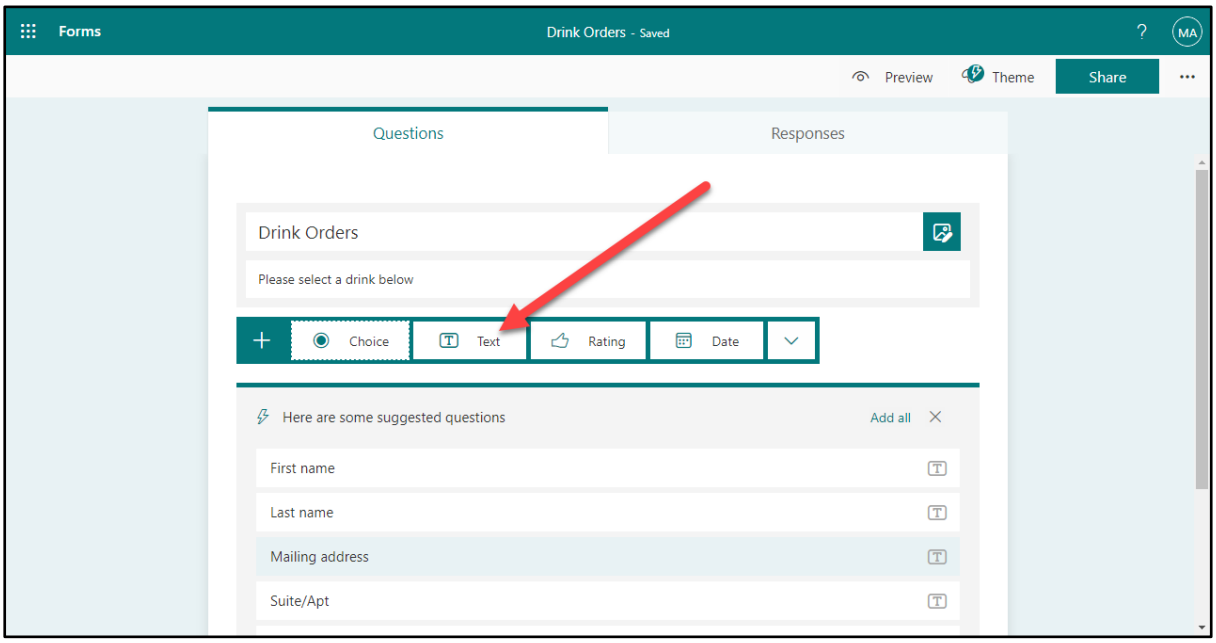

6. Click the **Enter a description** field and change it to **Please select a drink below.**

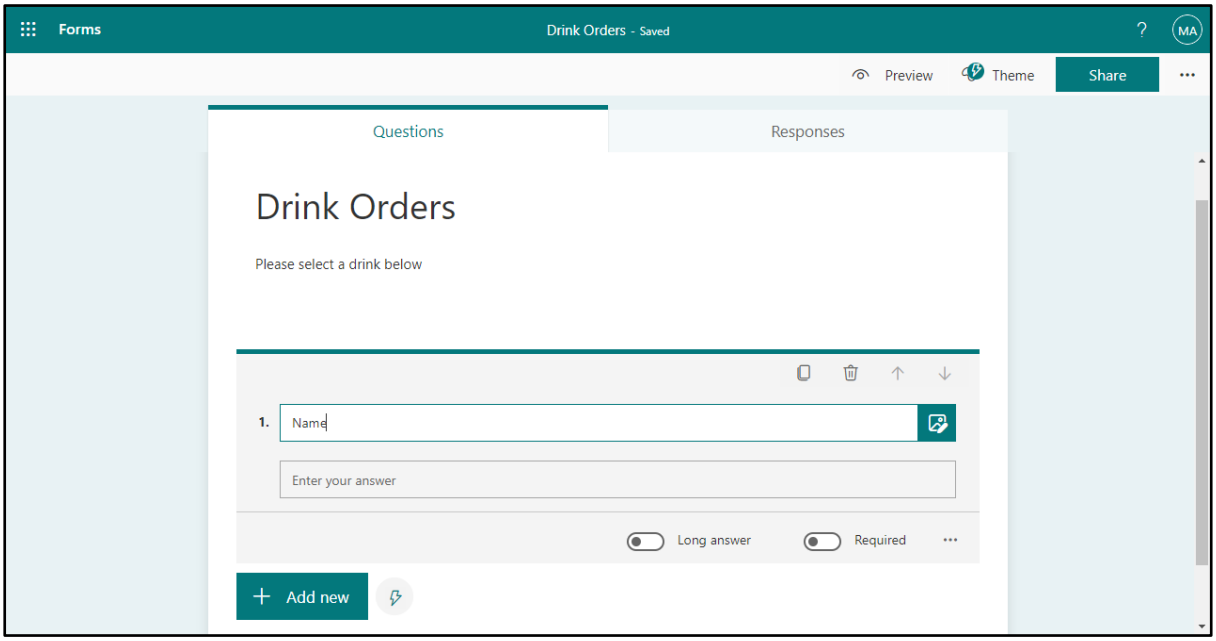

Question 1

7. Click the **Add New** button to add a question to the Form.

Copyright © 2021. All rights reserved

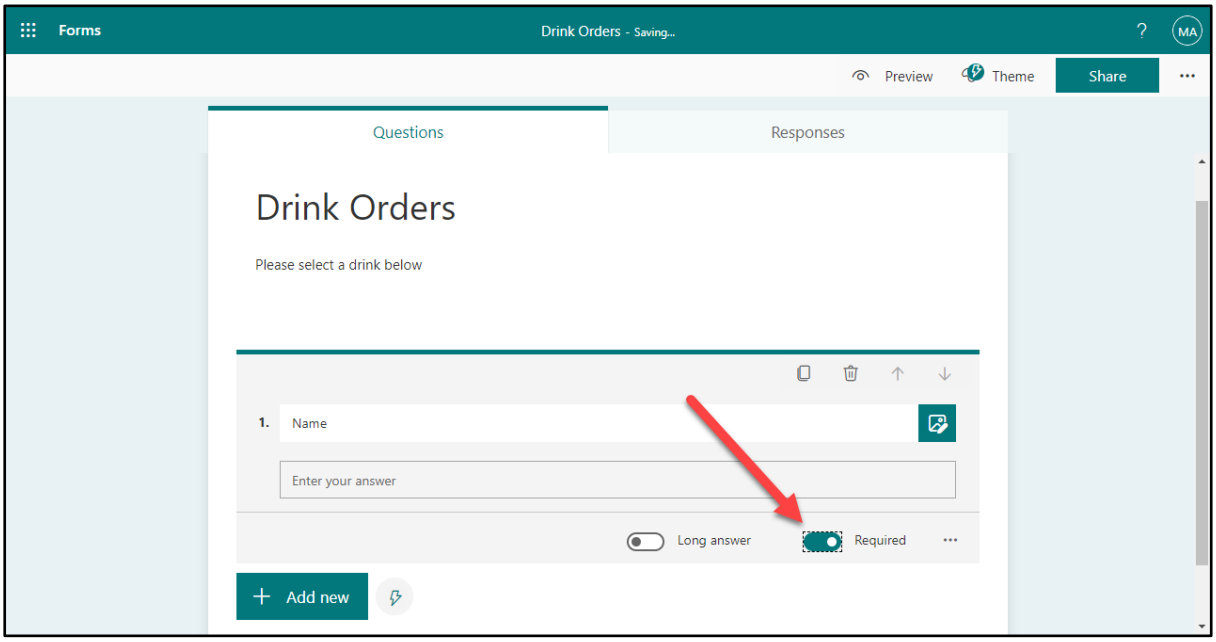

8. Choose **Text** option from the list that appears.

9. Replace **Question** text with **Name.**

Copyright © 2021. All rights reserved

10. Select **Required** toggle to **on.**

Question 2

11. Click the **Add New** button again.
12. Choose **Text** option from the list.
13. Replace **Question** with **Email.**
14. Select **Required** toggle to **on** (toggle may be defaulted to **on**).

Question 3

15. Click the **Add New** button.
16. Choose **Choice** option.
17. Replace **Question** with **Drink.**
18. Replace **Option 1** with **Caffe Latte**
19. Replace **Option 2** with **Cappuccino**
20. Click the **Add option** button
21. Replace **Option 3** with **Flat White**
22. Click the **Add option** button
23. Replace **Option 4** with **Tea**
24. Click the **Add option** button
25. Replace **Option 5** with **Chai Tea**
26. Click the **Add option** button
27. Replace **Option 6** with **Hot Chocolate**
28. Select **Required** toggle to **on** (toggle may be defaulted to **on**).
29. Click the **ellipsis** (**…**) button next to the Required toggle and choose **Drop Down.**

Copyright © 2021. All rights reserved

Question 4

30. Click the **Add New** button.
31. Choose **Choice** option.
32. Replace **Question** with **Size.**
33. Replace **Option 1** with **Small**
34. Replace **Option 2** with **Medium**
35. Click the **Add option** button
36. Replace **Option 3** with **Large**
37. Select **Required** toggle to **on** (toggle may be defaulted to **on**).
38. Click the **ellipsis** (**…)** button next to the Required toggle and choose **Drop Down.**

Question 5

39. Click the **Add New** button.
40. Choose **Text** option.
41. Replace **Question** with **Sugar.**
42. Select **Required** toggle to **on** (toggle may be defaulted to **on**).
43. Click the **ellipsis** (**…)** button next to the Required toggle and choose **Restrictions.**
44. From the Restrictions drop down select **Greater than or equal to**
45. Change the value from **1** to **0**

Question 5

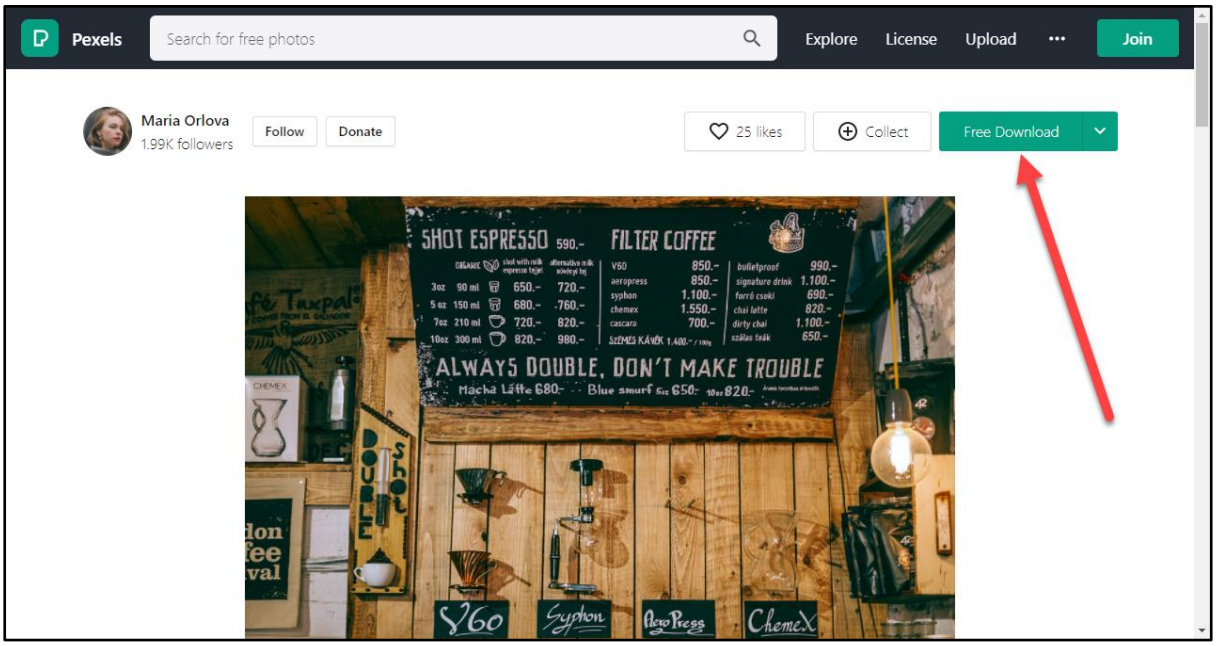

46. Click the **Add New** button.
47. Choose **Choice** option.
48. Replace **Question** with **Milk.**
49. Replace **Option 1** with **Full Cream**
50. Replace **Option 2** with **Low Fat**
51. Click the **Add option** button
52. Replace **Option 3** with **Soy**
53. Click the **Add option** button
54. Replace **Option 4** with **None**
55. Click the **Add option** button
56. Select **Required** toggle to **on** (toggle may be defaulted to **on**).
57. Click the **ellipsis** (**…)** button next to the Required toggle and choose **Drop Down.**

Formatting.

The form can be re-formatted as desired. The process to achieve it is:

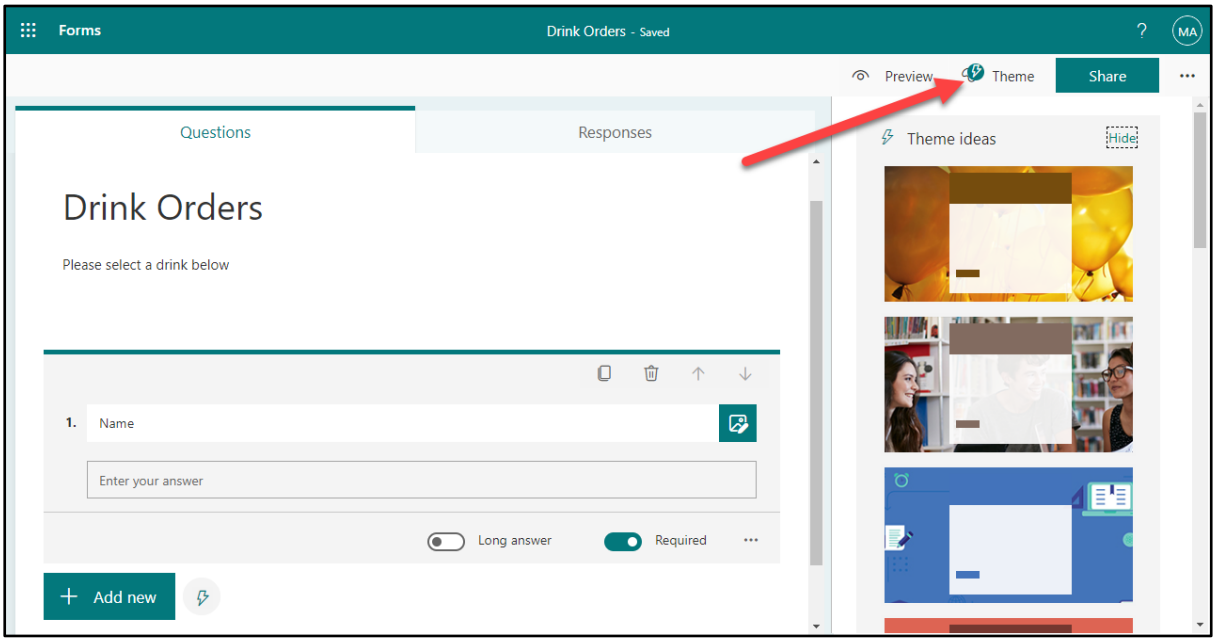

Background Image.

1. If you wish to learn how to customise your Form then visit:

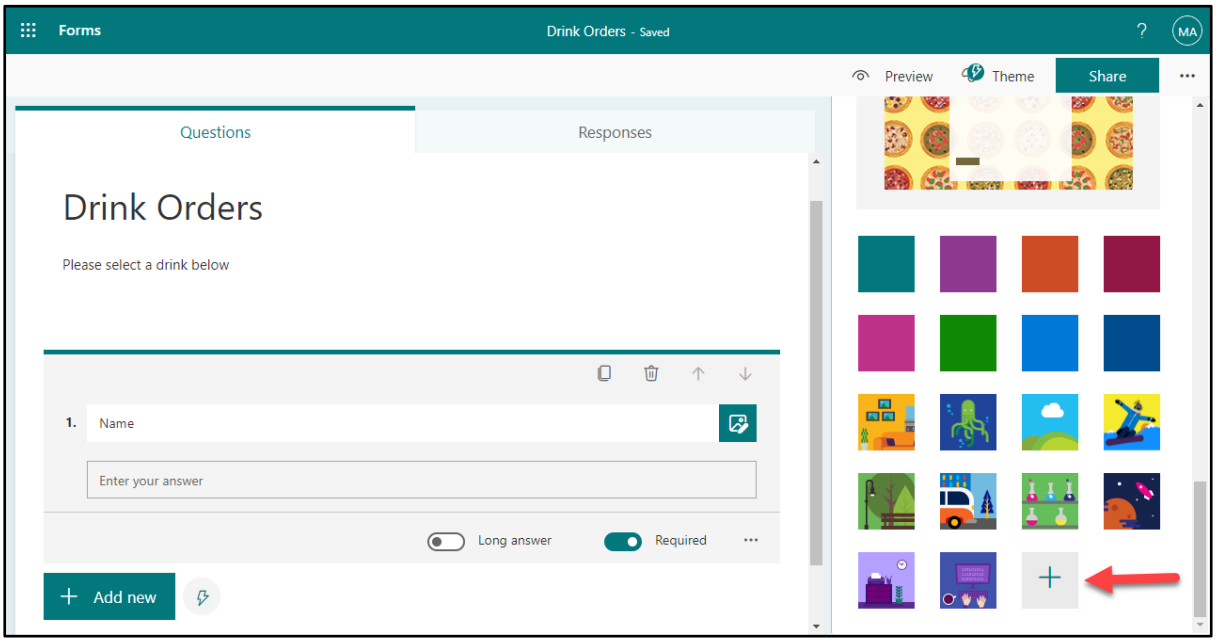

https://support.microsoft.com/en-ie/office/change-a-form-theme-895ca902-833b-4f56-9488-f36480d837ef

to create a custom theme as you see here.

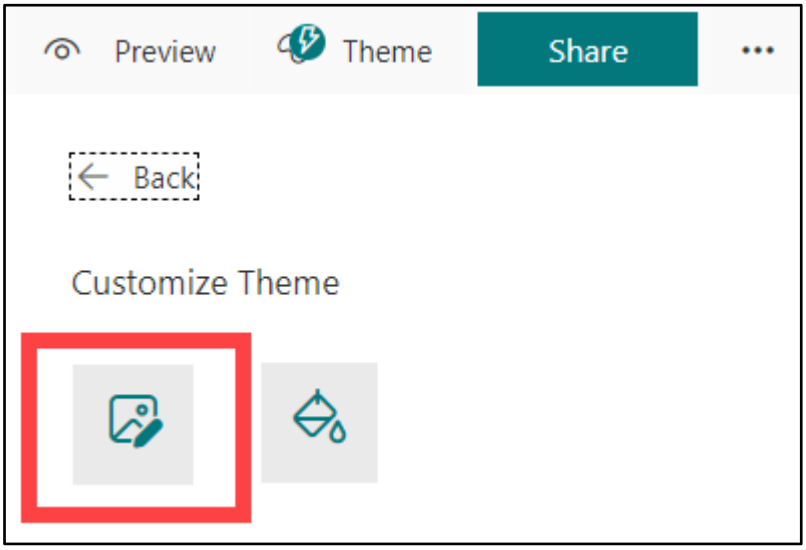

Copyright © 2021. All rights reserved

2. In the top right hand corner of your form select **Theme.**

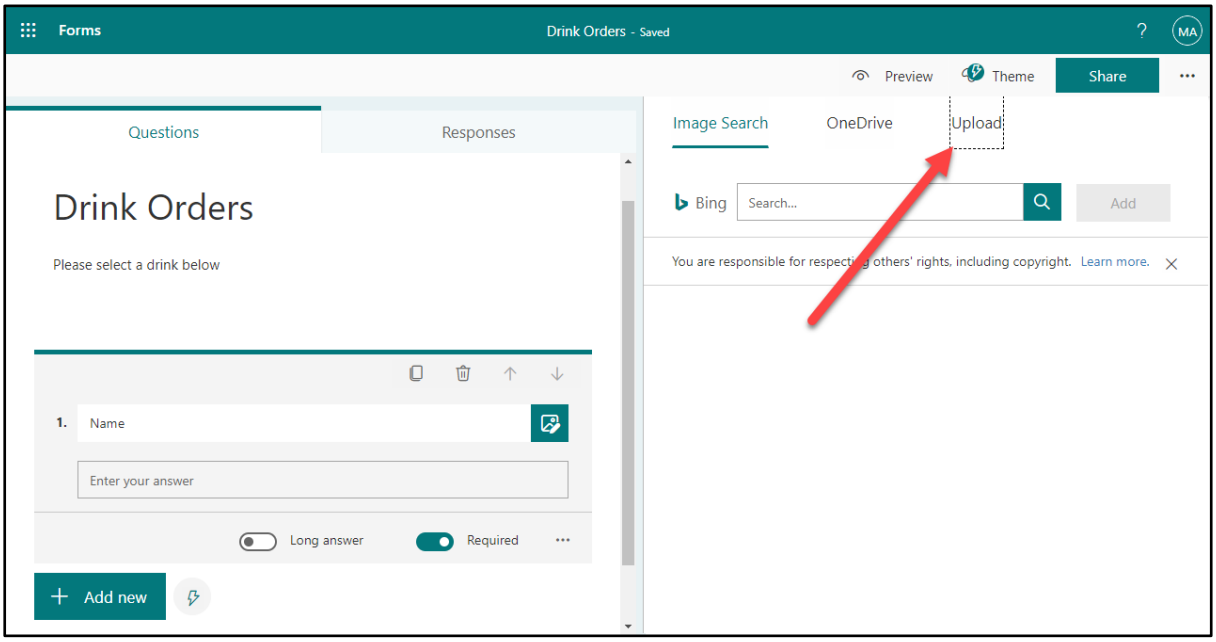

3. Scroll to the bottom of the theme panel on the right and click + (**plus)** sign to create a customised theme**.**

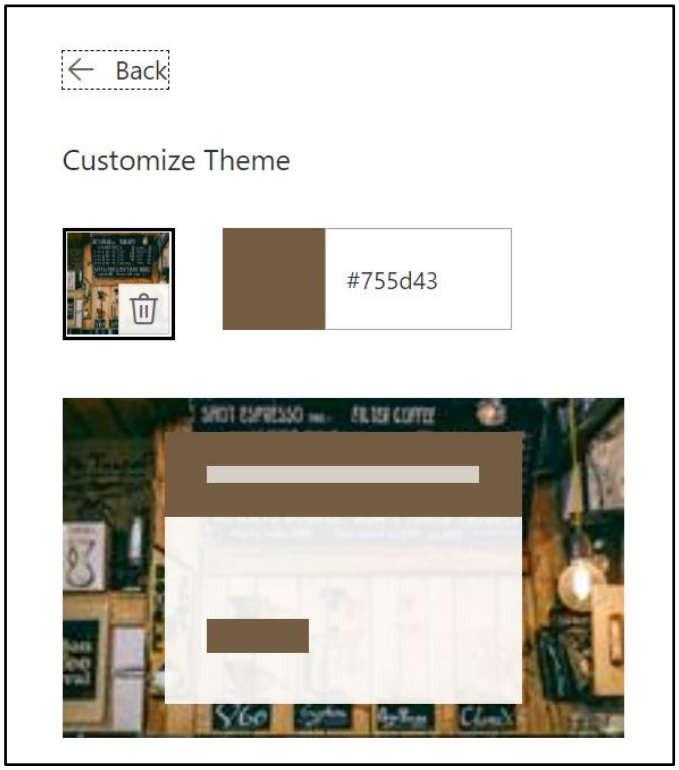

4. Choose the first icon (**Upload Image)**

Copyright © 2021. All rights reserved

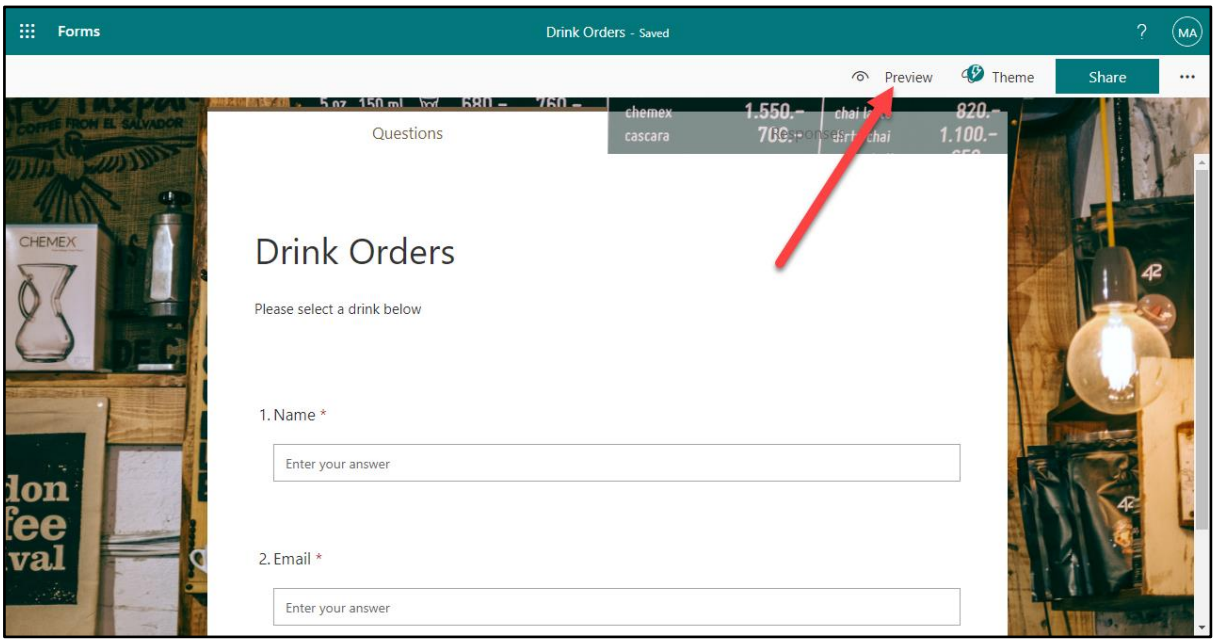

5. Select the **Upload** tab**.**
6. Navigate to the desired background image and select **Open** to upload the file.

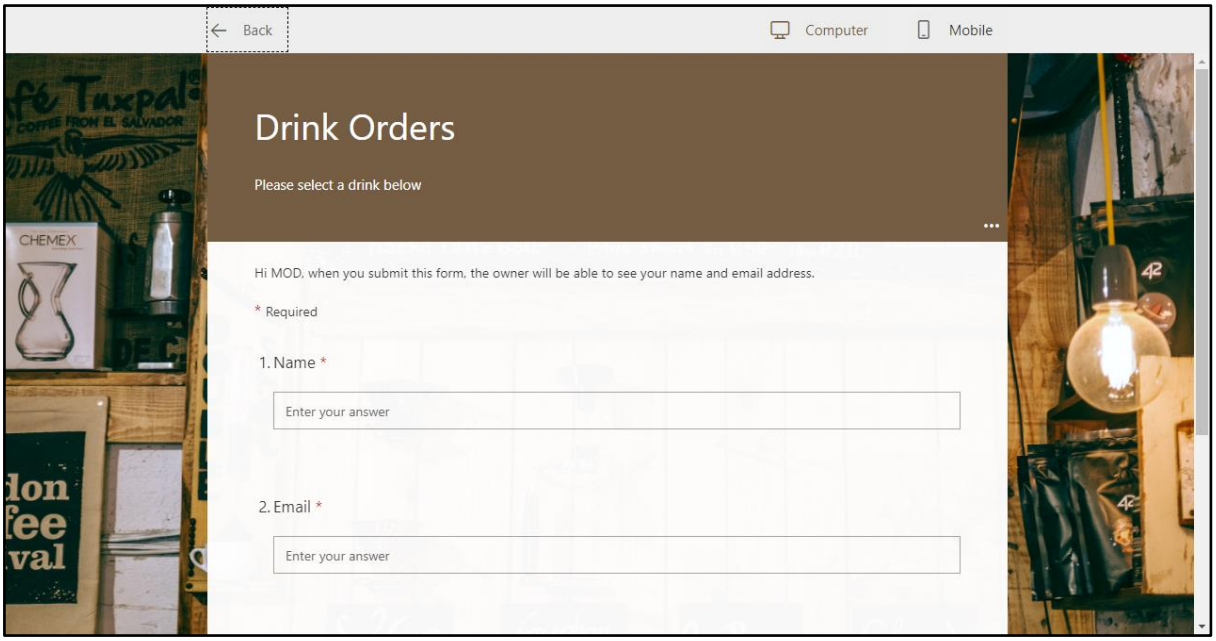

7. **Select** the Brown background colour (**#755d43**).
8. Press the **Back** button.

Copyright © 2021. All rights reserved

View the Form.

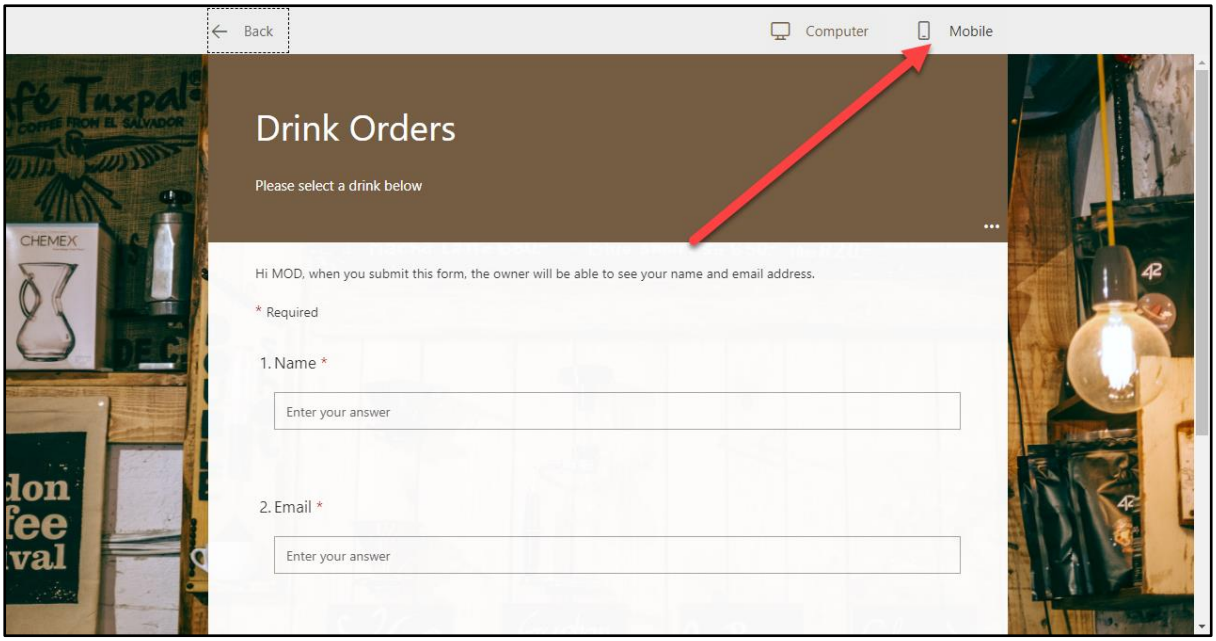

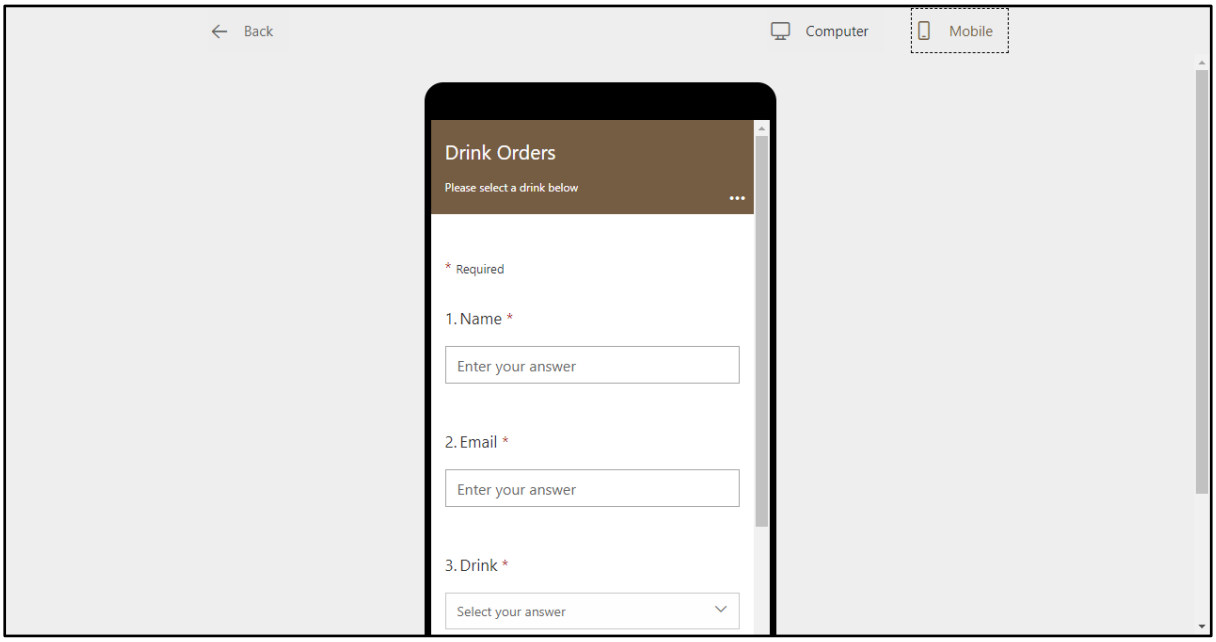

1. Press the **Preview** button at the top right of the Window to view the finished **Form**.

Copyright © 2021. All rights reserved

2. Press the **Mobile** button on the top right-hand corner of the screen to see the **mobile phone** view.

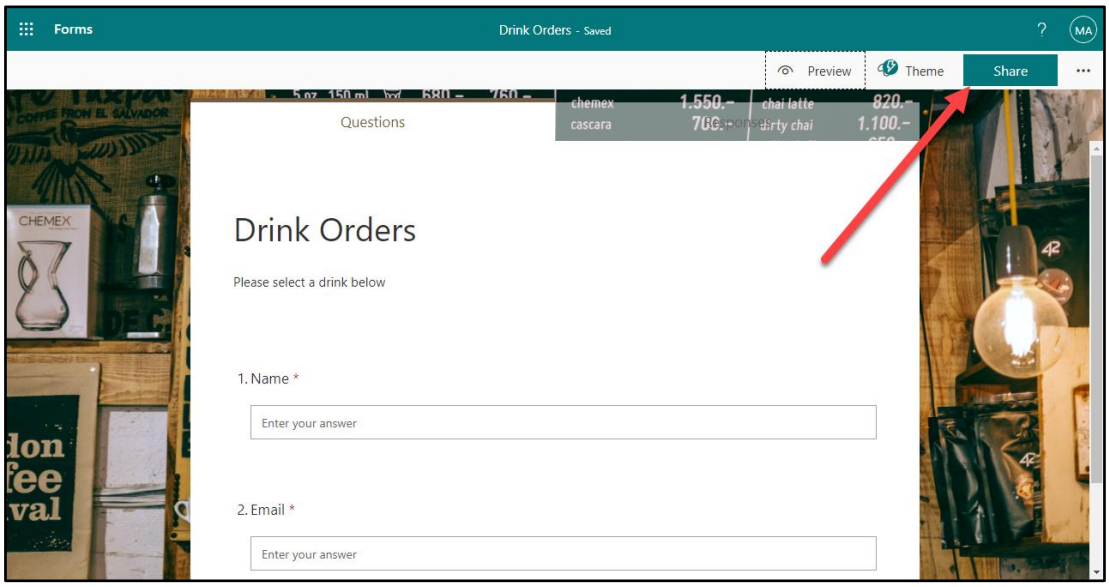

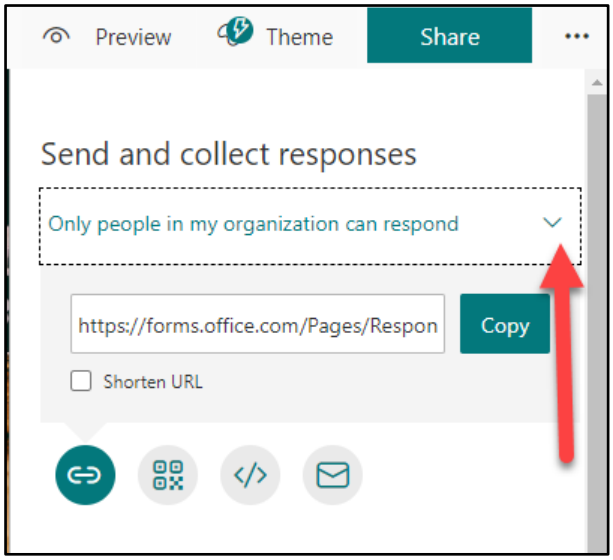

Share the Form

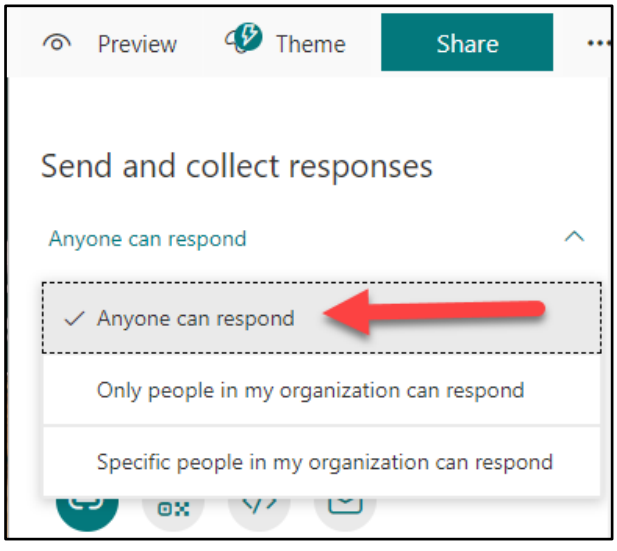

Press the **Share** button **l**ocated top right-hand corner of the screen.

Copyright © 2021. All rights reserved

1. Change the first option to **Anyone can respond.**

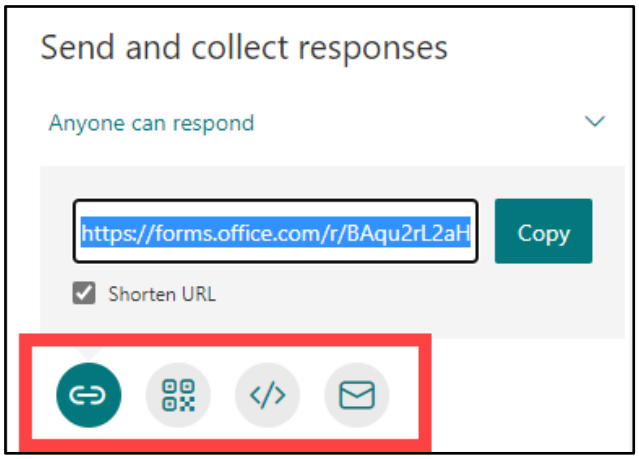

Copyright © 2021. All rights reserved

2. Choose one of the four options to **share.**

   a. Link

   b. QR Code

   c. Embed

   d. Email

Copyright © 2021. All rights reserved

3 SharePoint Lists

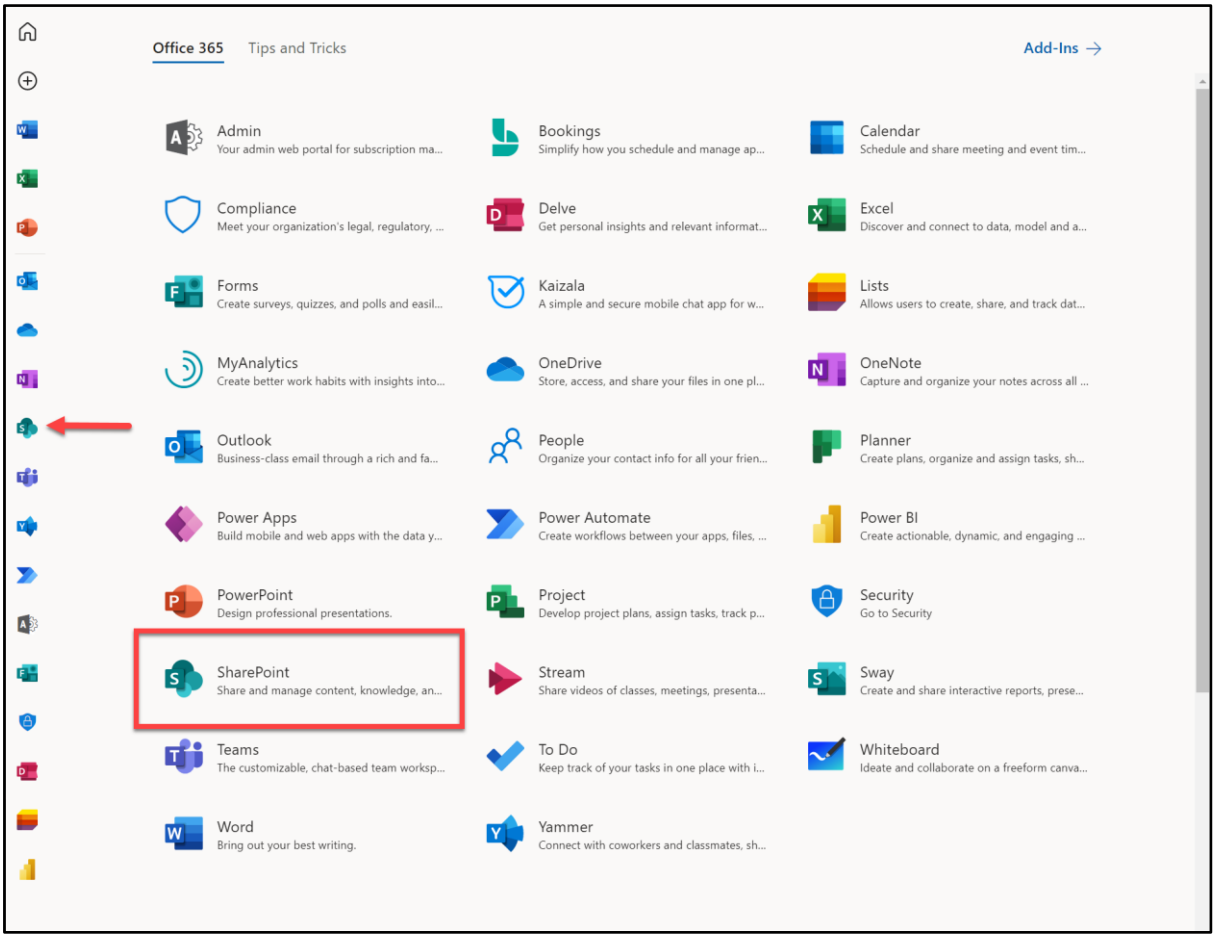

The data obtained from the Microsoft Form will be saved to a SharePoint List.

A number of SharePoint lists need to be created for this process to run successfully. These lists will be referred to by the automation process:

A. OrderDetails – Individual order requests will be stored here once they have been entered using the Microsoft Form created previously.
B. OrderRecipients – Details about those who will receive a summary of all the orders.
C. OrderSettings – Contains automation configuration settings.

SharePoint List Creation.

1. Log into your Microsoft 365 Portal.
2. Click on the **SharePoint** Icon.

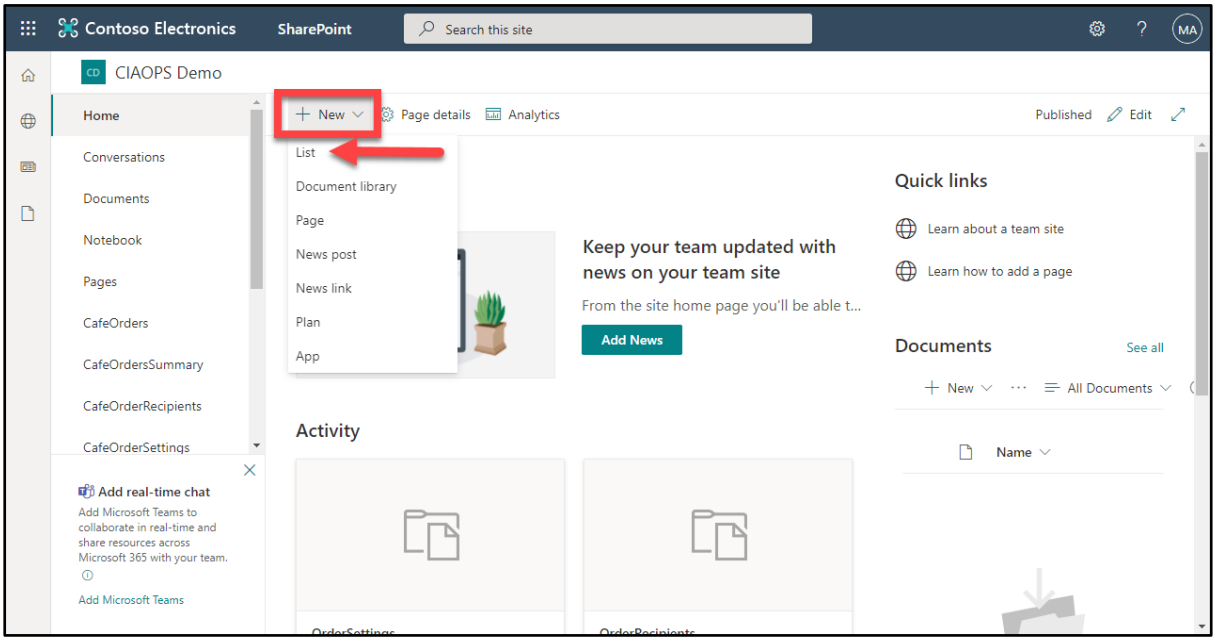

3. The new lists required for this process need to reside in a SharePoint site. This can be any SharePoint site that already exists or a new site you create.
   Choose and navigate to a **SharePoint Site** that you would like the lists stored in.

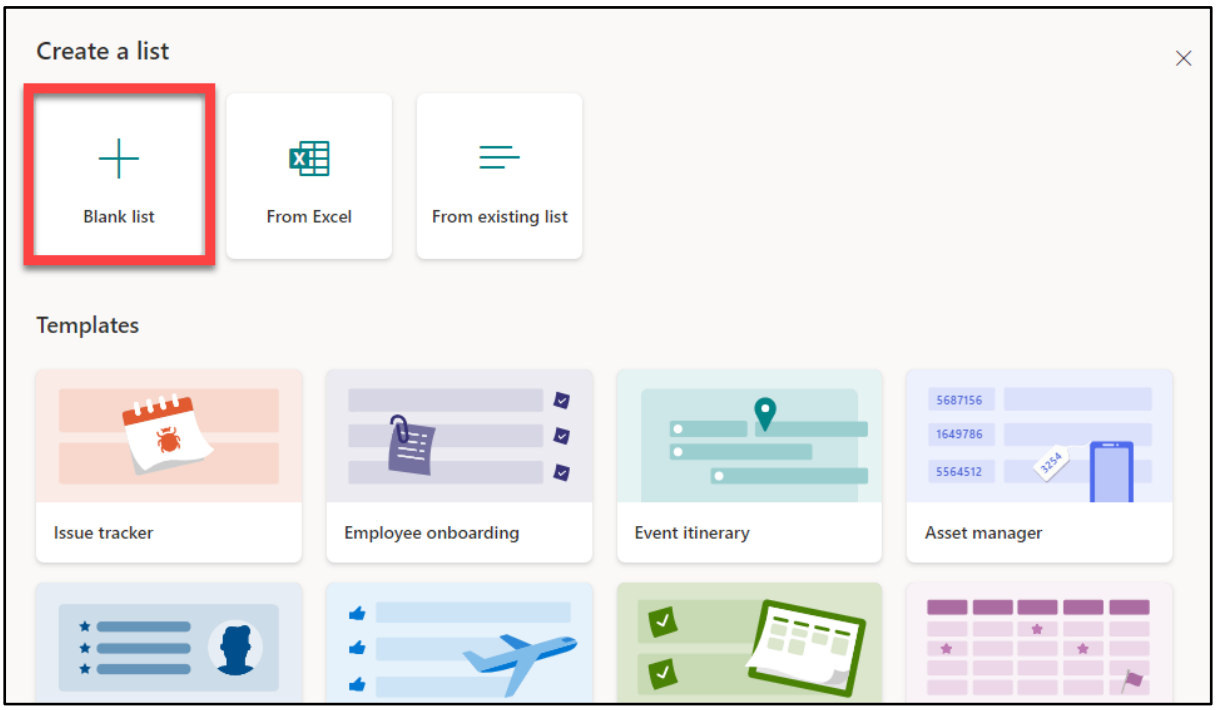

Copyright © 2021. All rights reserved

Note: If you would like the lists visible in Microsoft Teams make sure you choose one of the SharePoint sites that is already part of the Team you wish to use.

4. Once in the SharePoint Site press the **New** button and select **List** from the menu that appears**.**

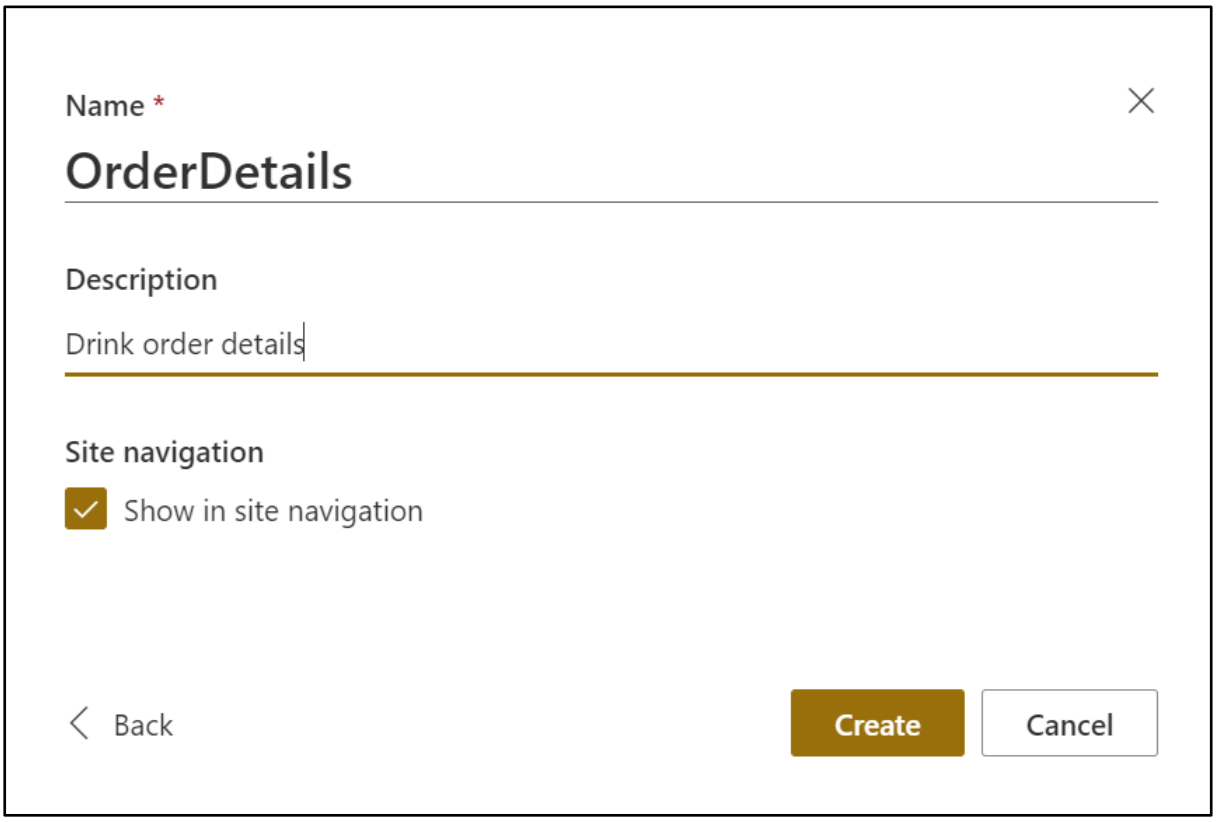

5. Choose **Blank** List.

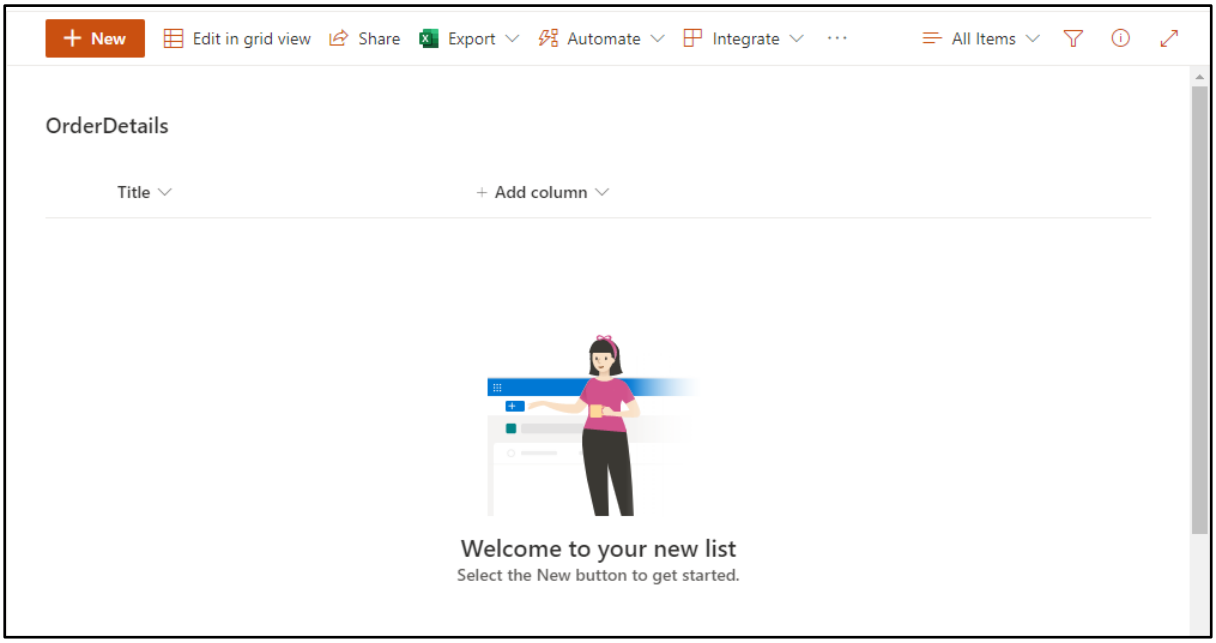

6. Name the list **OrderDetails** and add a **description** then press the **Create** button.

Copyright © 2021. All rights reserved

A new blank list called OrderDetails should now appear in the SharePoint site like so:

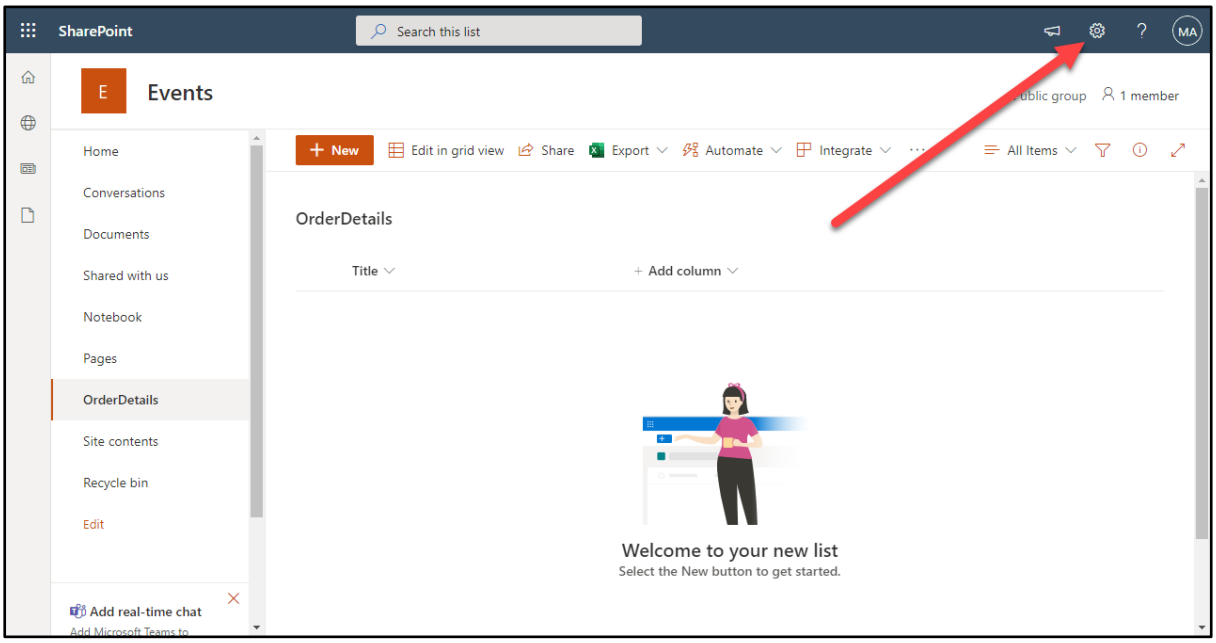

You will also note that the list created is empty and has only a single column called **Title**. For more detailed information about creating lists in SharePoint see:

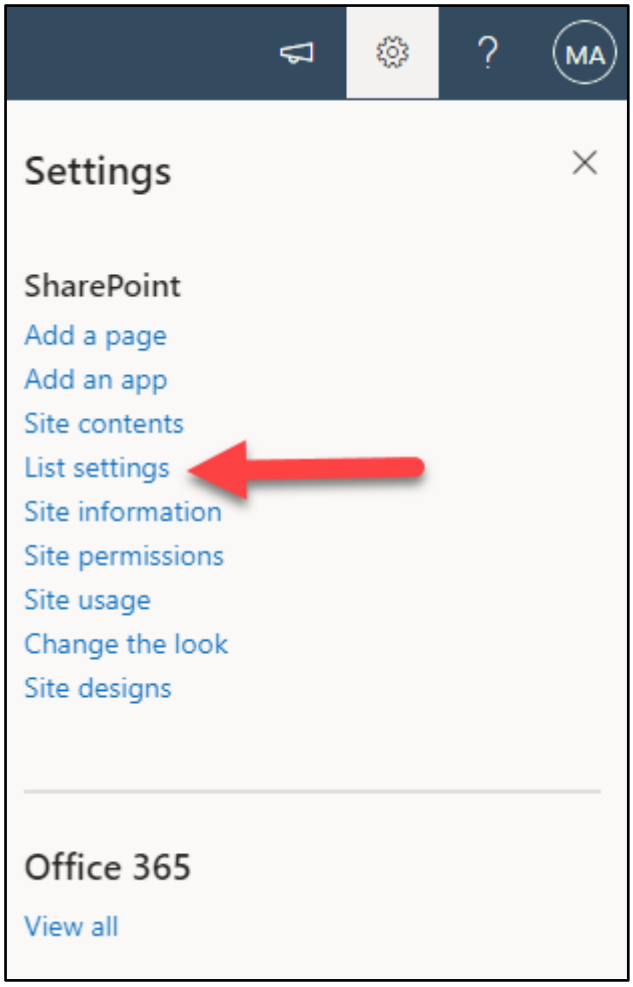

https://support.microsoft.com/en-us/office/create-a-list-0d397414-d95f-41eb-addd-5e6eff41b083

7. With this new List still displayed on the screen, select the **COG** in the top right of the screen as shown:

Copyright © 2021. All rights reserved

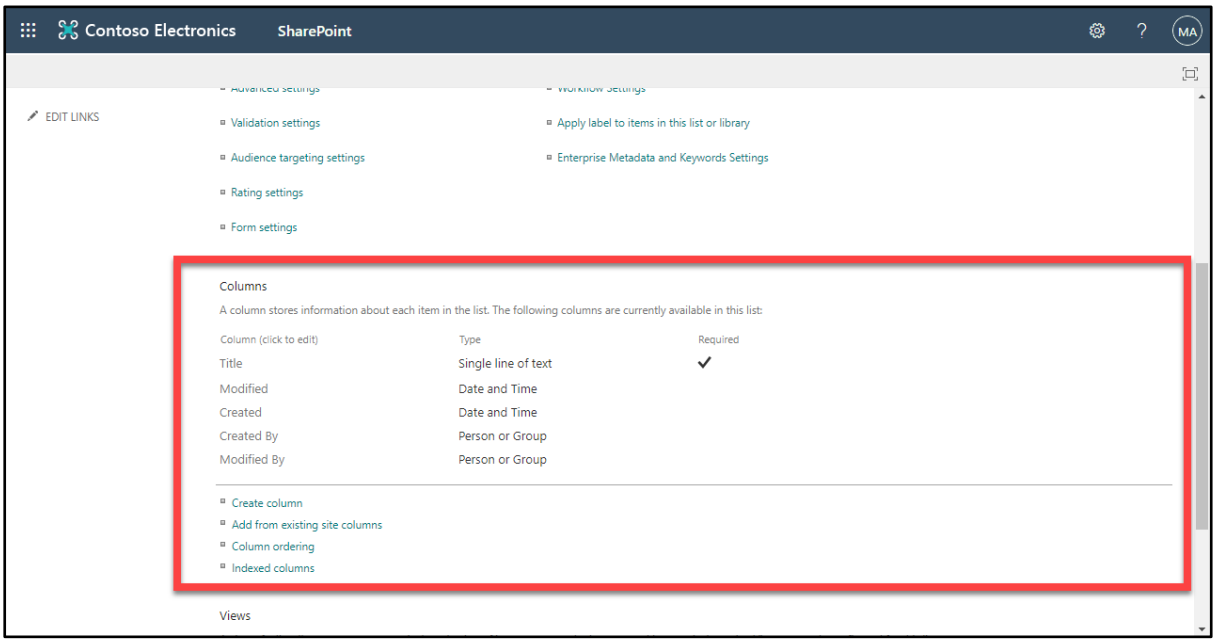

And from the menu that appears select **List Settings**:

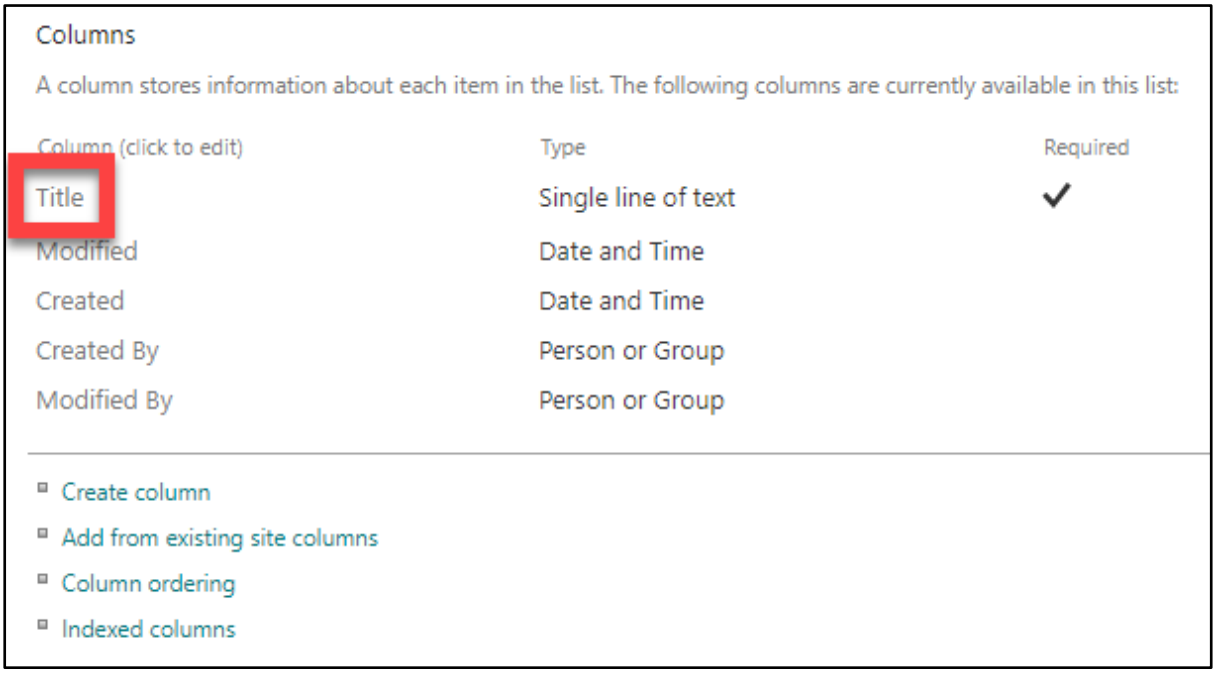

8. Scroll down the page that is displayed until you see the **Columns** section as shown:

Copyright © 2021. All rights reserved

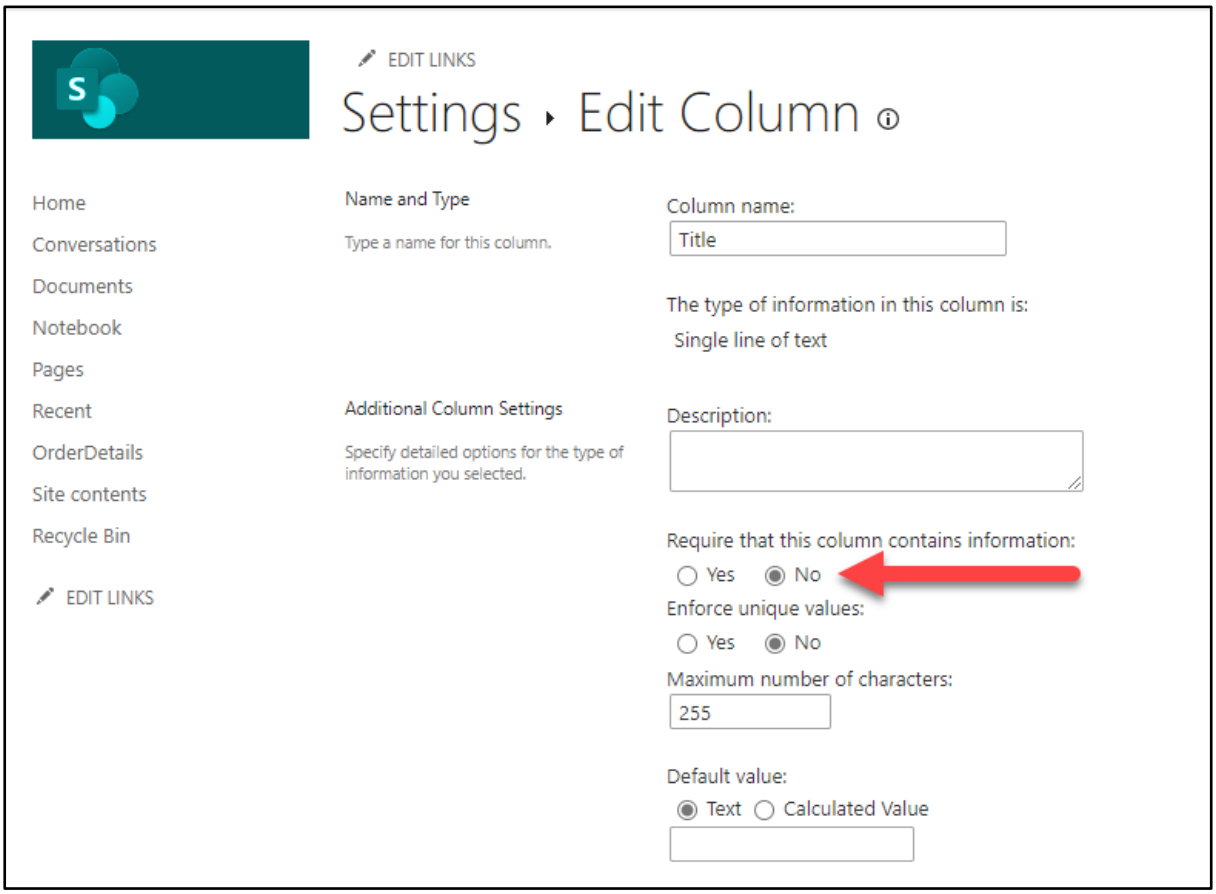

9. In the **Columns** area select the word **Title** as shown:

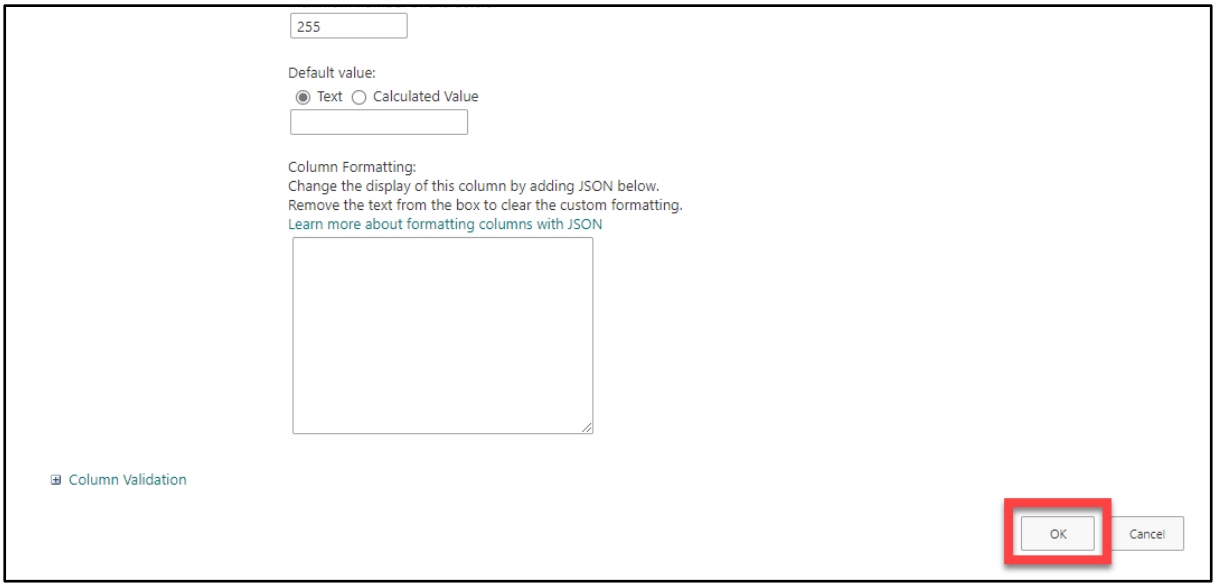

10. Ensure the **Require that this column contain information** field is set to **No** as shown:

Copyright © 2021. All rights reserved

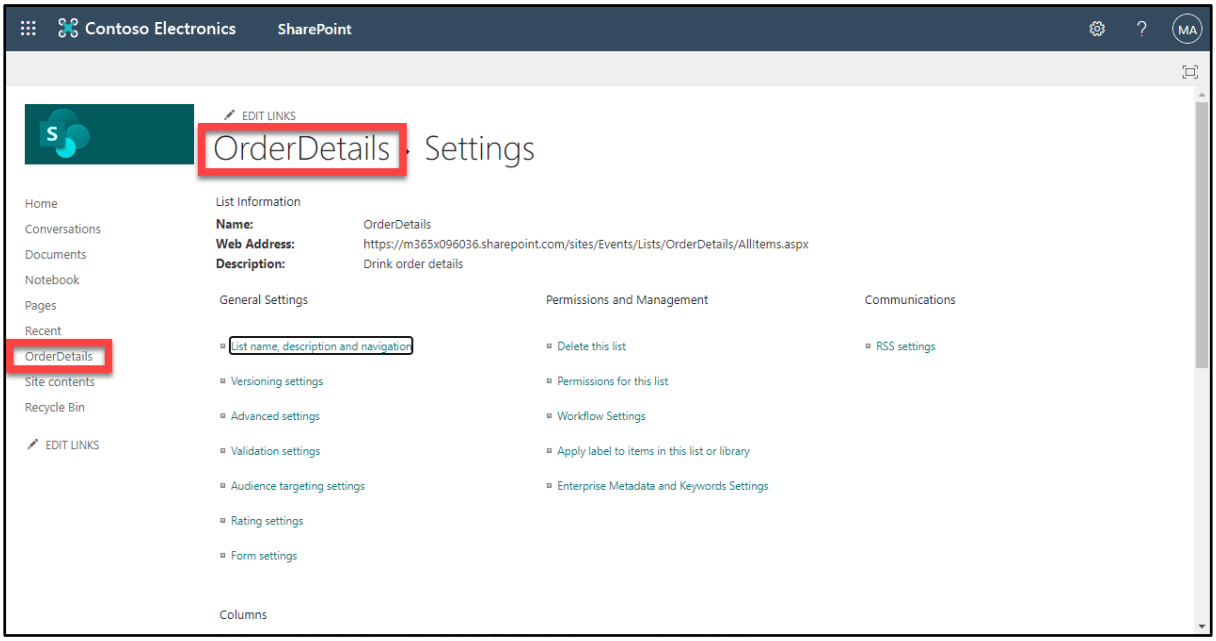

Scroll to the bottom of the page

Select the **OK** button to save any changes.

Copyright © 2021. All rights reserved

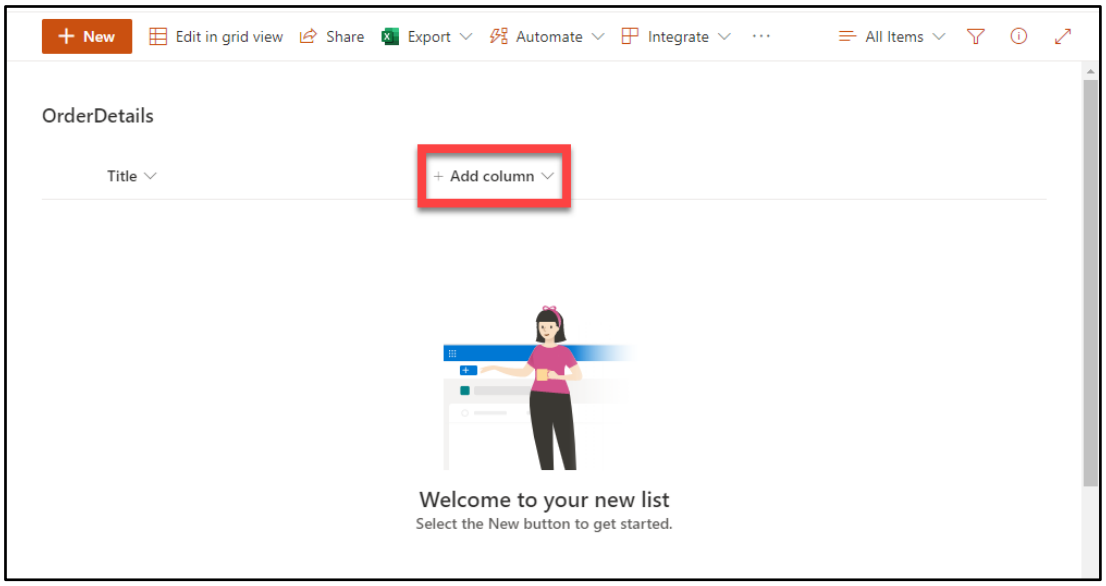

11. Now select the word **OrderDetails** in the header or on the menu on the right to return to the List.

This process will need to be completed on each new list that is created because the **Title** field is not used in this process.

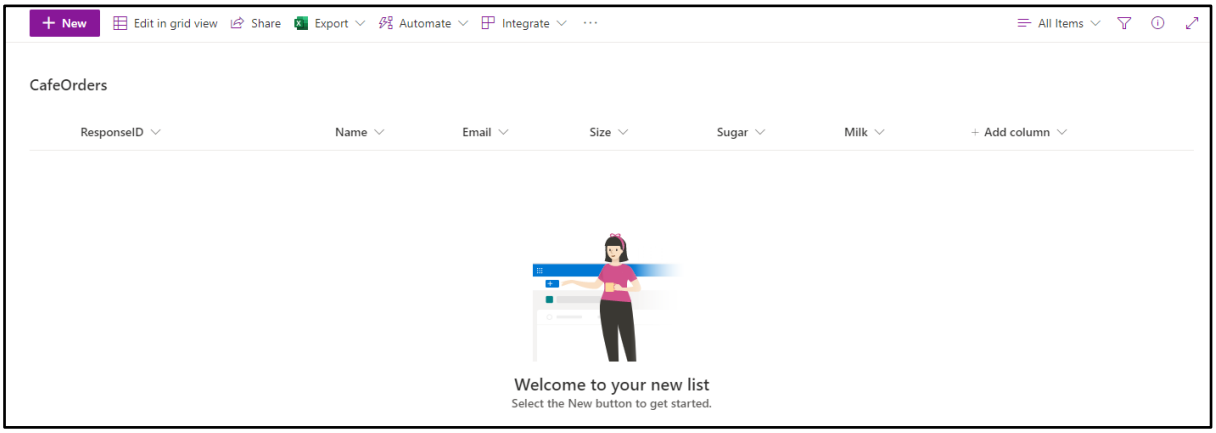

Copyright © 2021. All rights reserved

12. Add the following columns in the **OrderDetails** List by selecting the **Add column** option in the list.

a. Add column – Single line of text – Create Name and Description as **Name** - Save
b. Add column – Single line of text – Create Name and Description as **Email** - Save
c. Add column – Single line of text – Create Name and Description as **Drink** - Save
d. Add column – Single line of text – Create Name and Description as **Size** – Save
e. Add column – Number – Create Name and Description as **Sugar**
   – Change Number of decimal places to **0.**
   – **Save**
f. Add column – Single line of text – Create Name and Description as **Milk** – Save

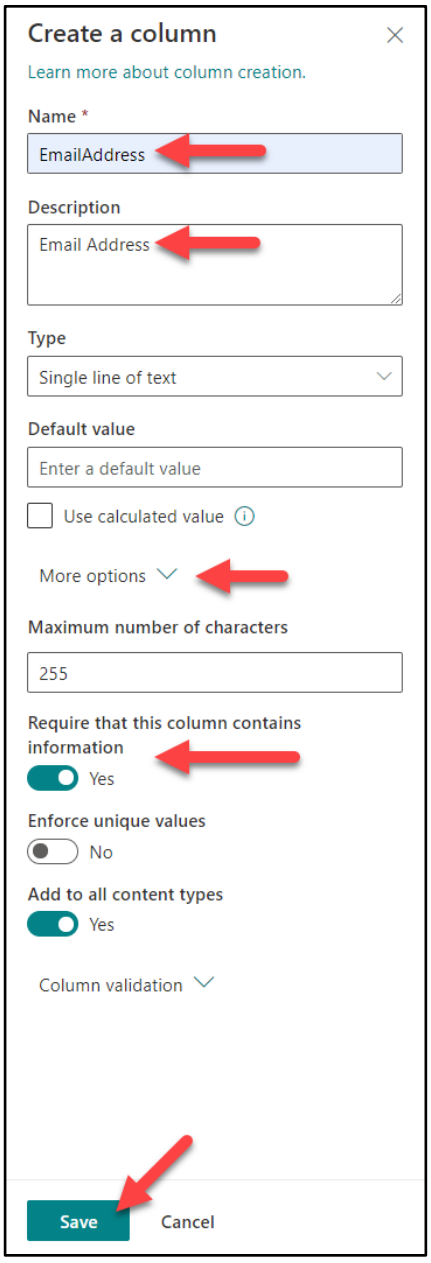

The final result should look something like:

Copyright © 2021. All rights reserved

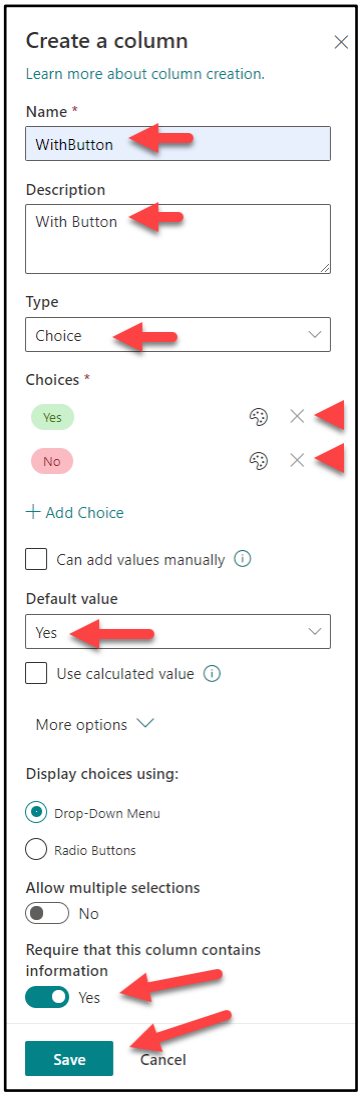

13. Create another list called **OrdersRecipients.** (Note: You may need to click on the Home section of the SharePoint site in order to create a new List). You will need to repeat the process above of ensuring the Title field is not required.

14. Create the **fields** in this list as follows.
    1. i. Add column – **Single line of text**
       ii. Create Name and Description as **EmailAddress**
       iii.Open **More Options** and turn on **Require that this column contains information**
       iv. **Save**

Copyright © 2021. All rights reserved

15. i. Add column – **Choice**
    ii. Create Name and Description as **WithButton**
    iii. Select **Yes** for **Default Value**
    iv. Open **More Options** and turn on **Require that this column contains information**
    v. **Save**

16. After adding the first row to the list the end result should look something like: (Note, it is important you add the email address of everyone you expect to receive the order summary.)

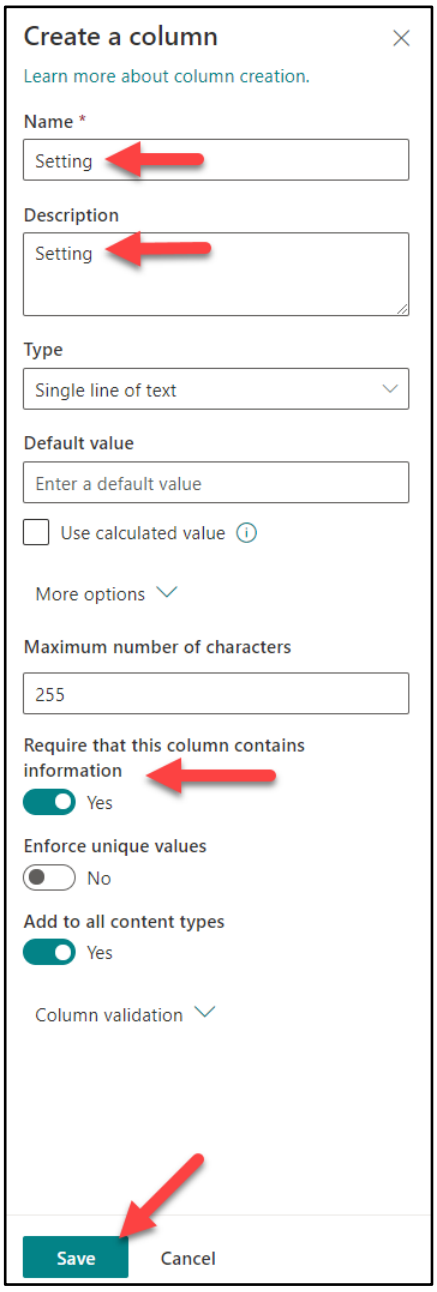

Copyright © 2021. All rights reserved

17. Create another list called **OrdersSettings.** (Note: You may need to click on the Home section of the SharePoint site in order to create a new List). You will need to repeat the process above of ensuring the Title field is not required.

18. Create the **fields** in this list as follows.
    a. i. Add column – **Single line of text**
       ii. Create Name and Description as **Setting**
       iii.Open **More Options** and turn on **Require that this column contains information**
       iv. Save

Copyright © 2021. All rights reserved

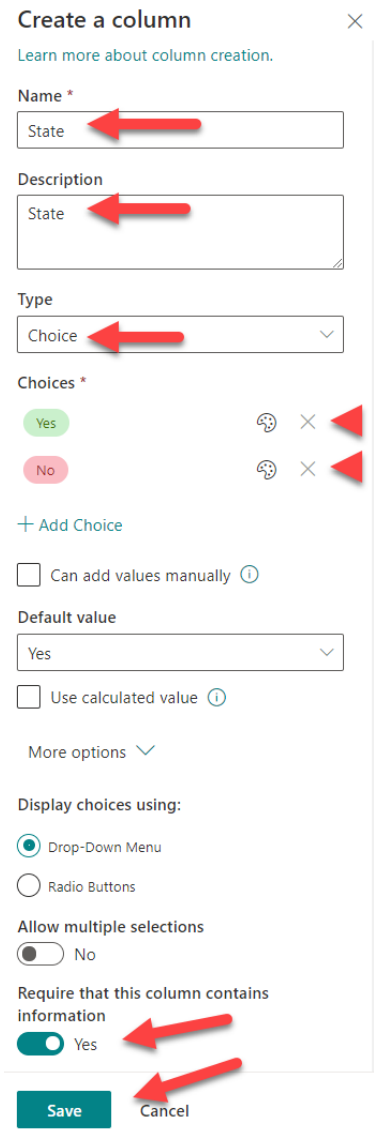

Copyright © 2021. All rights reserved

b. i. Add column – **Choice**
ii. Create Name and Description as **State**

iii. Select **Yes** for **Default Value**

iv. Open **More Options** and turn on **Require that this column contains information**

v. Save

19. After adding the first row to the list the end result should look something like: (note, it is important that a row containing the **FormResponse** setting is included. When it is set to **Yes** then order comfirmation emails will be sent. It should be set to **No** until required).

4 01-CreateOrderDetails

Automated Cloud Flow (Triggered Automatically)

This flow is **automatically** triggered when the user submits the **Microsoft Form.**

The following steps will be run:

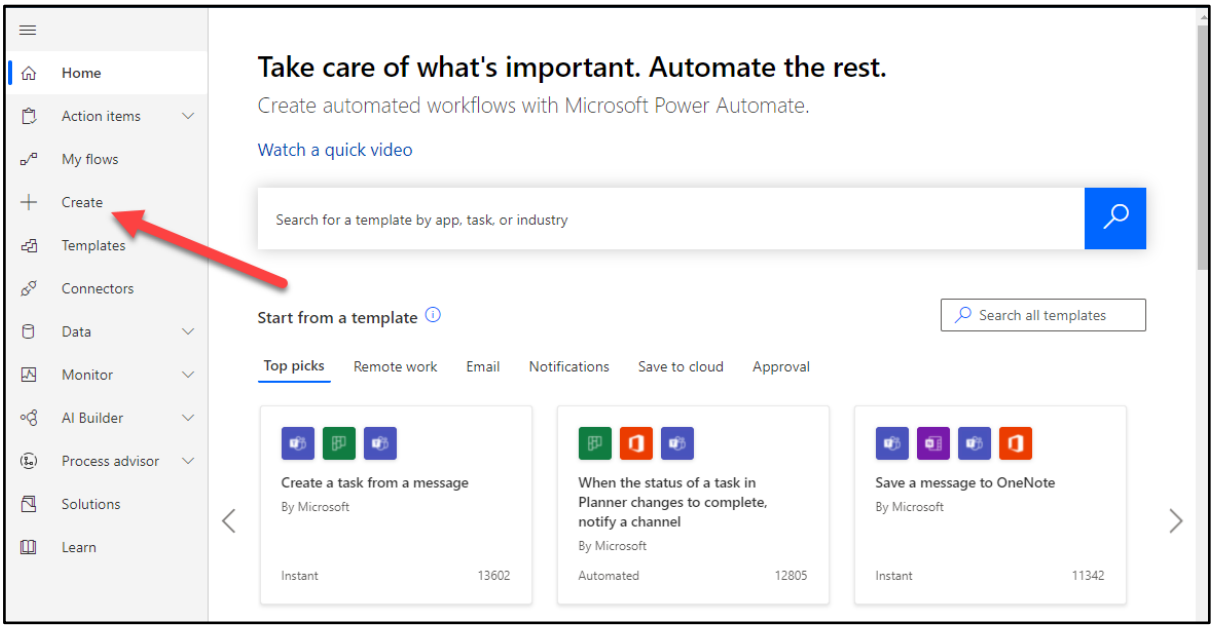

1. Gather the data entered into the Microsoft Form.
2. Format the Sugar field as a numeric value.
3. Add the form data to the DrinkOrders SharePoint List.
4. Retrieve the same item back from the DrinkOrders SharePoint List
5. Create an array.
6. Create a HTML table populating it with that data.
7. Format the HTML table.
8. Send an email confirming the drink order (the HTML table) back to the email address supplied in the form.

Copyright © 2021. All rights reserved

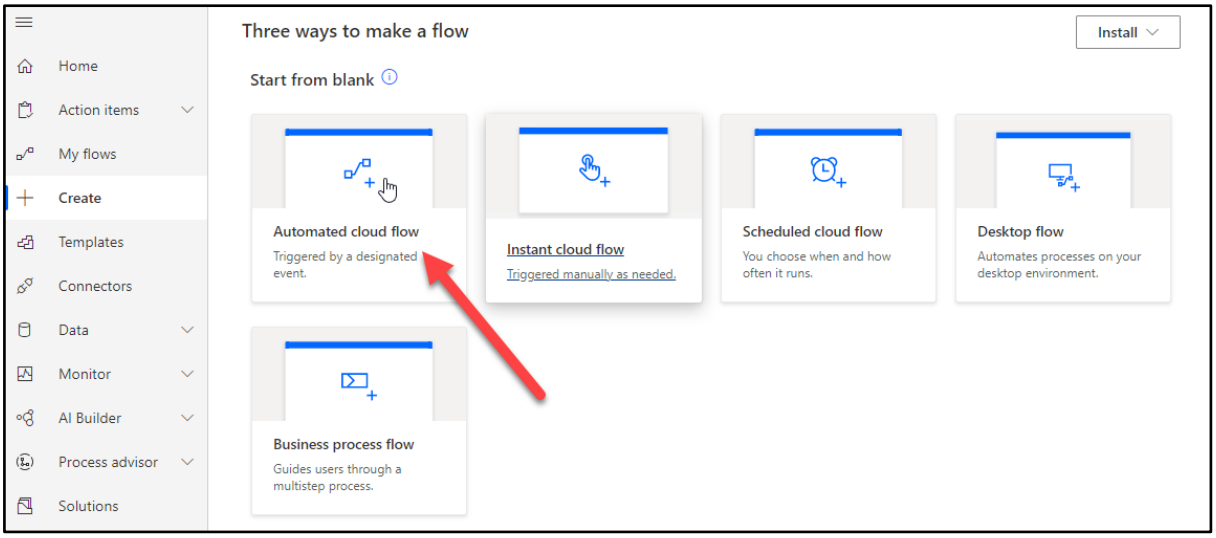

Step 1 : Create the Flow

Log into Microsoft 365 Portal.

Navigate to http://flow.microsoft.com/

Click the **Create** button from the left menu.

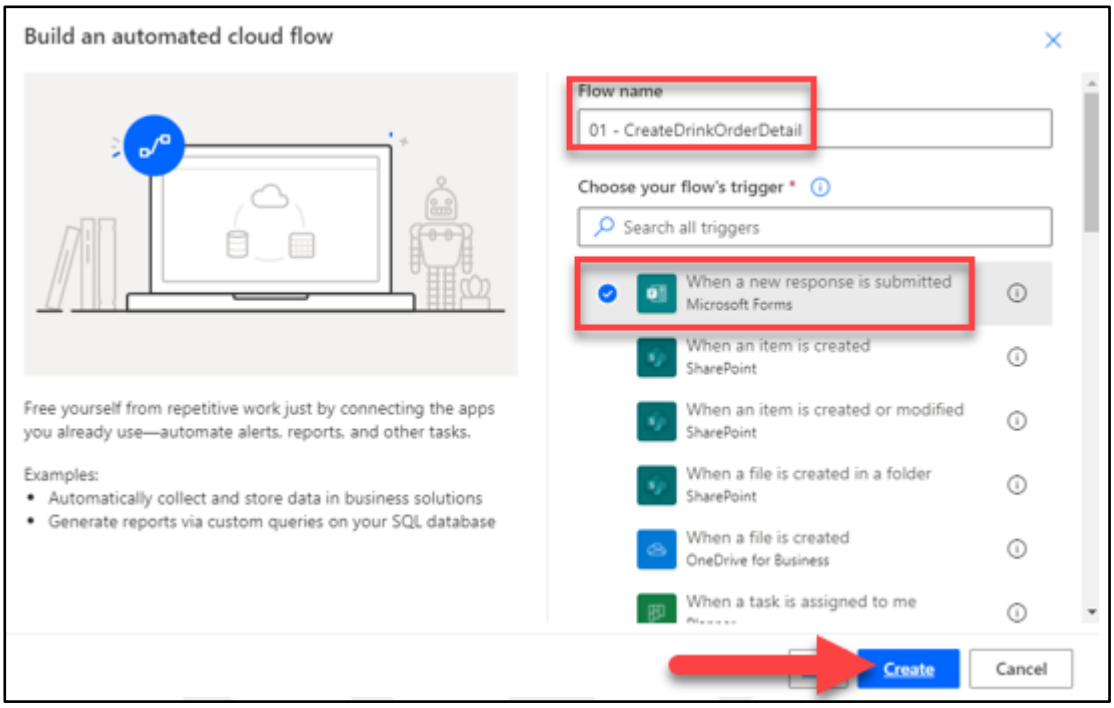

Click the **Automated cloud flow** button under the Start from blank heading.

Name the Flow **01 – CreateDrinkOrderDetail**

Select **When a new response is submitted (Microsoft Forms)**

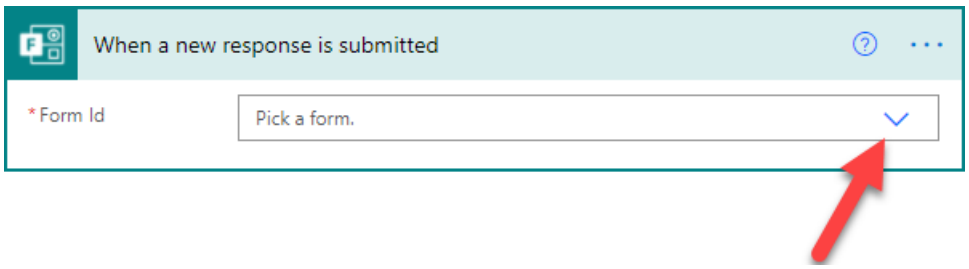

Copyright © 2021. All rights reserved

Press the **Create** button

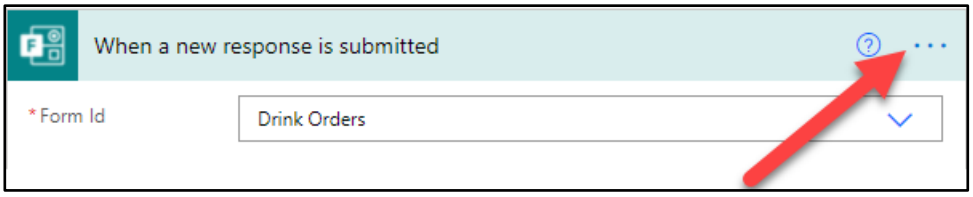

Copyright © 2021. All rights reserved

Step 2 : Gathering Form Data

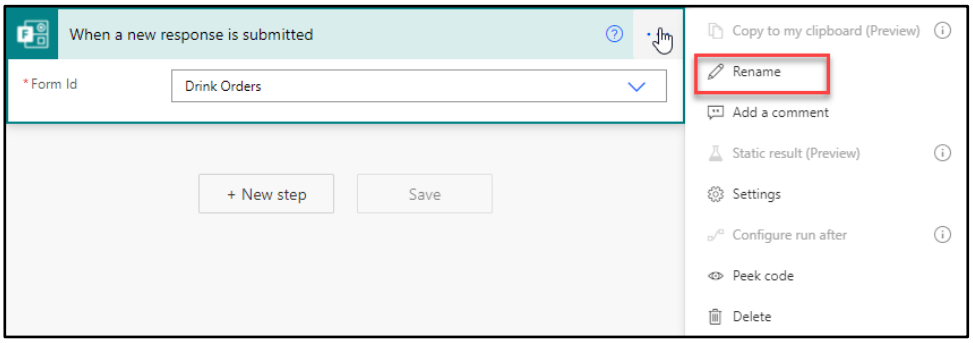

Click on drop down arrow to **Pick a form**

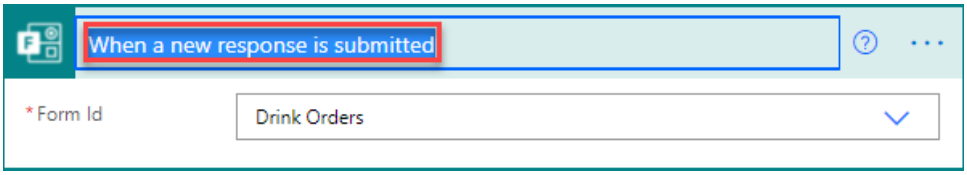

Select **Drink Orders**

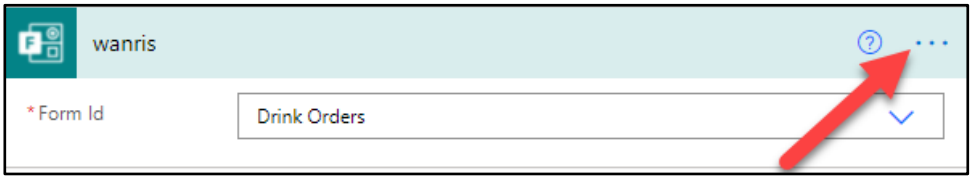

Select the **ellipsis (...)** in the upper right and a menu will appear like so:

Select **Rename**

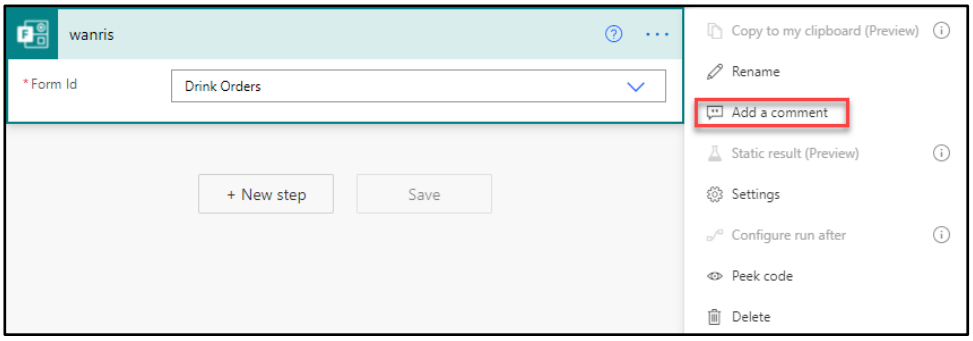

Type **wanris**

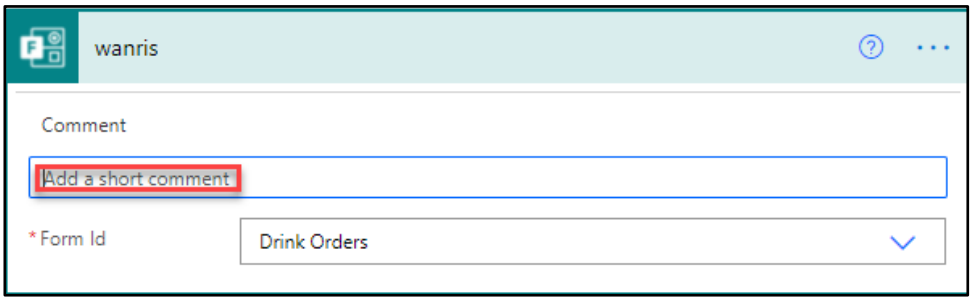

Select the **ellipsis (...)** again

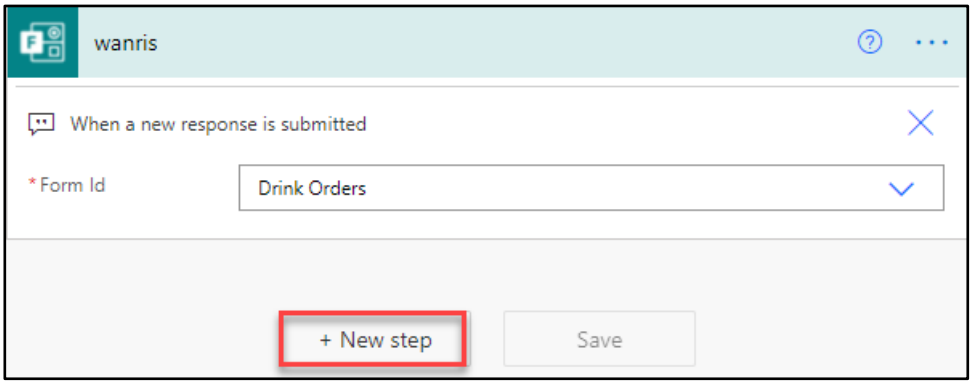

Copyright © 2021. All rights reserved

Now select **Add a comment**

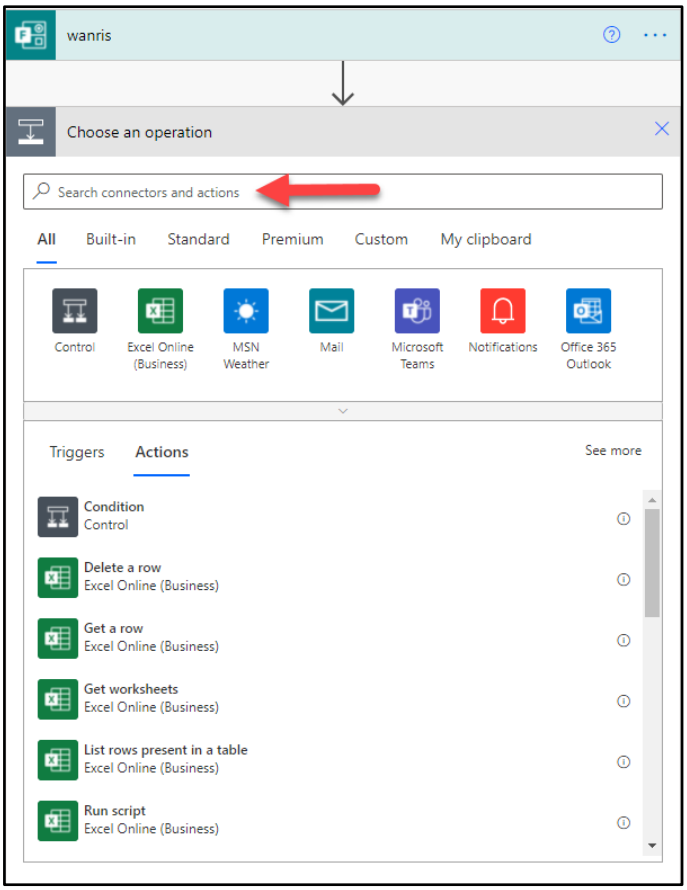

Type **When a new response is submitted**

Click on **+ New step**

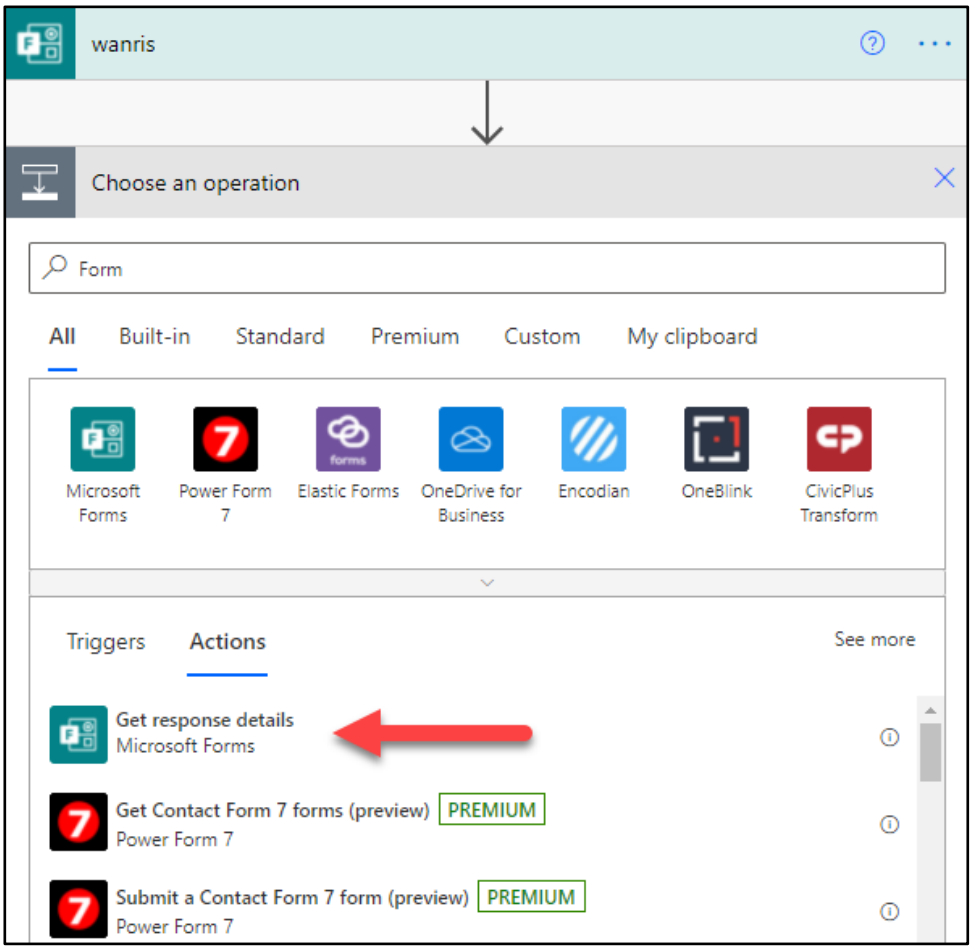

Copyright © 2021. All rights reserved

Step 3 : Get response details

Type in **Form** in the **Search connectors and actions** field.

Copyright © 2021. All rights reserved

Select the **Get response details** from the results displayed below

Rename to **grd**,

Select the **ellipsis (...)** for Get response details

Select **Rename**

Type **grd**

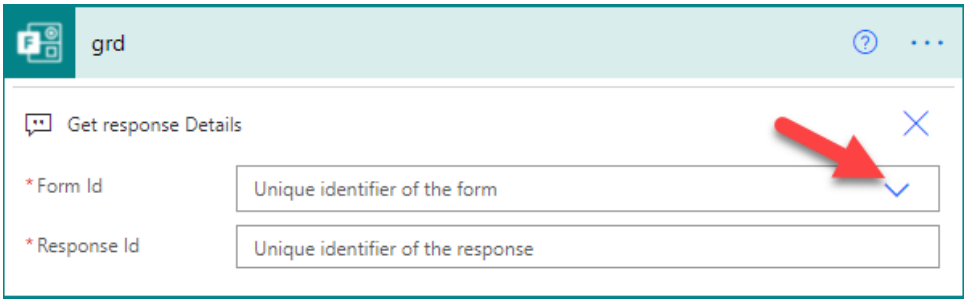

Add **Get response details** as a comment,

Select the **ellipsis (...)** for **grd**

Select **Add a comment**

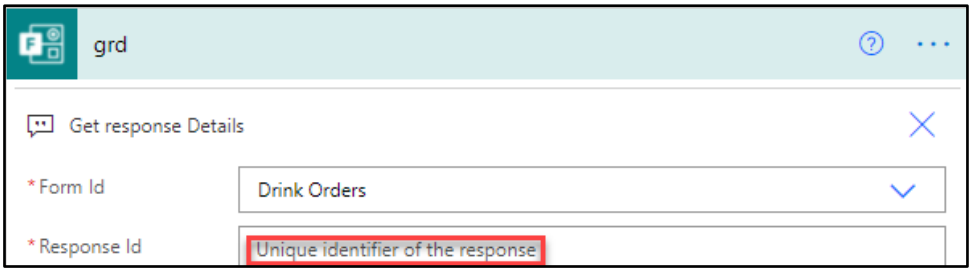

Type **Get response details**

Copyright © 2021. All rights reserved

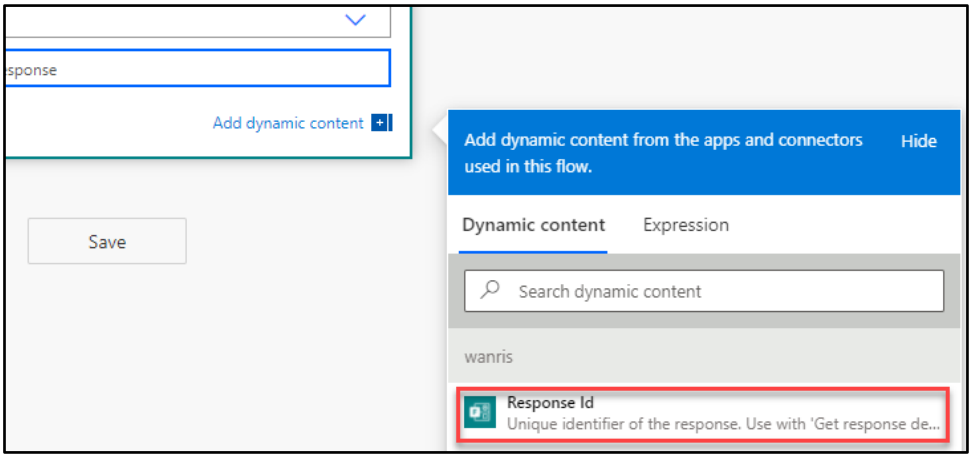

Click on the drop down arrow for **Unique identifier of the form**

Select **Drink Orders** from the list that appears.

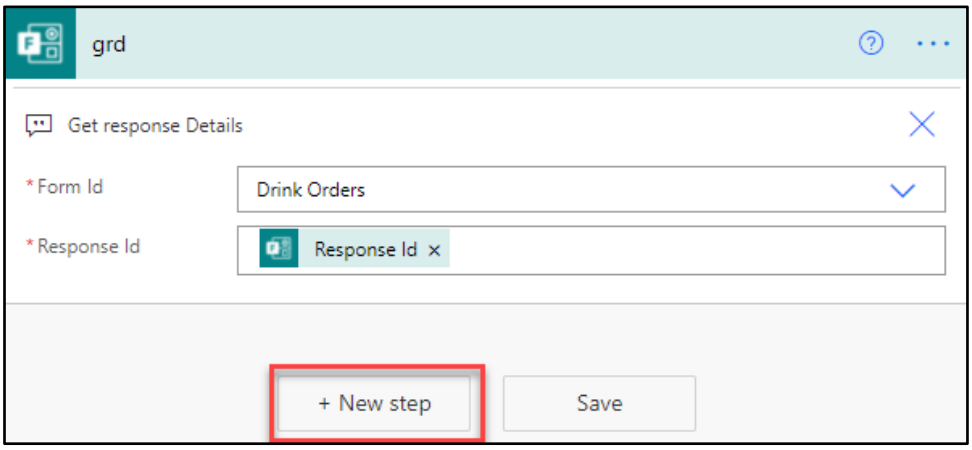

Click in **Unique identifier of the response** box and the option to add dynamic content should appear.

Click on **Response Id** from the list of dynamic content that appears to the right.

Copyright © 2021. All rights reserved

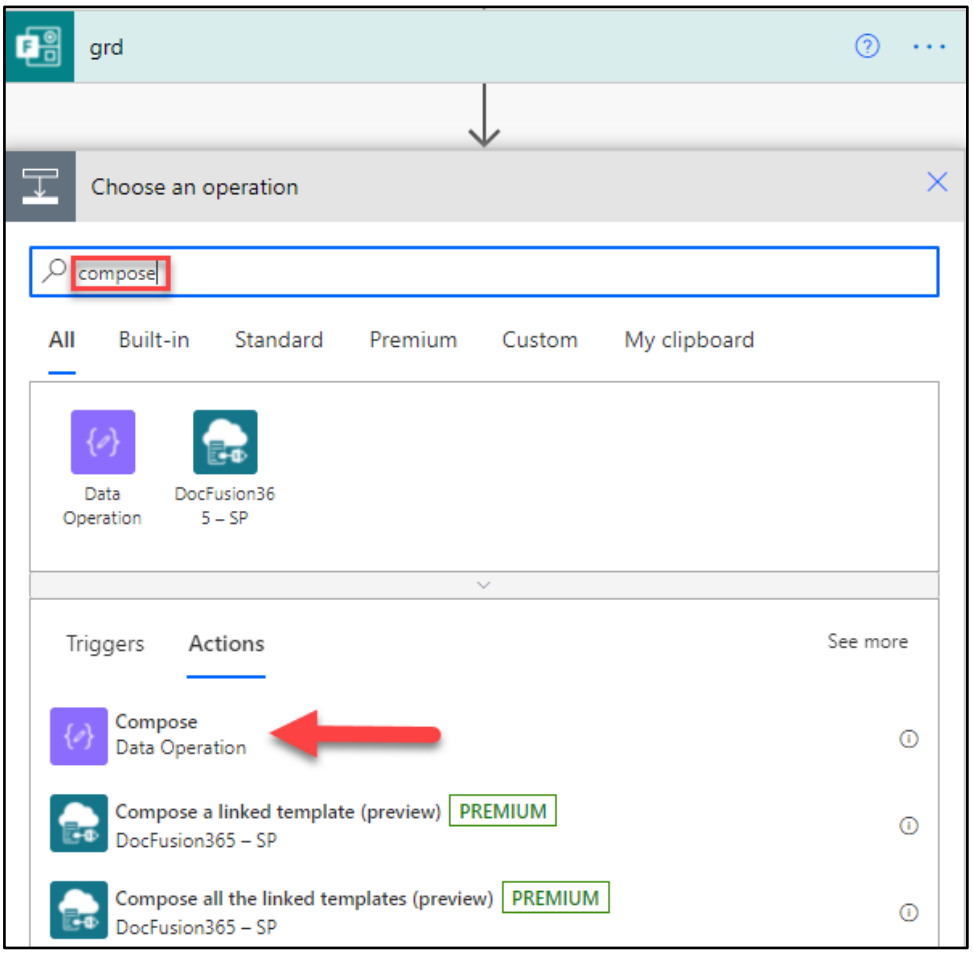

Click on **+ Next step** button at the bottom.

Search for **compose**

Copyright © 2021. All rights reserved

Step 4 : Compose Sugar field into a Numeric Field.

Click on **Compose - Data Operation** in the list that is displayed

Rename to **c-s1**,

Select the **ellipsis (...)** for **Compose**

Select **Rename**

Type **c-s1**

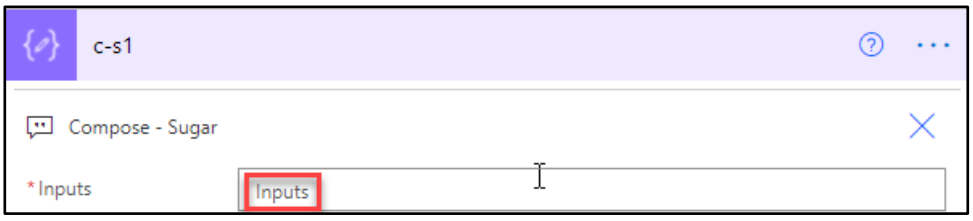

Add **Compose - Sugar** as a comment,

Select the **ellipsis (...)** for **c-s1**

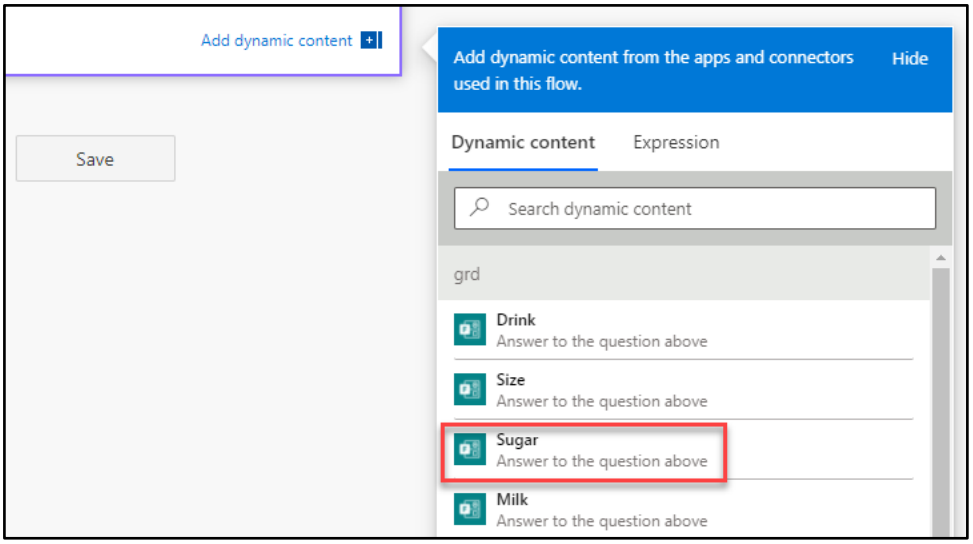

Select **Add a comment**

Type **Compose - Sugar**

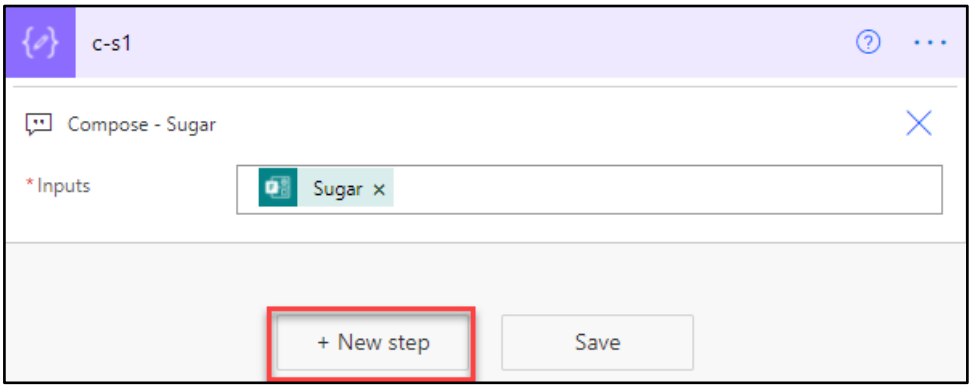

Copyright © 2021. All rights reserved

Click in **Inputs** field

Select **Sugar** from the list of dynamic content that appears on the right

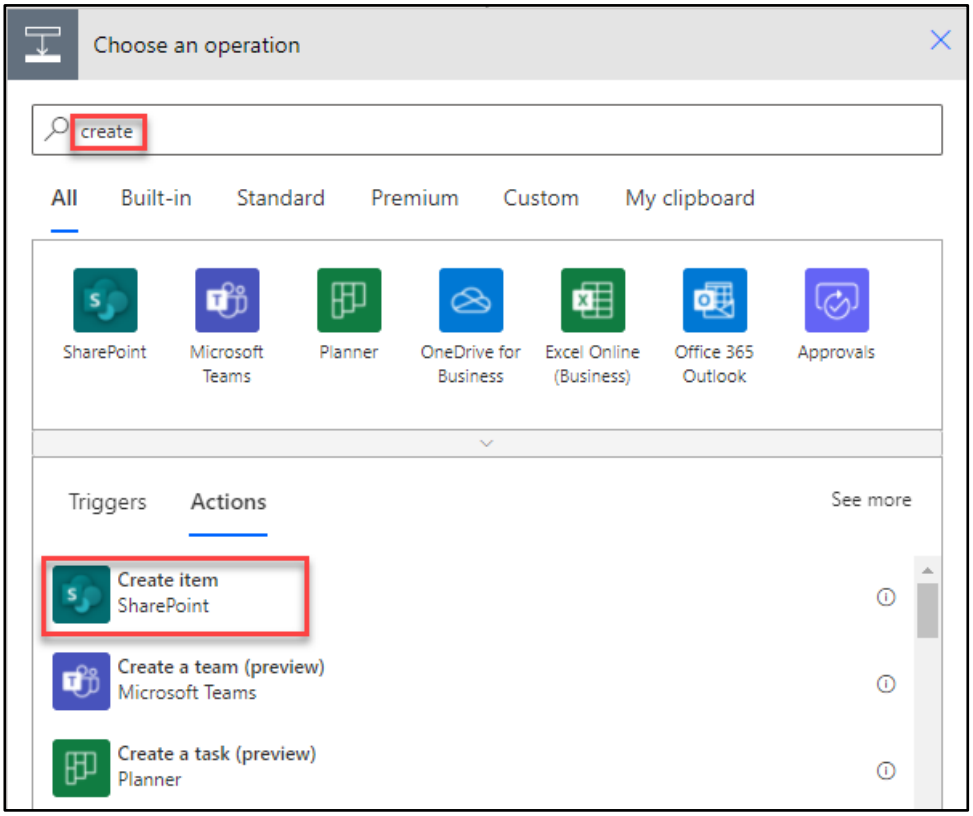

Click on **+ New step** at the bottom.

Search for **create**

Note: As the flow grows the options within **Dynamic Content** increases. Always try and choose the option that is higher up the list.

Copyright © 2021. All rights reserved

Step 5 : Add Order Details to OrderDetails SharePoint List

Click on **Create item - SharePoint**

Rename to **ci-od**,

Select the **ellipsis (...)** for **Create item**

Select **Rename**

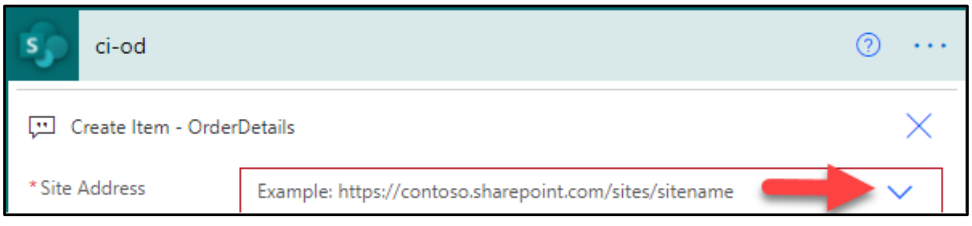

Type **ci-od**

Add **Create item - OrderDetails** as a comment,

Select the **ellipsis (...)** for **ci-od**

Select **Add a comment**

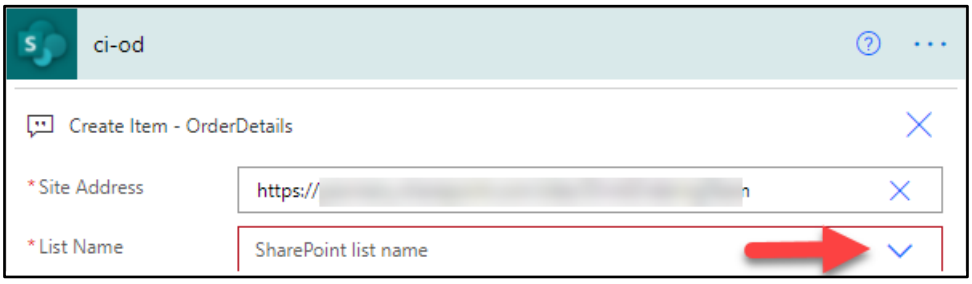

Type **Create item - OrderDetails**

Click on the drop down arrow for **Site Address**

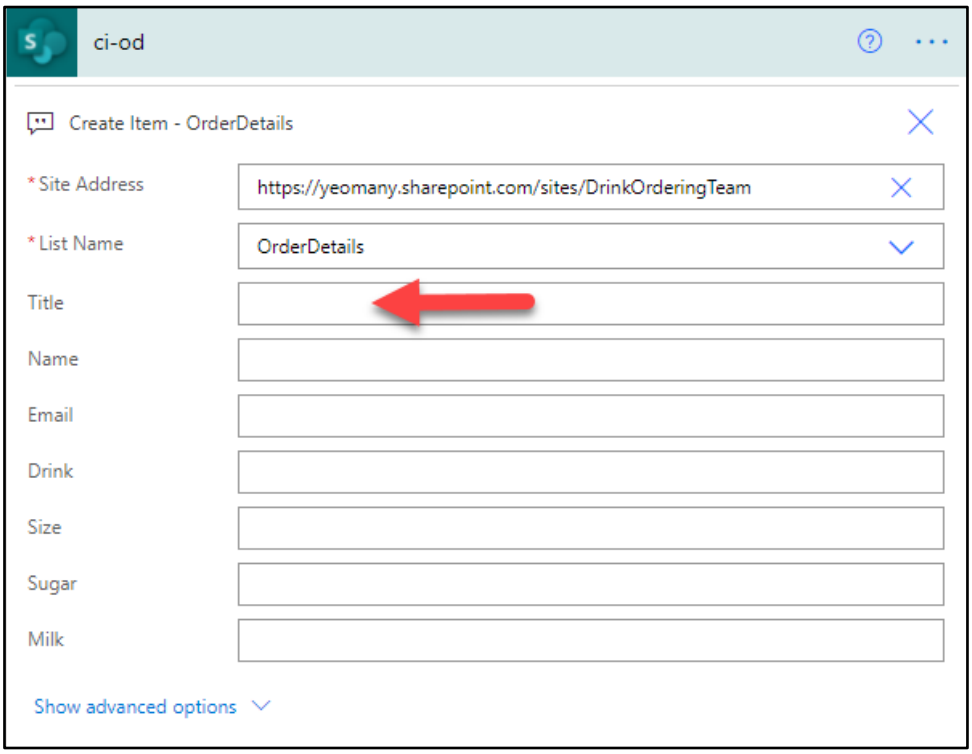

Copyright © 2021. All rights reserved

Select the site where the SharePoint lists were previously created

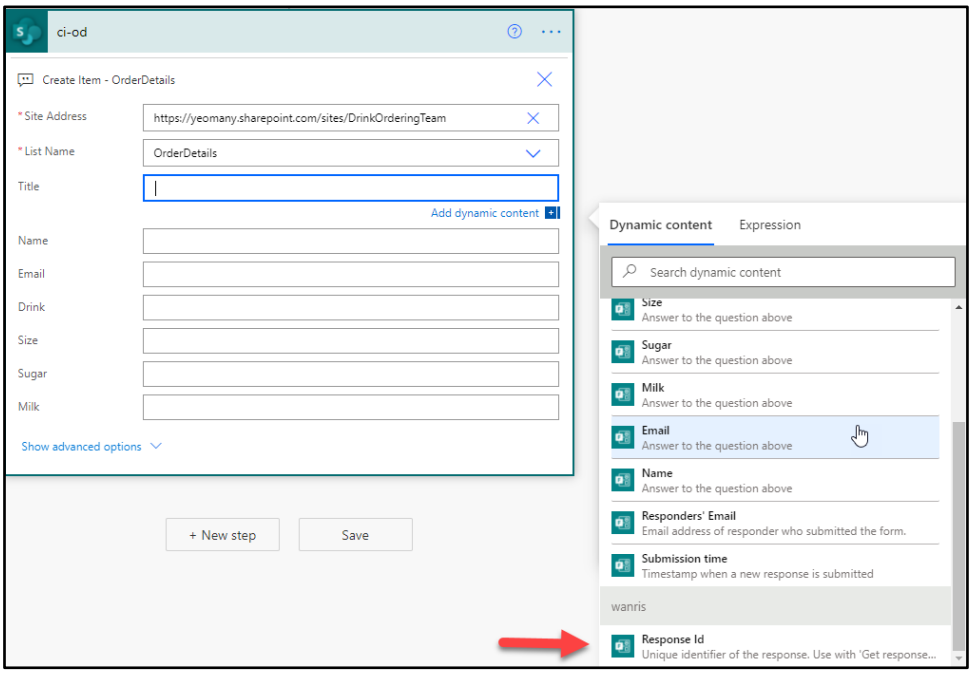

Click on the drop down arrow for **List Name** to display all the available lists in that site.

Select the **OrderDetails** list

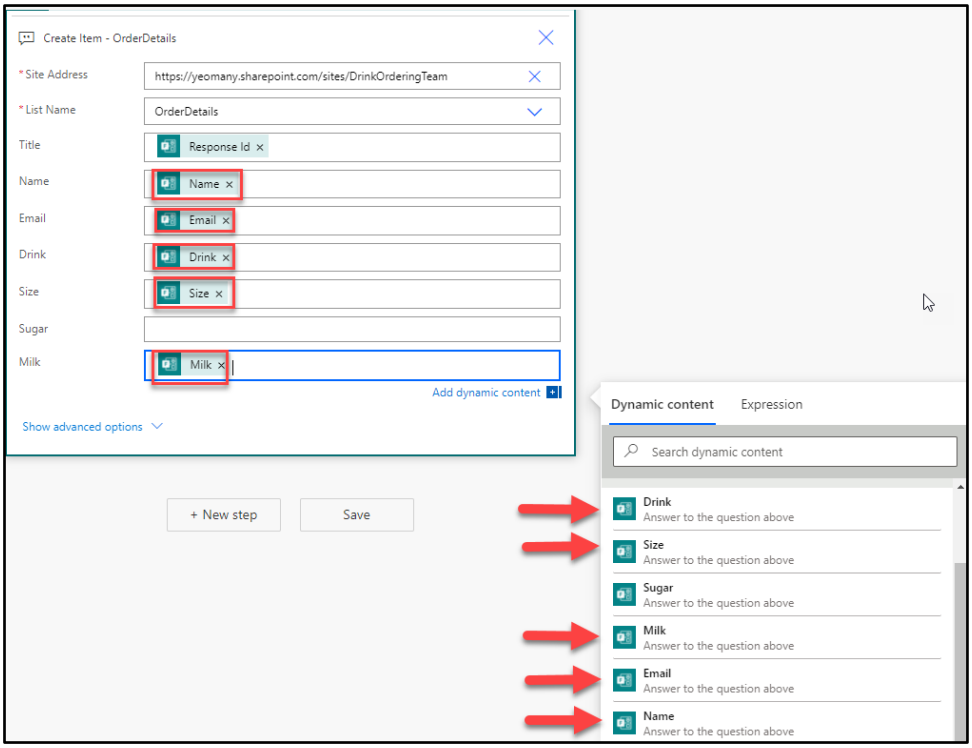

Click in the box for **Title**

Copyright © 2021. All rights reserved

Scroll down the Dynamic content list and select **Response Id**

Repeat mapping for

Name

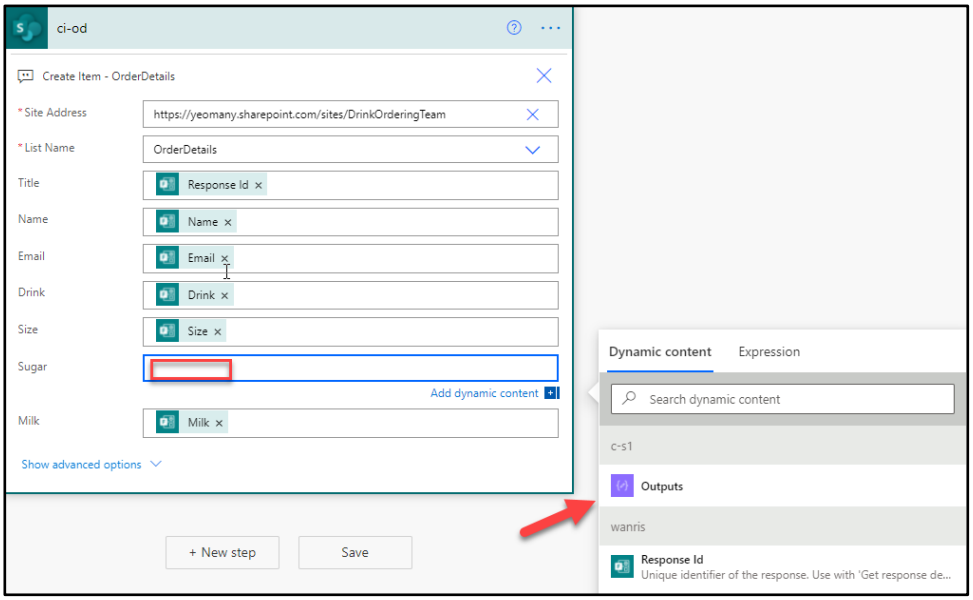

Drink

Size

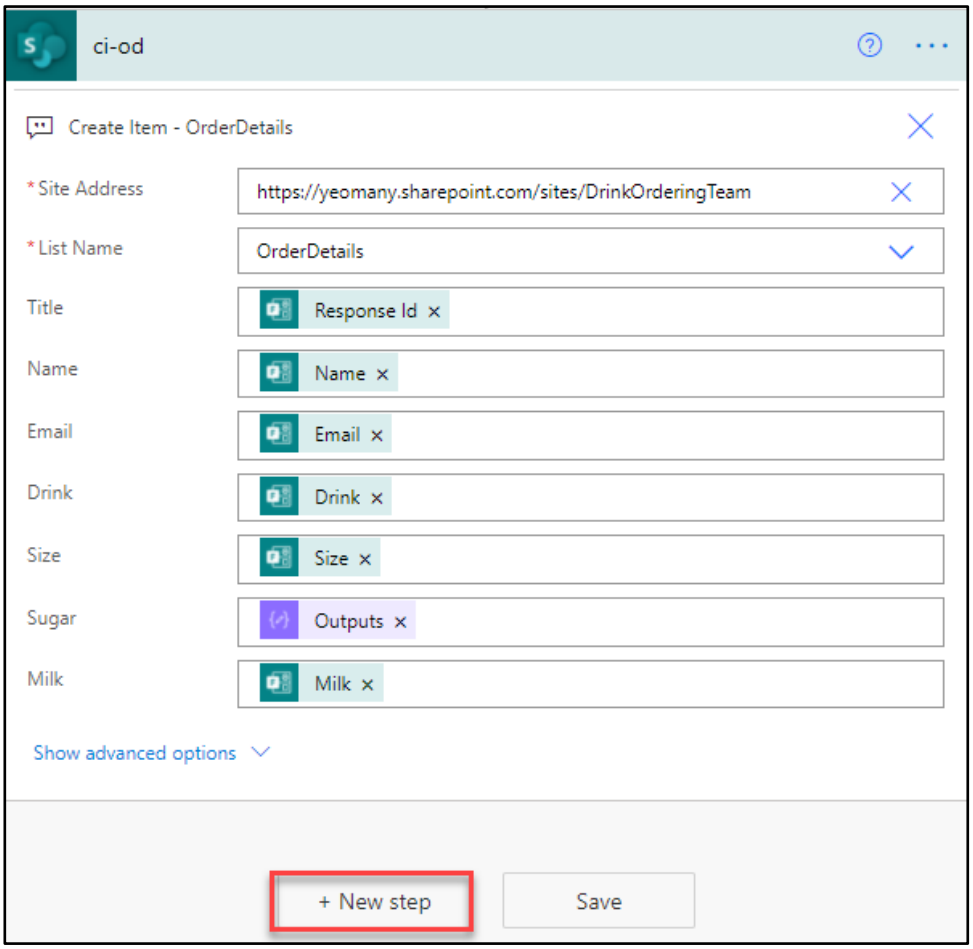

Milk

Copyright © 2021. All rights reserved

Email

Click on field for **Sugar** and select **Outputs** under **c-s1** heading

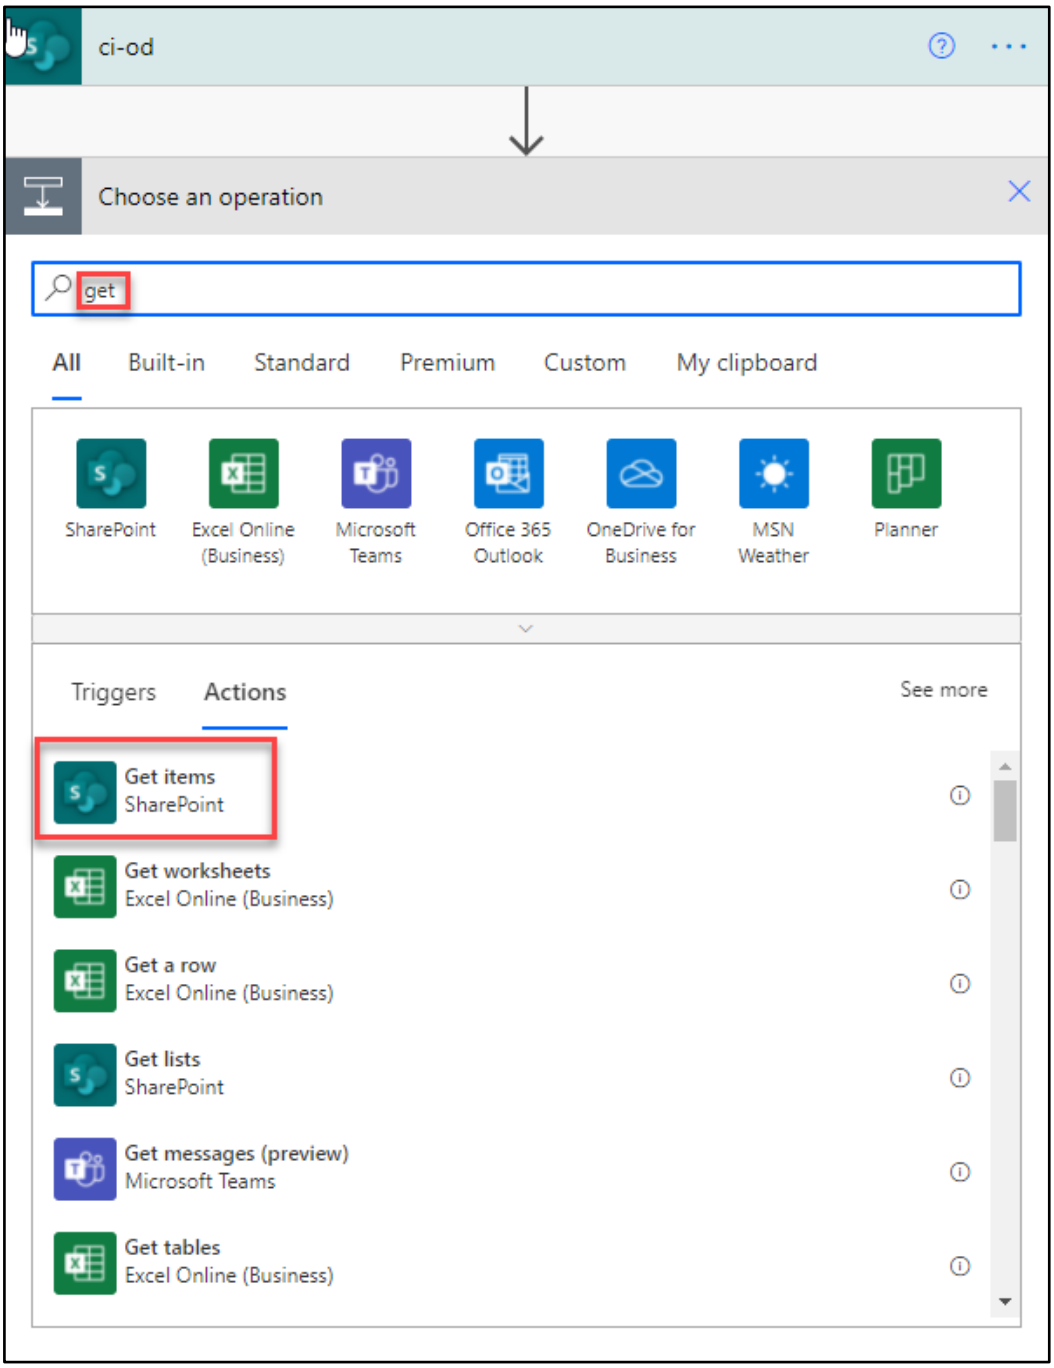

Click on **+ New step**

Search for **get**

Copyright © 2021. All rights reserved

Step 6 : Get FormResponse Setting From the OrderSettings List.

Click on **Get items - SharePoint**

Rename to **gi-os**,

Select the **ellipsis (...)** for Get items

Select **Rename**

Type **gi-os**

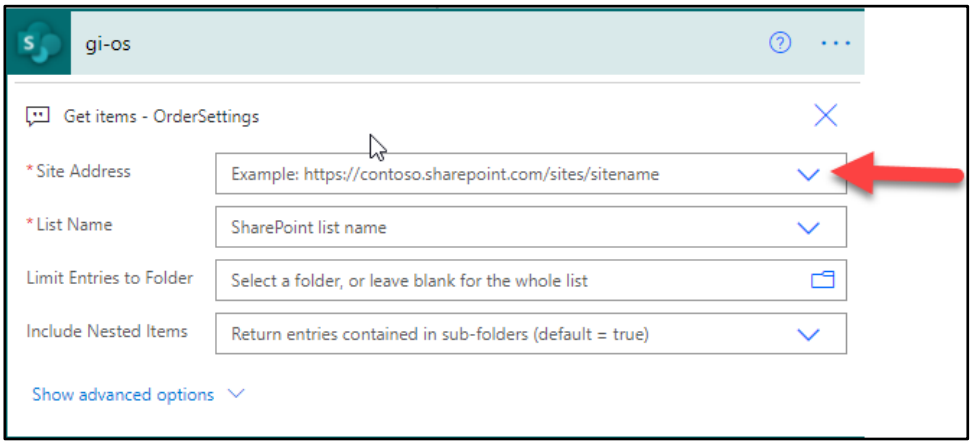

Copyright © 2021. All rights reserved

Add **Get items - OrderSettings** as a comment,

Select the **ellipsis (...)** for **gi-os**

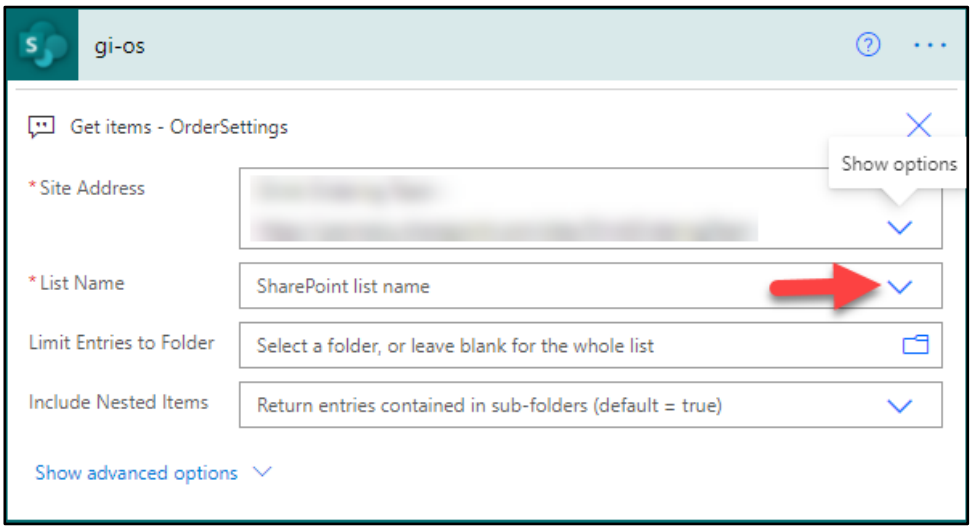

Select **Add a comment**

Type **Get items – OrderSettings**

Click on the drop down arrow for **Site Address** field

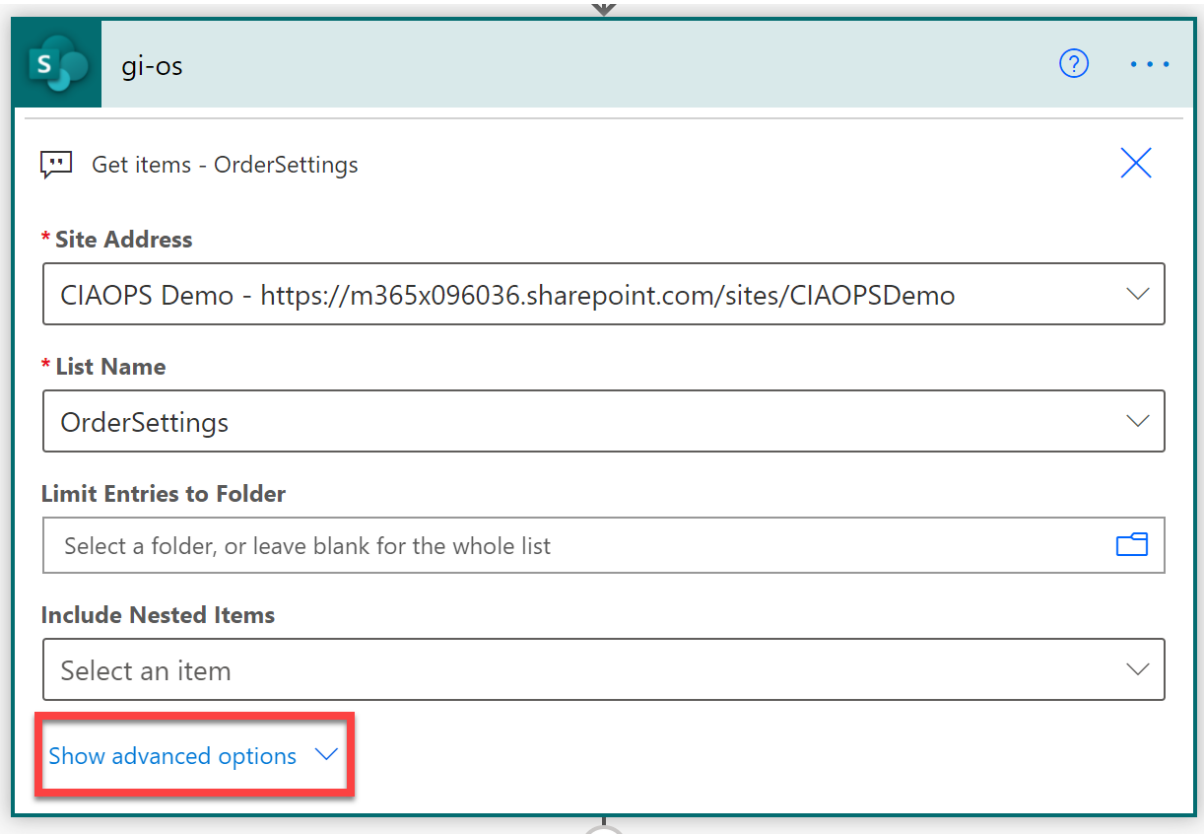

Select the site where the SharePoint lists were created

Click on the drop down arrow for **List Name** to display all the lists in that site.

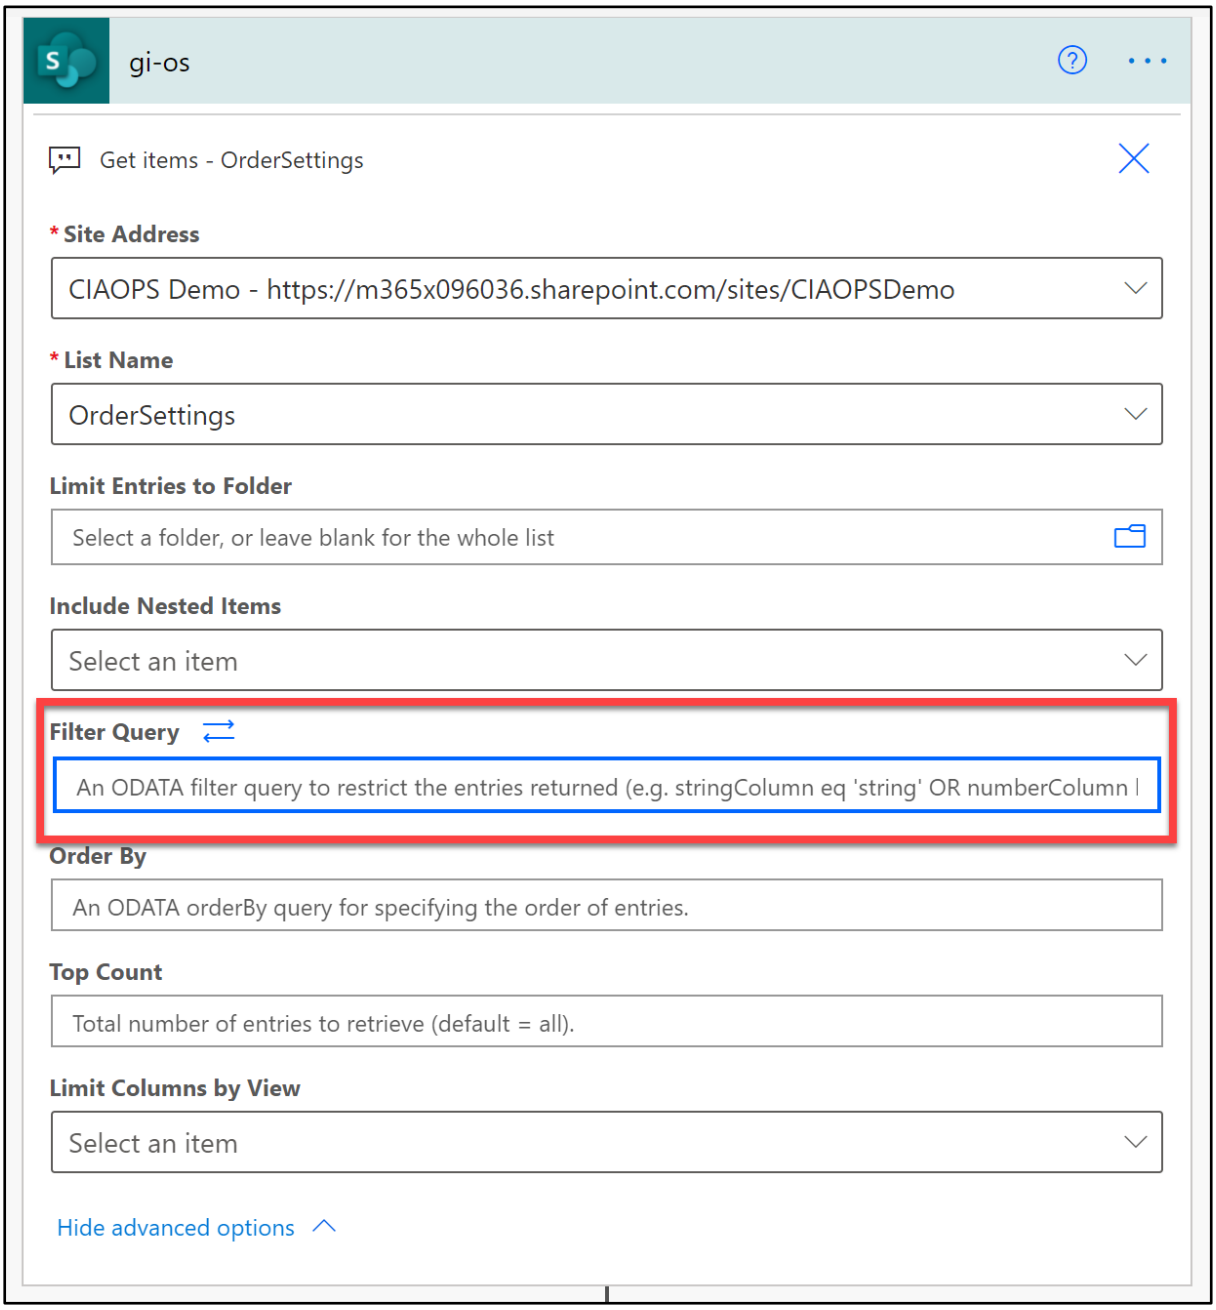

Select **OrderSettings**

Copyright © 2021. All rights reserved

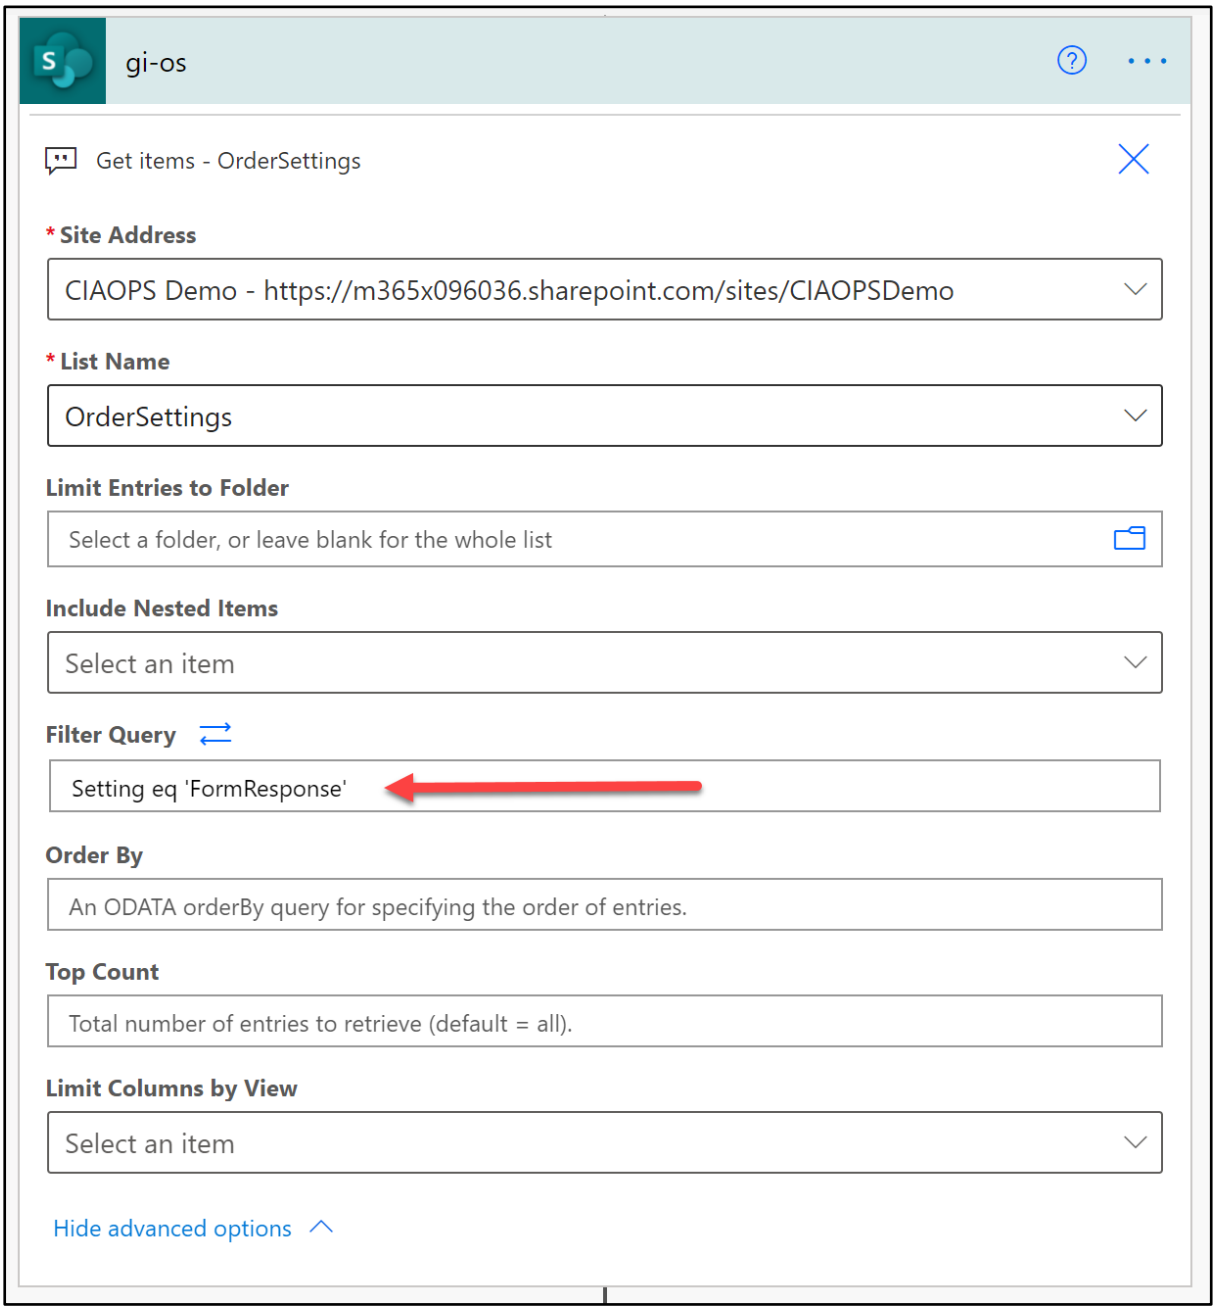

Click on the drop down arrow for **Show advanced options**

Copyright © 2021. All rights reserved

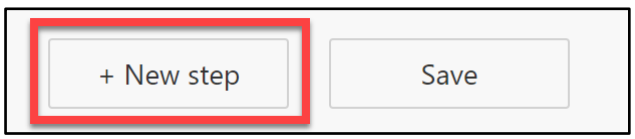

Click in the **Filter Query** field and type **Setting eq 'FormResponse'**

Copyright © 2021. All rights reserved

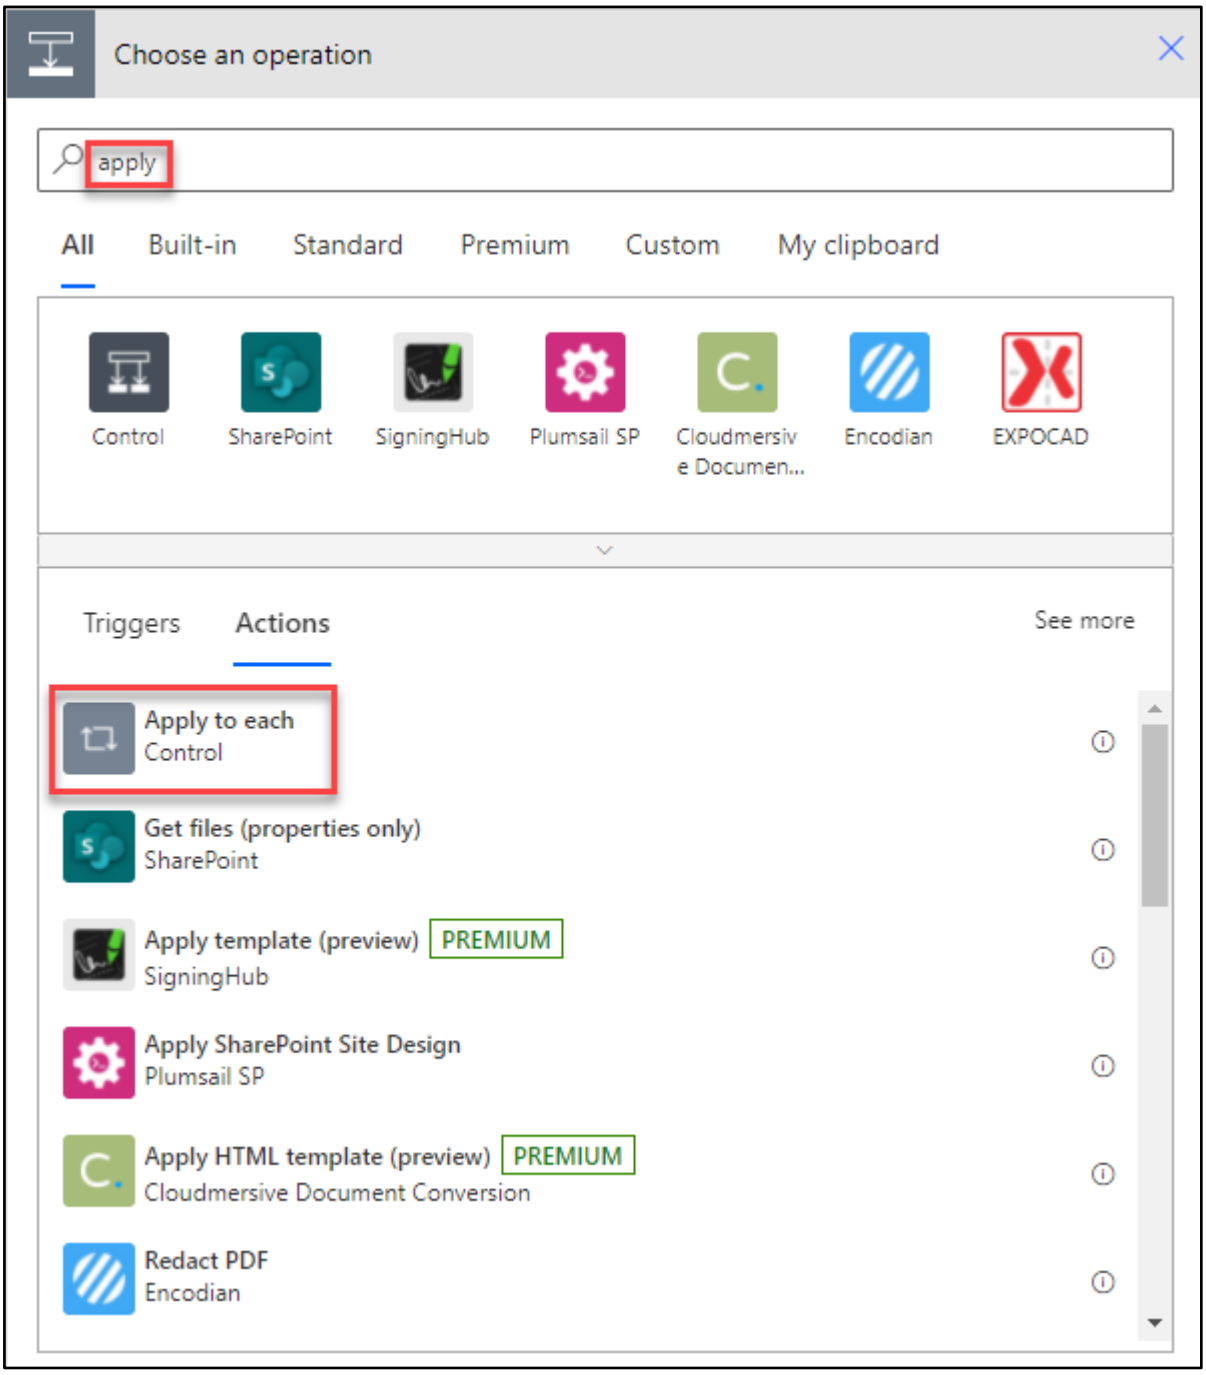

Click on **+ New step** at the bottom

Search for the **apply** action

Copyright © 2021. All rights reserved

Step 7 : Create Potential Loop for OrderSettings Records.

Select **Apply to each - Control**

Rename to **ate-os**,

Select the **ellipsis (...)** for Apply to each

Select **Rename**

Type **ate-os**

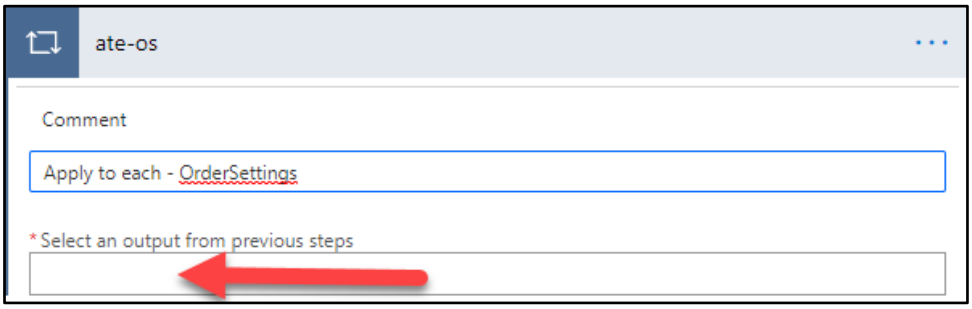

Copyright © 2021. All rights reserved

Add **Apply to each - OrderSettings** as a comment,

Select the **ellipsis (...)** for **ate-os**

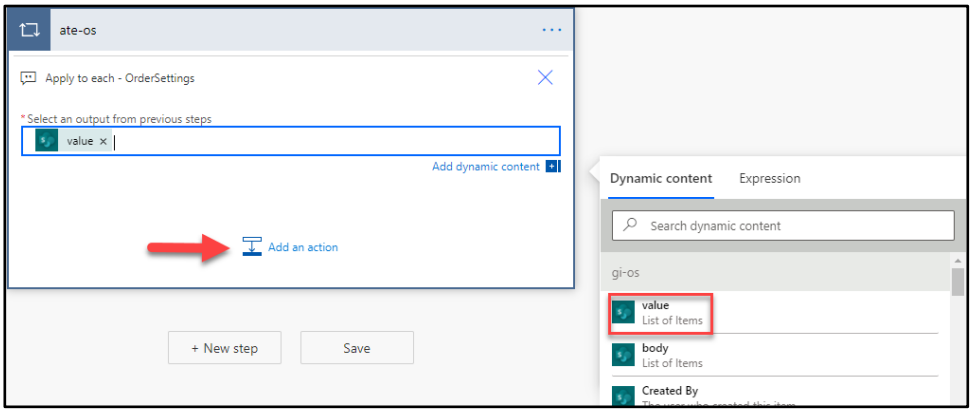

Select **Add a comment**

Type **Apply to each – OrderSettings**

Click in the field **Select an output from previous steps**

Select **value** under **gi-os** in the Dynamic content list on the right

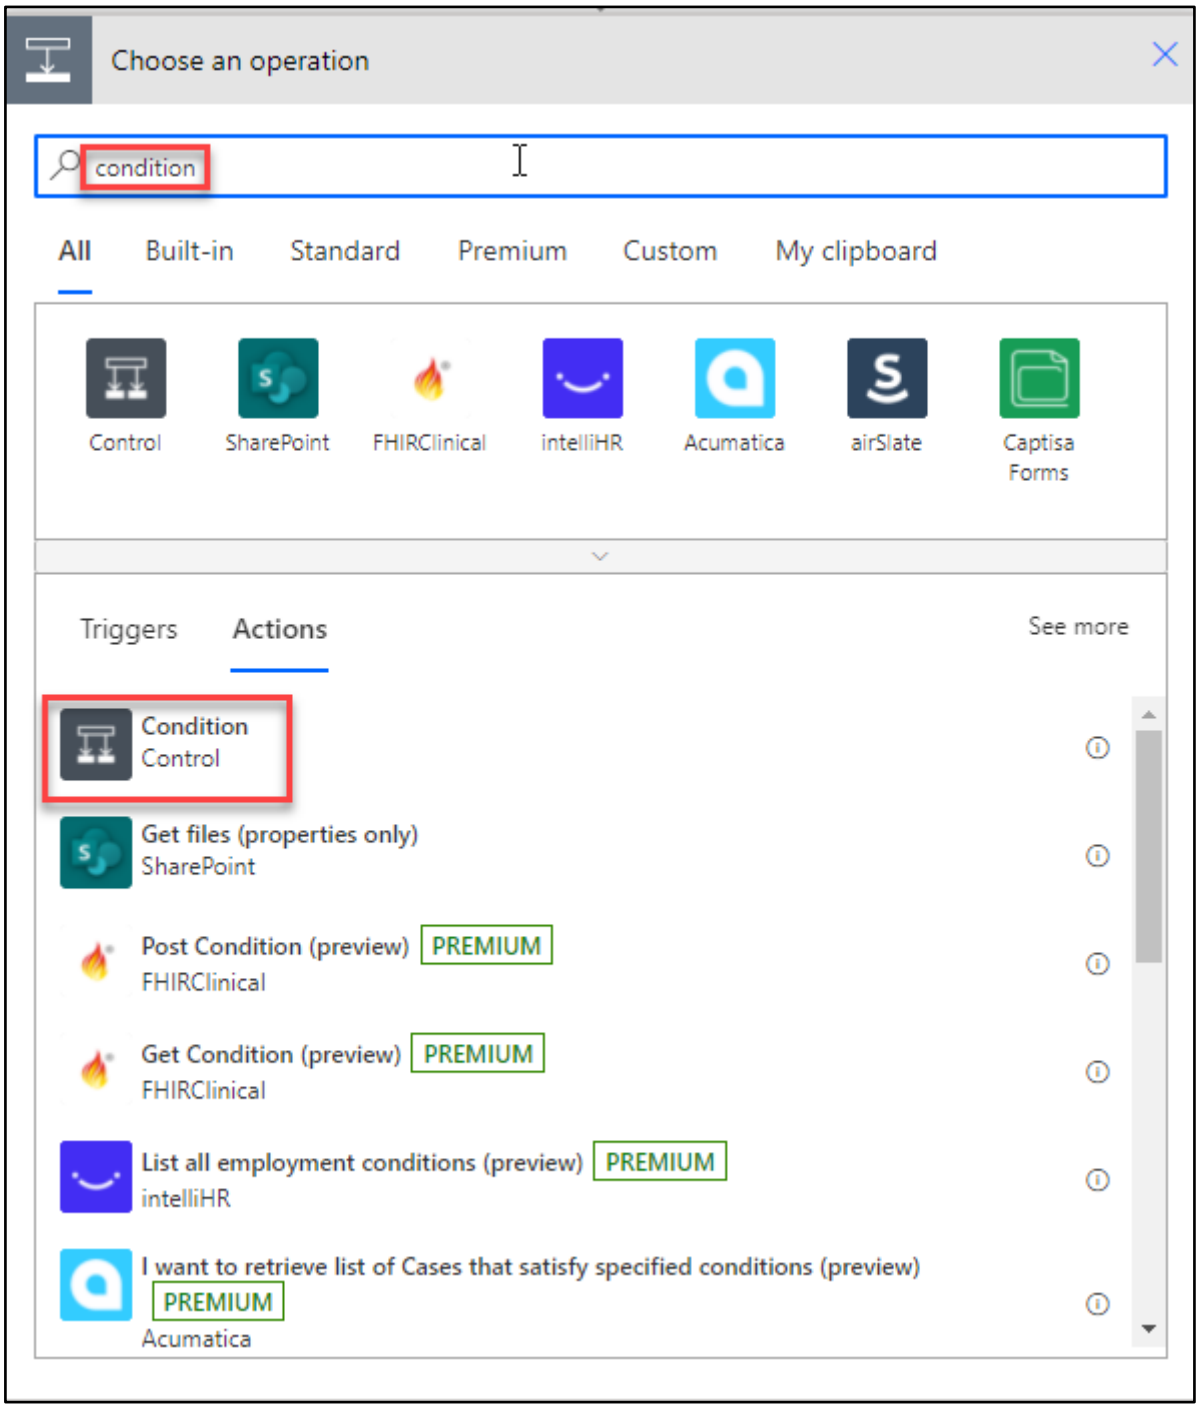

Click on **Add an action** inside that action

Search for **condition**

Copyright © 2021. All rights reserved

Step 8 : Create Test of FormResponse Setting.

Select **Condition - Control**

Rename to **c-s2**,

Select the **ellipsis (...)** for **Condition**

Select **Rename**

Type **c-s2**

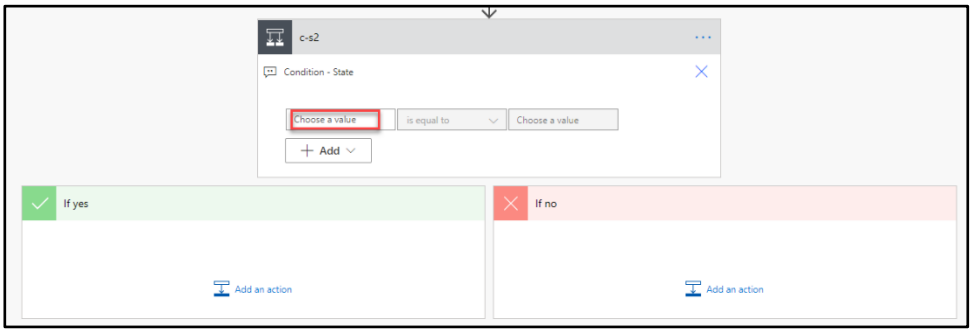

Copyright © 2021. All rights reserved

Add **Condition - State** as a comment,

Select the **ellipsis (...)** for **c-s2**

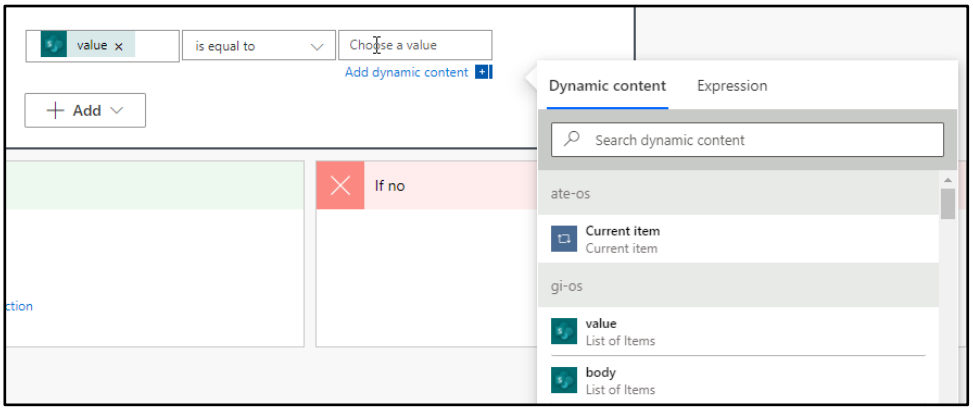

Select **Add a comment**

Type **Condition – State**

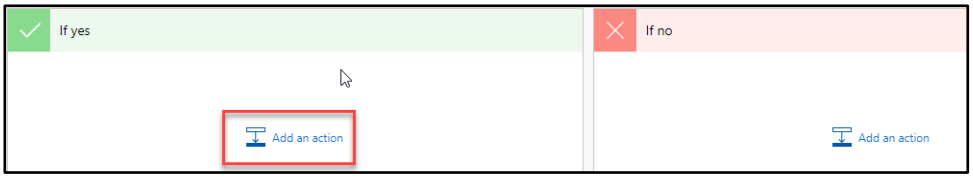

Click in **Choose a value** field

Scroll and select **Value** under **gi-os** in the Dynamic content list

Click in the second **Choose a value** field and type **Yes**

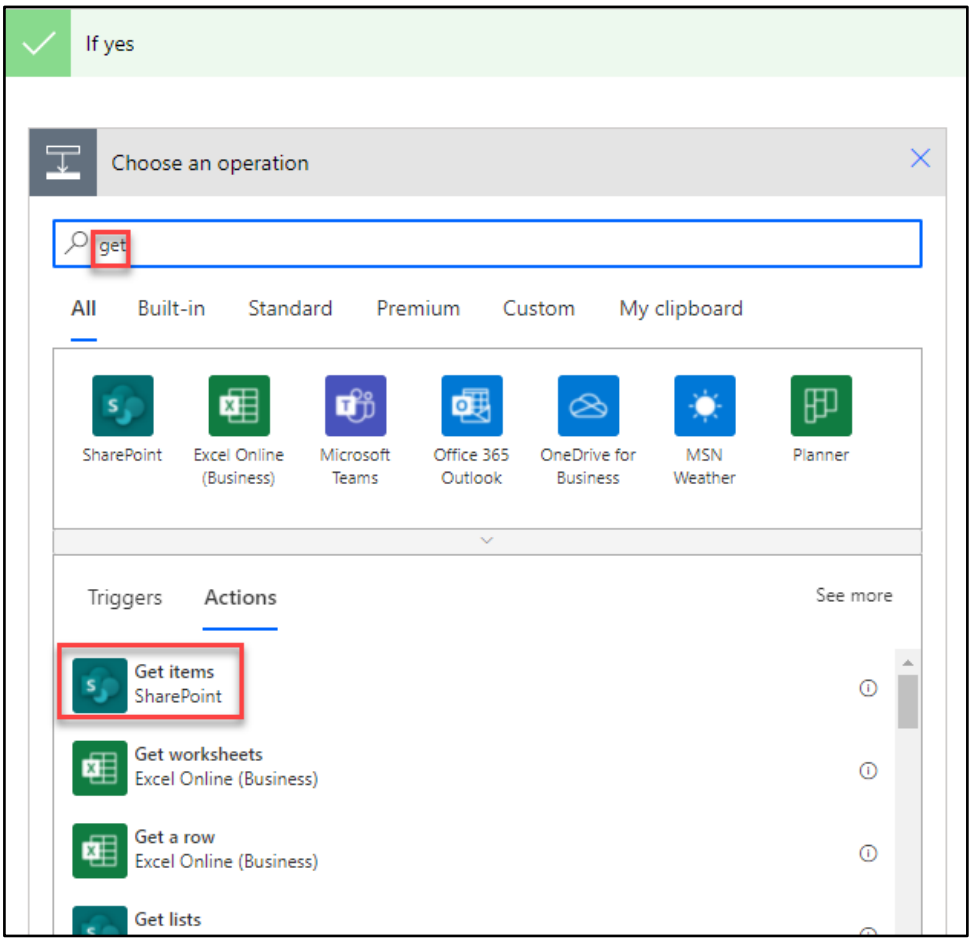

Click on **Add an action** inside the If yes box

Search for **get**

Copyright © 2021. All rights reserved

Step 9 : Get drink details back from SharePoint List.

Select **Get items - SharePoint**

Rename to **gi-od**,

Select the **ellipsis (...)** for **Get items**

Select **Rename**

Type **gi-od**

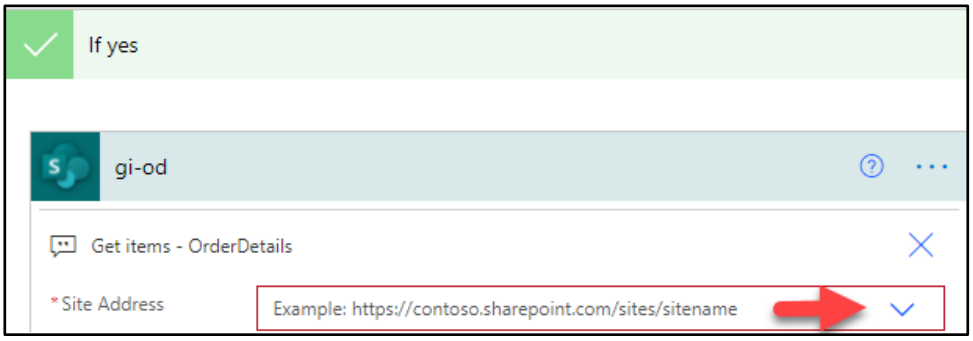

Add **Get items - OrderDetails** as a comment,

Select the **ellipsis (...)** for **gi-od**

Select **Add a comment**

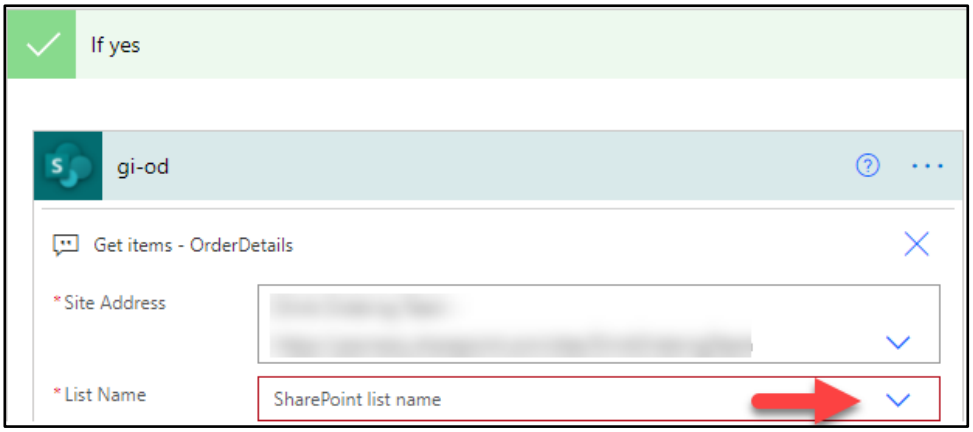

Type **Get items – OrderDetails**

Copyright © 2021. All rights reserved

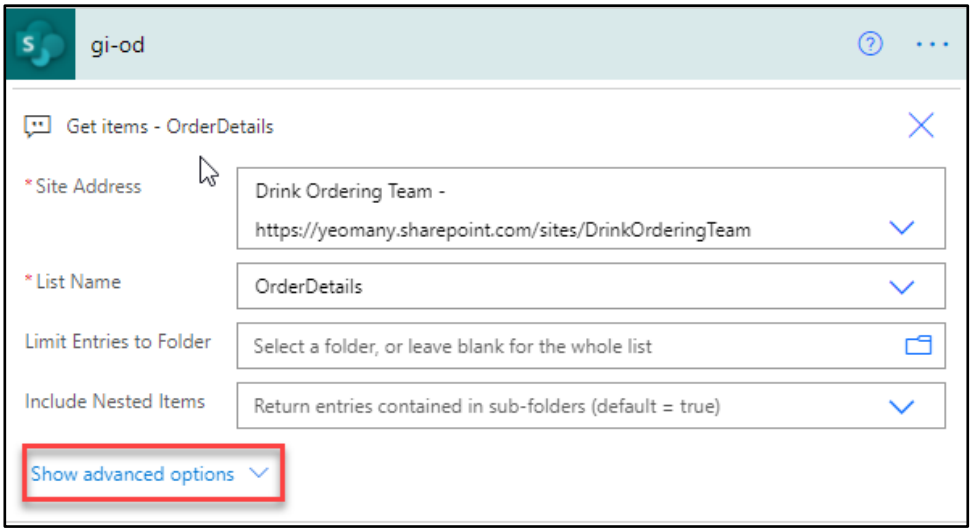

Click on the drop down arrow for **Site Address**

Select the site where the SharePoint lists were created

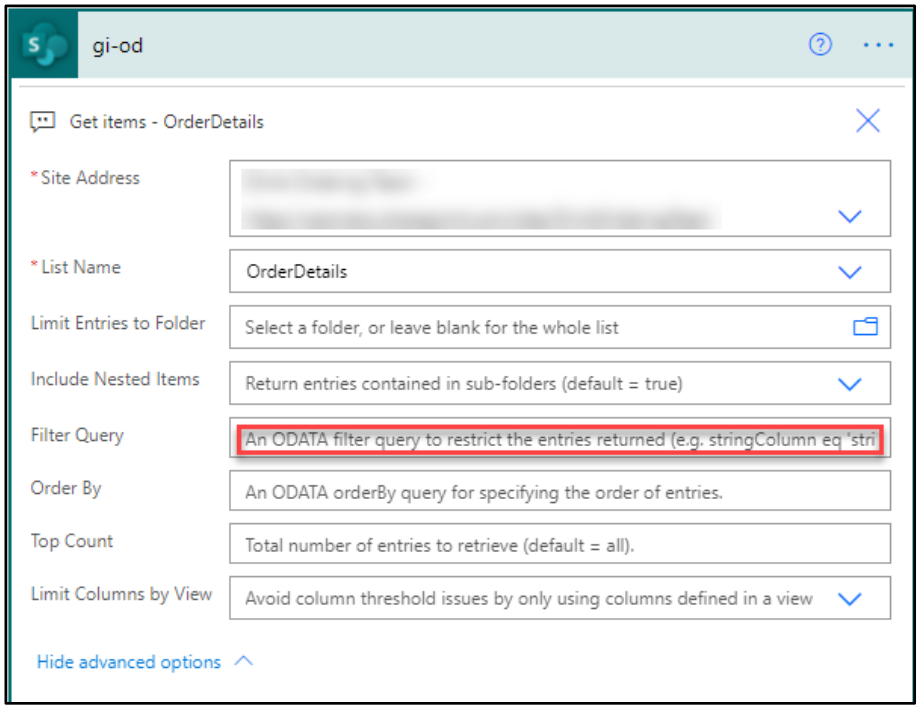

Click on the drop down arrow for **List Name** to display all the list in the site.

Select **OrderDetails**

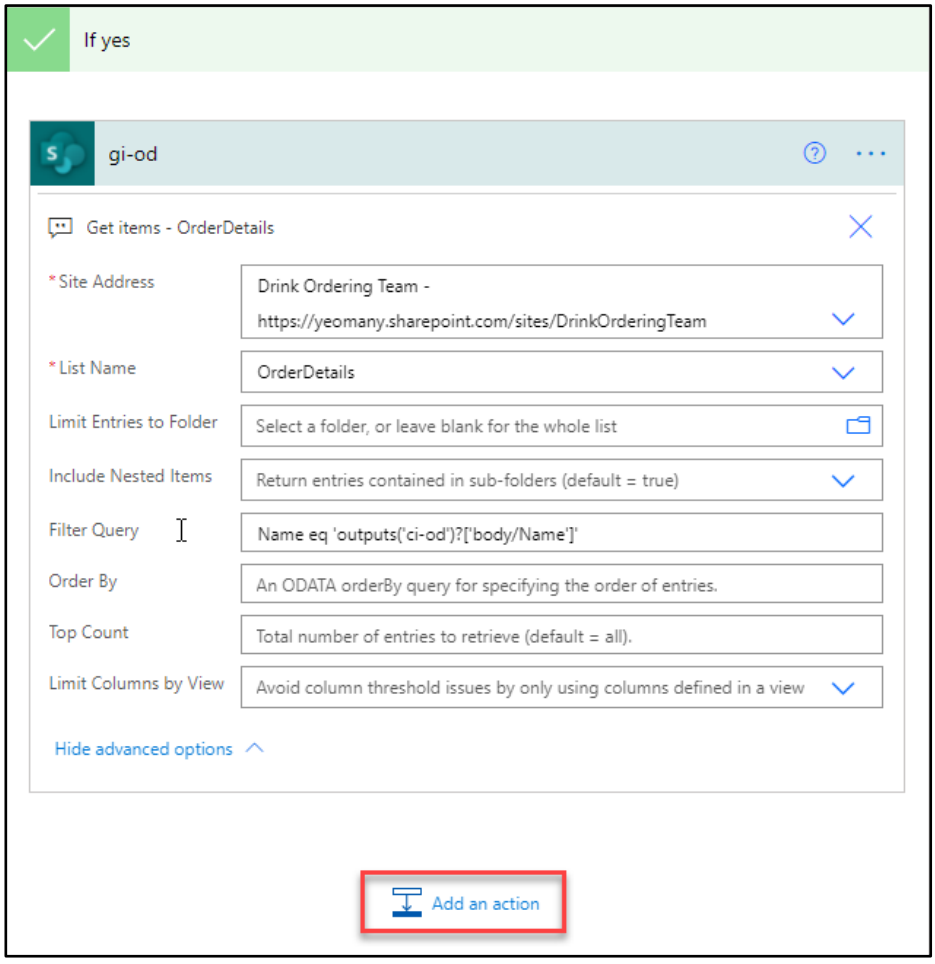

Click on **Show advanced options**

Copyright © 2021. All rights reserved

Type in **Name eq 'outputs('ci-od')?['body/Name']'** into the **Filter Query** field.

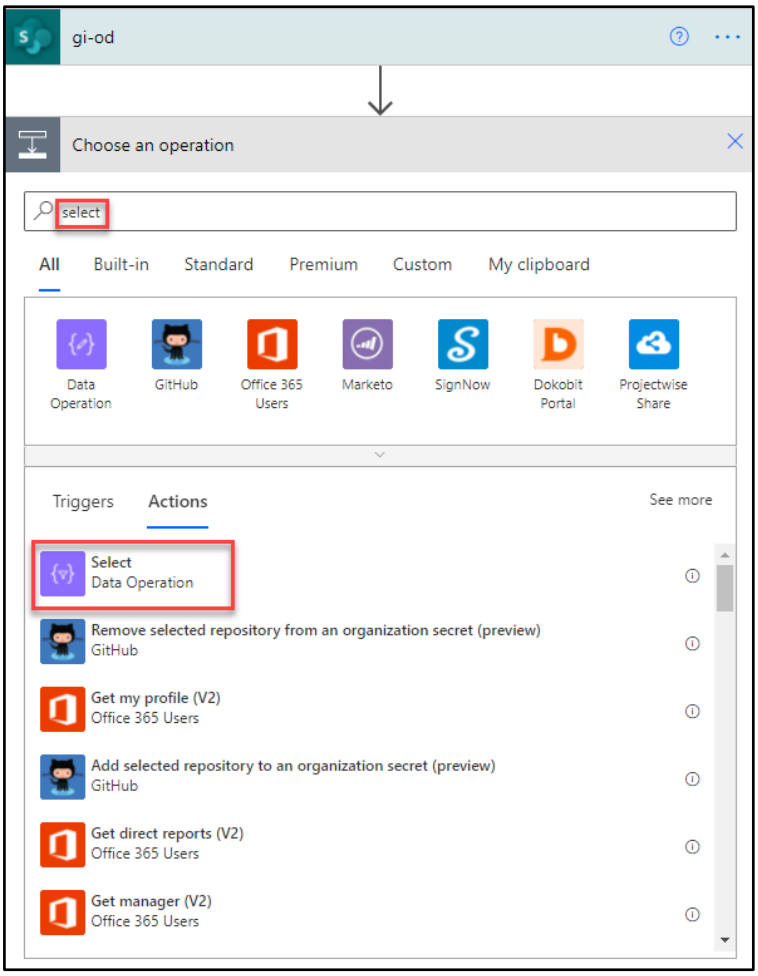

Click on **Add an action** inside the **If yes** box

Copyright © 2021. All rights reserved

Search for **select**

Step 10 : Create array using the display data.

Select **Select - Data Operation**

Rename to **s-od**,

Select the **ellipsis (...)** for **Select**

Select **Rename**

Type **s-od**

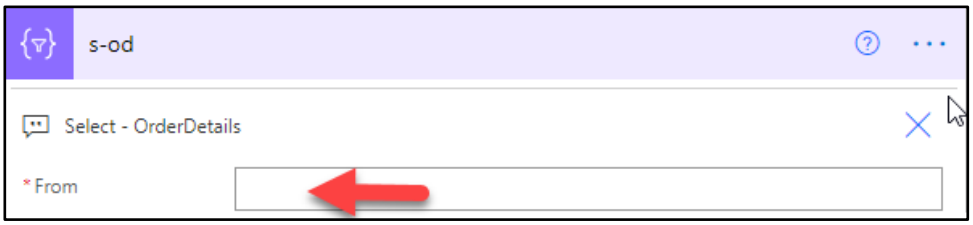

Add **Select - OrderDetails** as a comment,

Select the **ellipsis (...)** for **s-od**

Select **Add a comment**

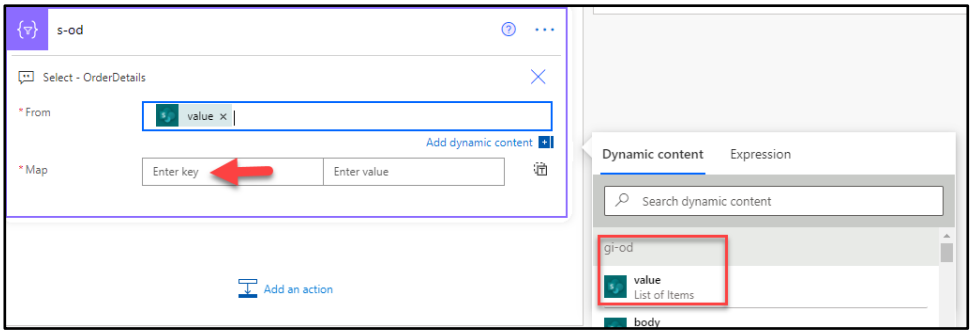

Type **Select – OrderDetails**

Copyright © 2021. All rights reserved

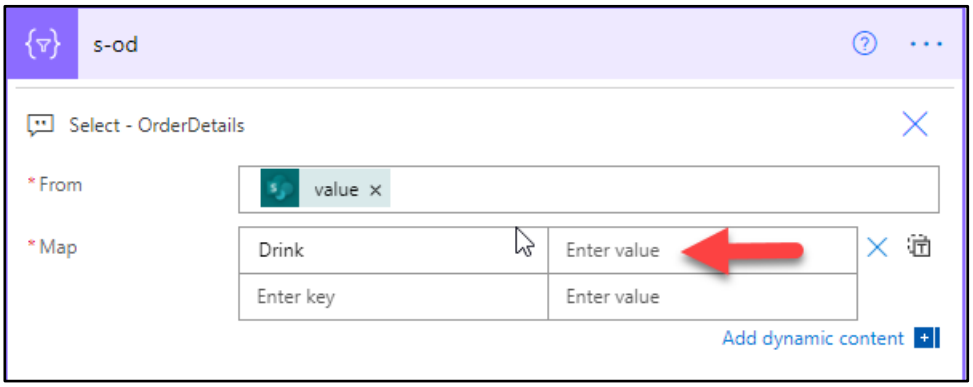

Click in the **From** field

Select **value** under **gi-od** from the Dynamic content list

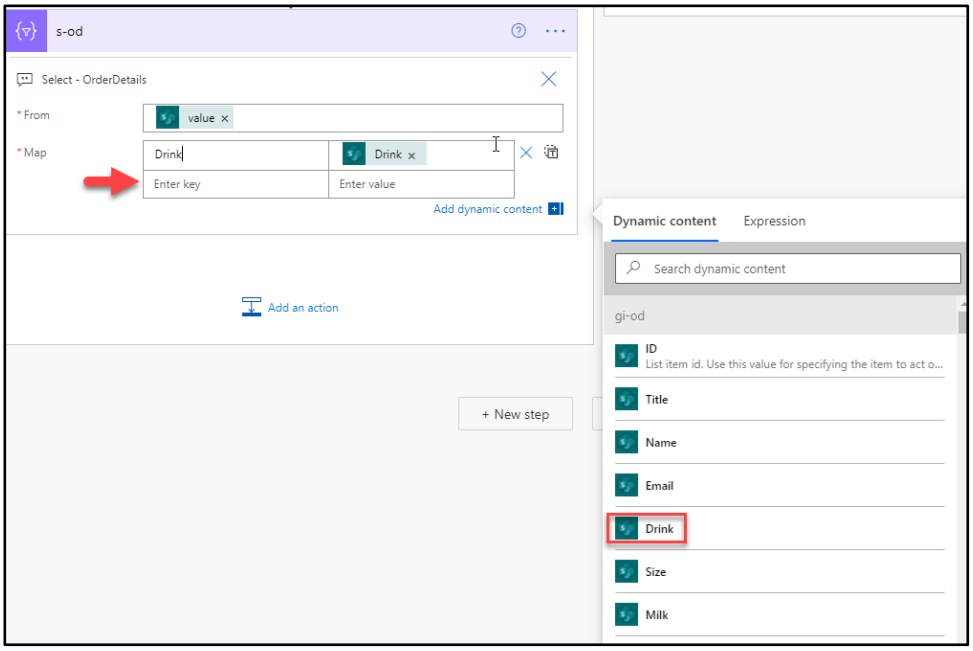

Click in the **Enter key** field and type **Drink**

Click in the first **Enter value** field

Scroll down and select **Drink** under **gi-od** from the Dynamic content list

Copyright © 2021. All rights reserved

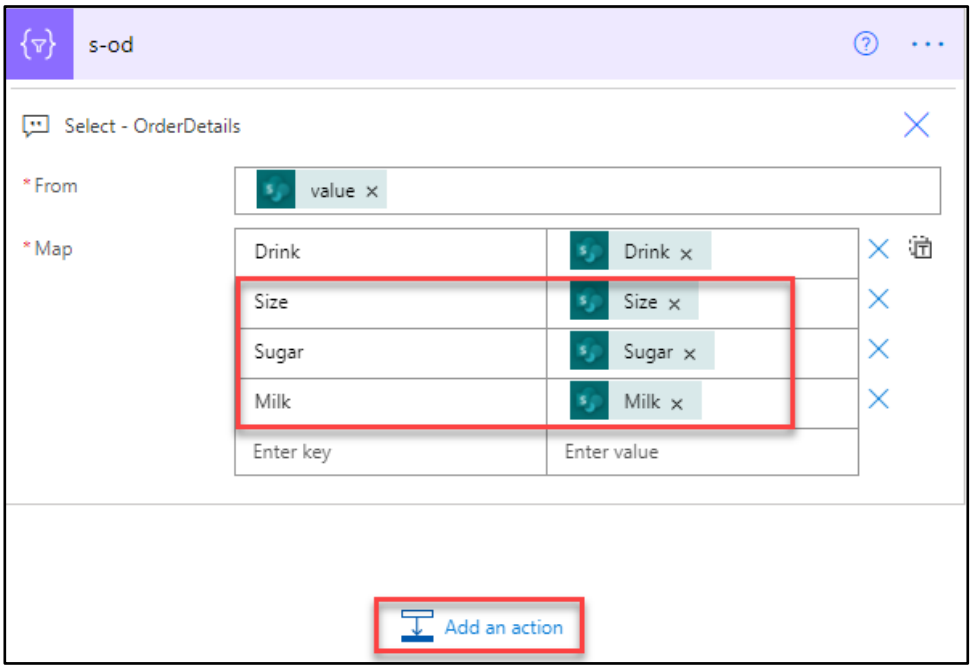

Repeat this process for

Size

Sugar

Milk

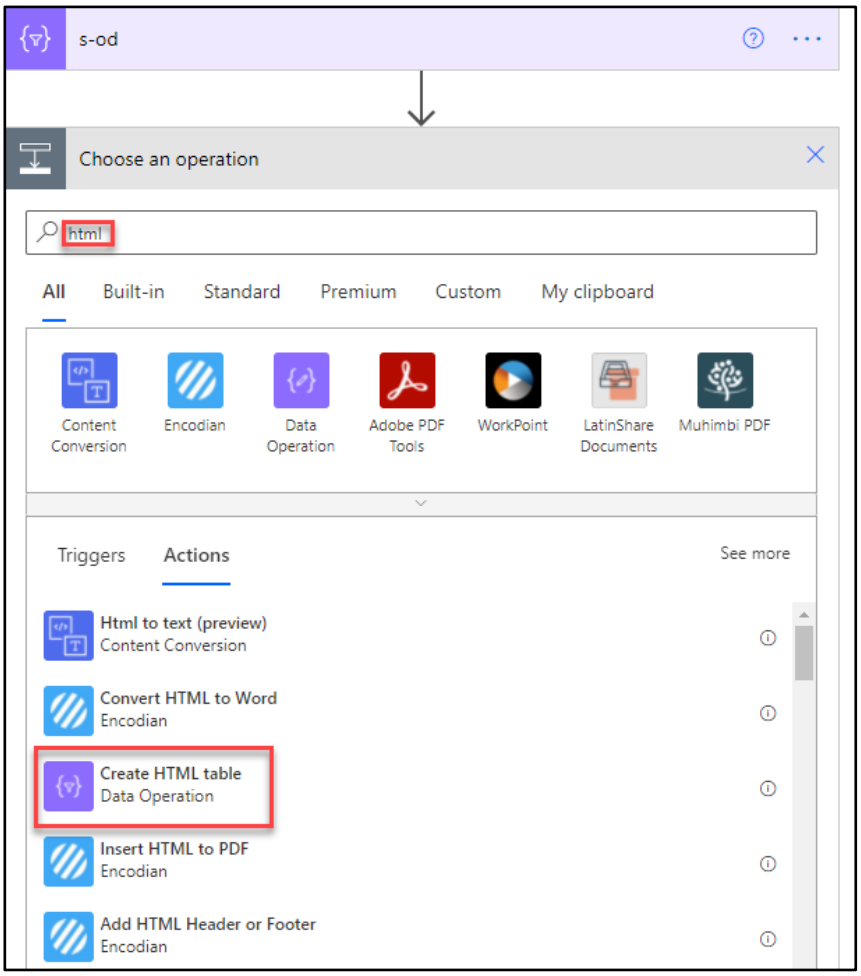

Click on **Add an action** inside the If yes box

Search for **html**

Copyright © 2021. All rights reserved

Step 11 : Create HTML Table

Select **Create HTML table - Data Operation**

Rename to **chtmlt**,

Select the **ellipsis (...)** for Create HTML table

Select **Rename**

Type **chtmlt**

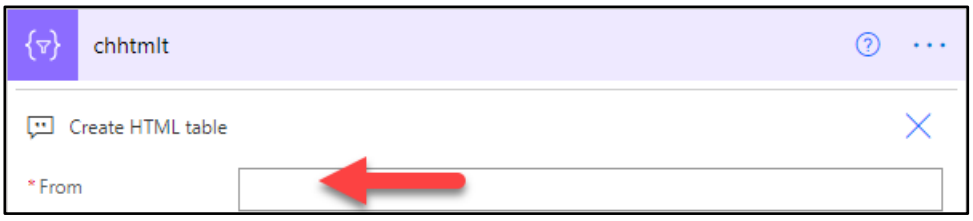

Add **Create HTML table** as a comment,

Select the **ellipsis (...)** for **chtmlt**

Select **Add a comment**

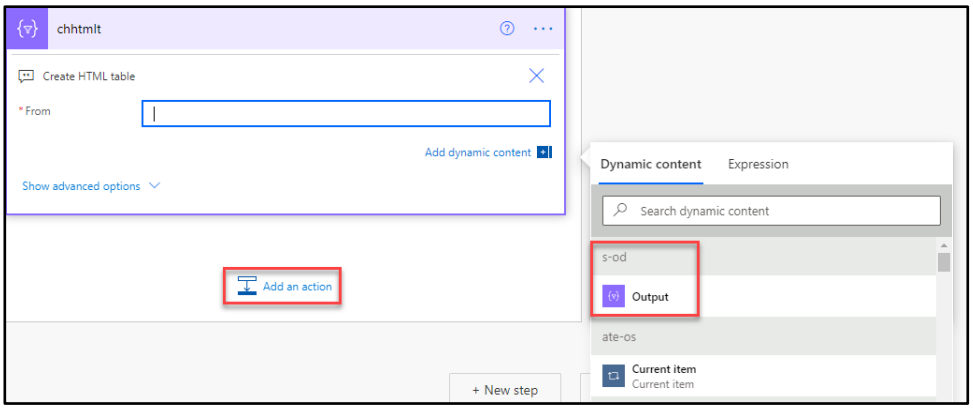

Type **Create HTML table**

Copyright © 2021. All rights reserved

Click in the **From** field

Select **Output** under **s-od** from the Dynamic content list

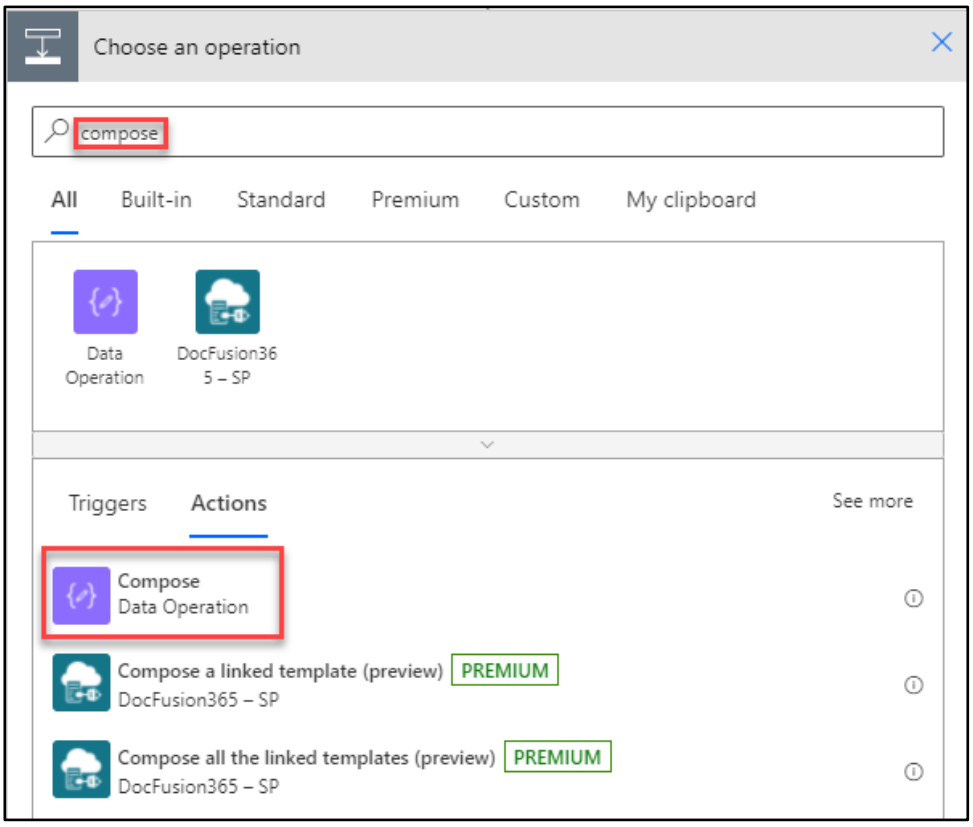

Click on **Add an action** inside the If yes box

Search for **compose**

Copyright © 2021. All rights reserved

Step 12 : Add a Border to the HTML Table

Select **Compose - Data Operation**

Rename to **chtmlb**,

Select the **ellipsis (...)** for **Compose**

Select **Rename**

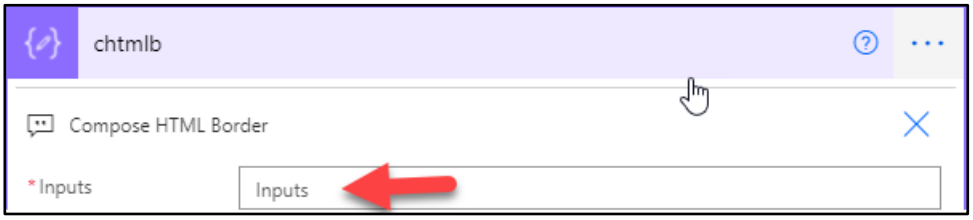

Type **chtmlb**

Add **Compose - HTML Border** as a comment,

Select the **ellipsis (...)** for **chtmlb**

Select **Add a comment**

Type **Compose HTML Border**

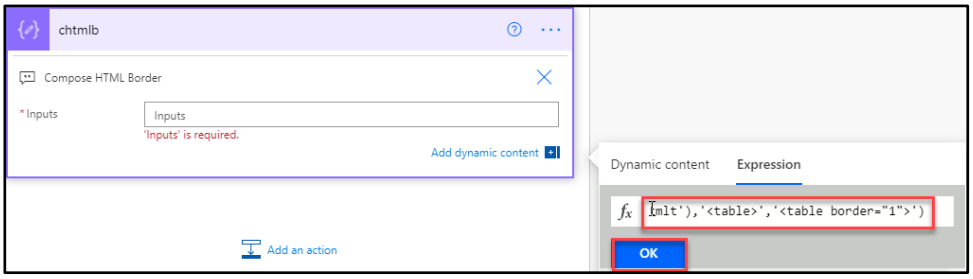

Click on the **Inputs** field

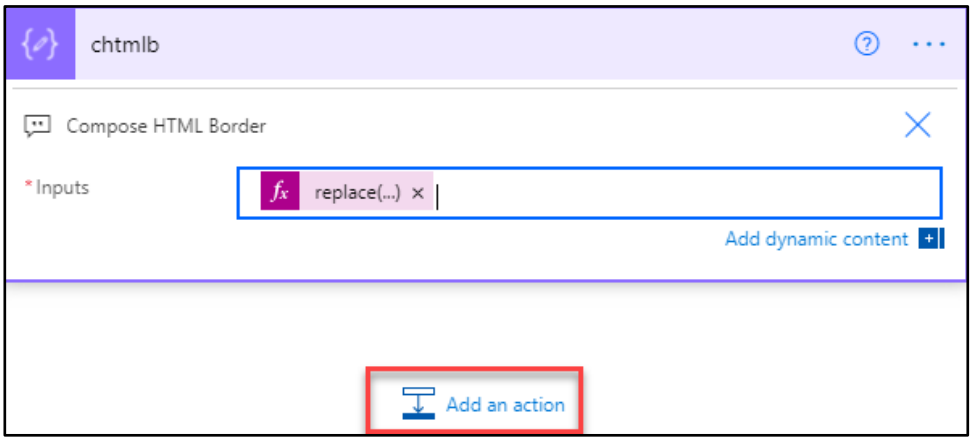

Copyright © 2021. All rights reserved

Click on **Expressions** instead of Dyanmic content here

Type in **replace(body('chtmlt'),'<table>','<table border="1">')**

Click on the **OK** button

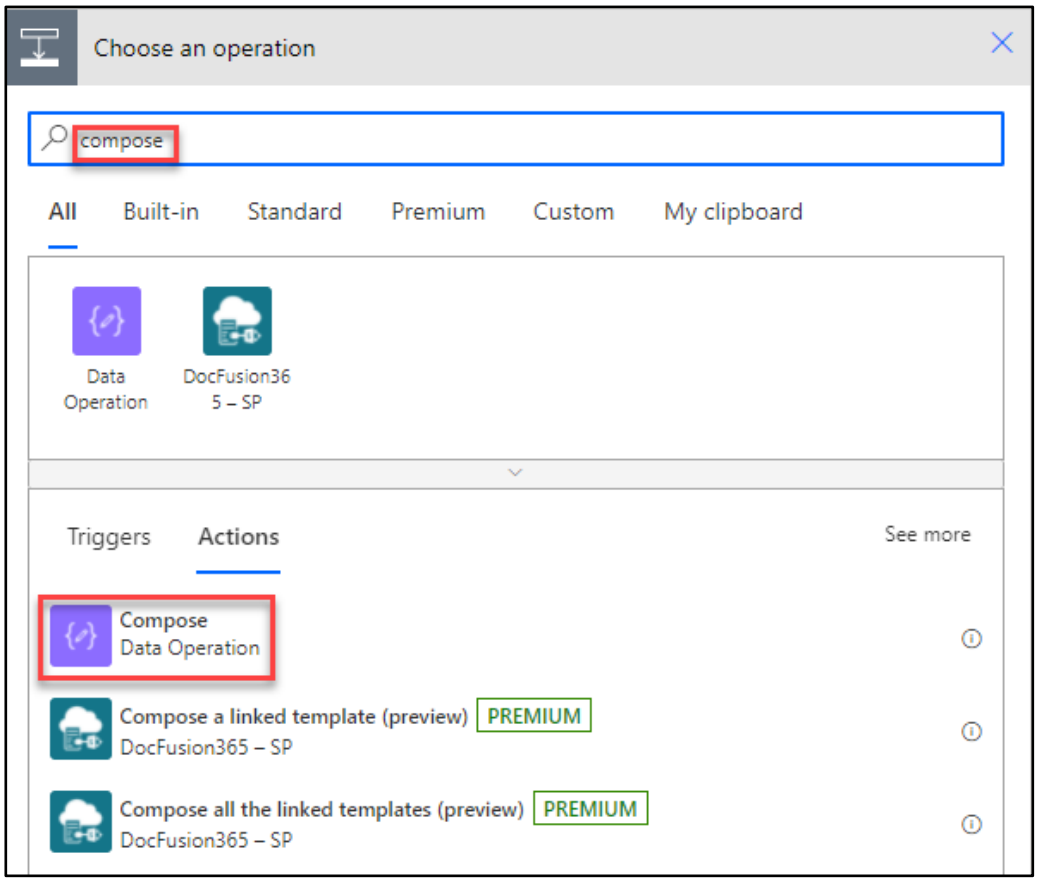

Click on **Add an action** inside the If yes box

Search for **compose**

Copyright © 2021. All rights reserved

Step 13 : Add padding to the HTML table.

Select **Compose - Data Operation**

Rename to **chtmlp**,

Select the **ellipsis (...)** for **Compose**

Select **Rename**

Type **chtmlp**

Add **Compose - HTML Padding** as a comment,

Select the **ellipsis (...)** for **chtmlp**

Select **Add a comment**

Type **Compose - HTML Padding**

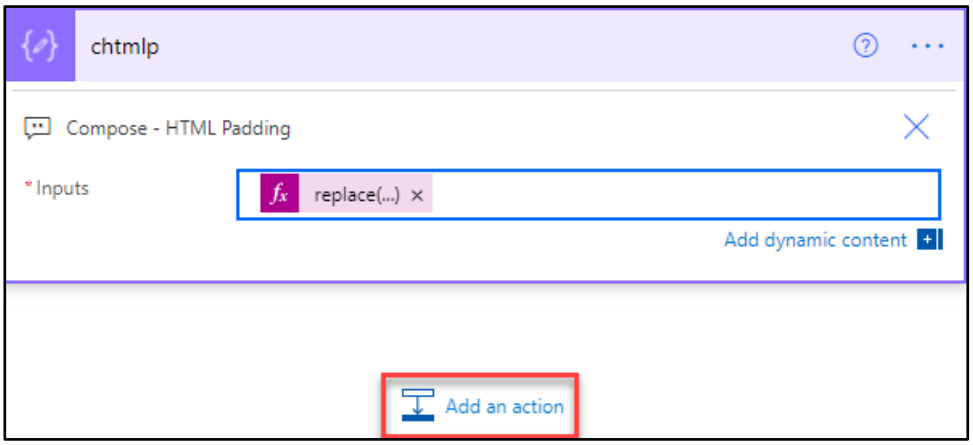

Copyright © 2021. All rights reserved

Click on the **Inputs** field

Click on **Expressions**

Type in **replace(outputs('chtmlb'),'<table>','<td style="padding:5px">')**

Click on the **OK** button

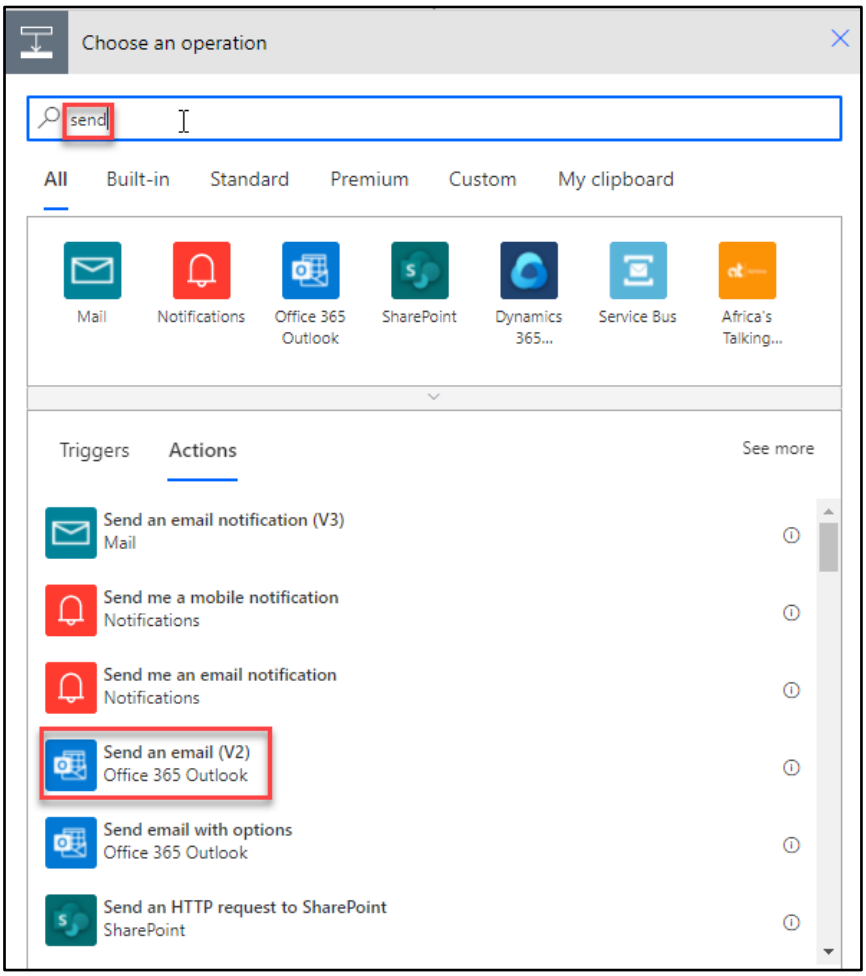

Click on **Add an action** inside the If yes box

Search for **send**

Copyright © 2021. All rights reserved

Step 14 : Email the confirmation email.

Select **Send an email (V2) - Office 365 Outlook**

Rename to **saev2**,

Select the **ellipsis (...)** for **Send an email (V2)**

Select **Rename**

Type **saev2**

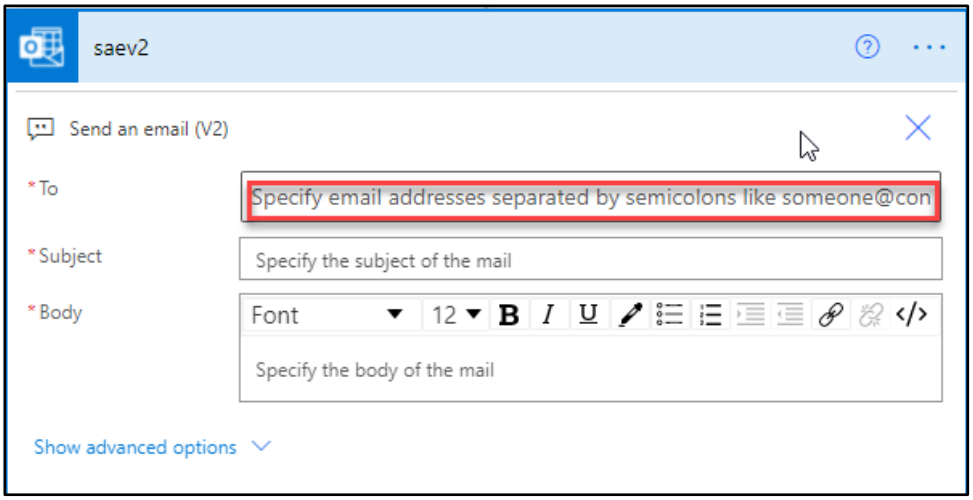

Add **Send an email (V2)** as a comment,

Select the **ellipsis (...)** for **saev2**

Select **Add a comment**

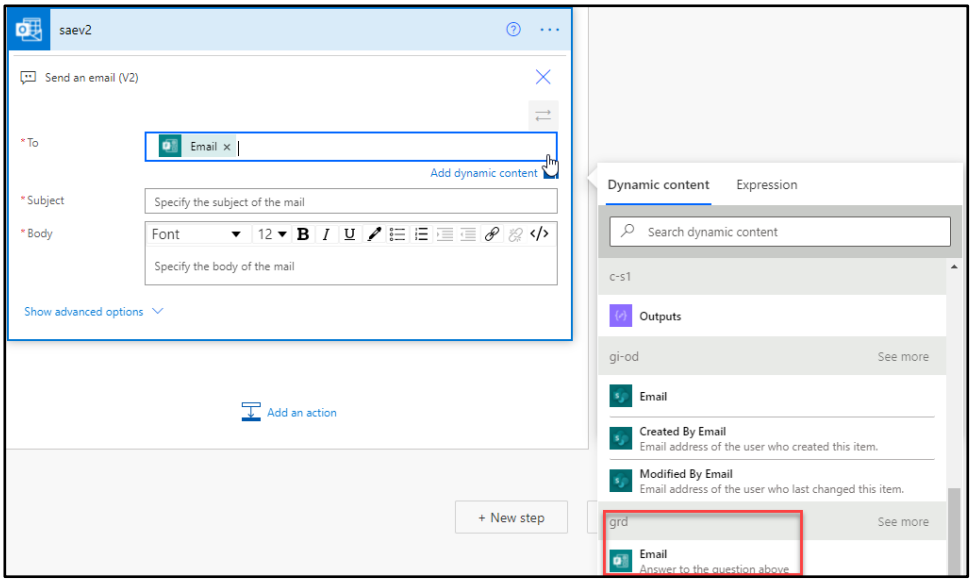

Type **Send an email (V2)**

Copyright © 2021. All rights reserved

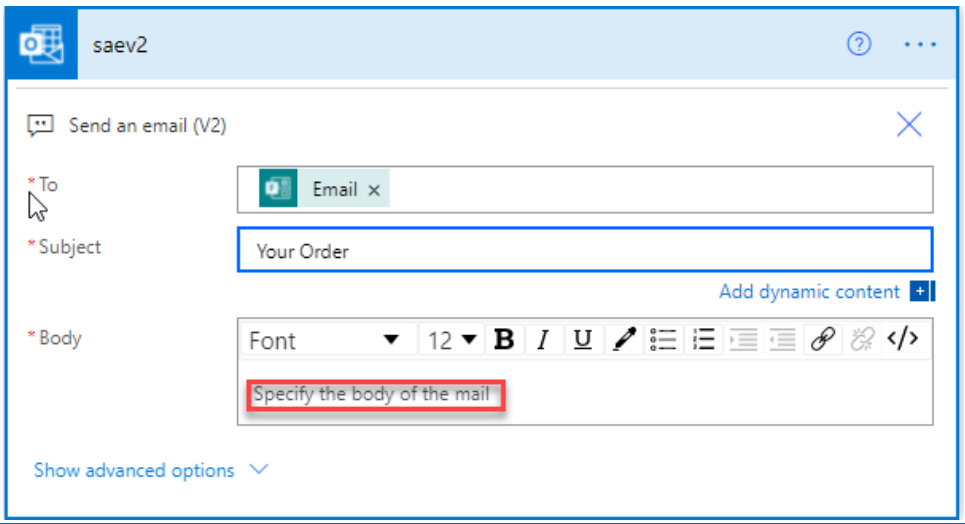

Click on the **To** field

Scroll down and select **Email** under **grd** in the Dynamic content list

Click on the **Subject** box and type **Your Order**

Copyright © 2021. All rights reserved

Click in the **Body** field

Type **Dear<space>**

Scroll down and select **Name** under **grd** in the Dynamic content list

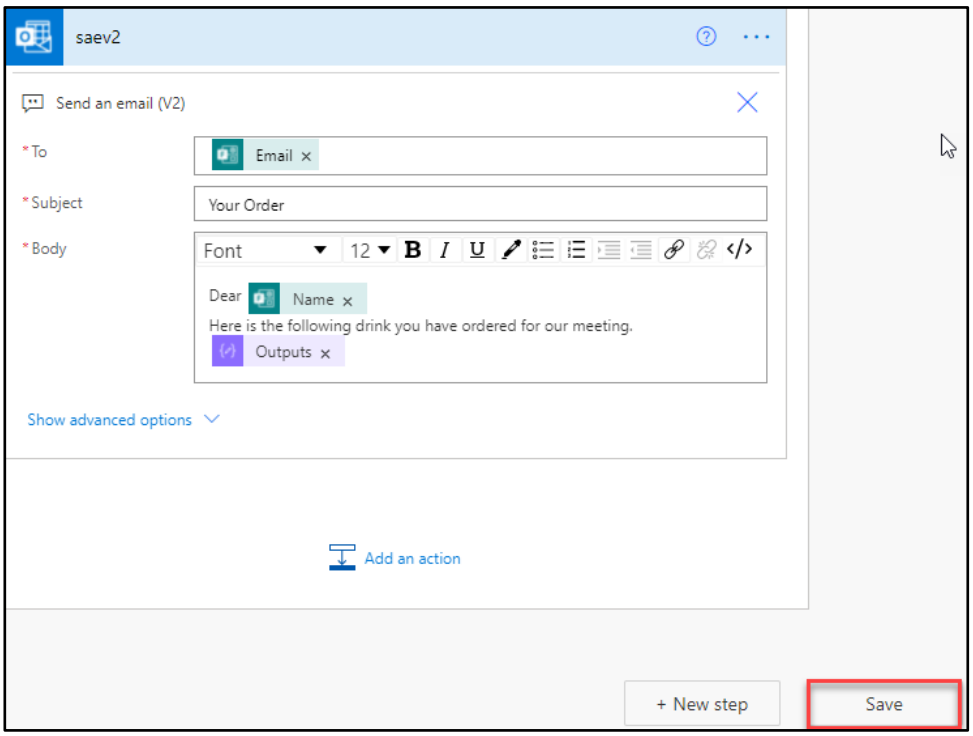

Type **<enter>**

Type **Here is the following drink you have ordered for our meeting.<enter>**

Scroll and select **Outputs** under **chtmlp** in the Dynamic content list

Note: **<space>** means hit the space bar to insert a space

and **<enter>** means hit the enter key to go to the next line

Click on the **Save** button

Copyright © 2021. All rights reserved

5 02-CreateOrderDetailsEmail

Instant Cloud Flow (Triggered Manually)

The Create Order Details Email is an instant cloud flow that is **manually** triggered when the user presses a button that is available via the Flow app on a mobile device**.**

When the button is pressed the following steps will be run.

1. Initialise a variable for all email recipients
2. Get each item from the DrinkOrders list ordered by drink, size, sugar and milk.
3. Create an array based on this data.
4. Create a HTML table populating it with the array data.
5. Format the HTML table.
6. Send an email to email addresses in OrderRecipients list with drink order detail report.

Copyright © 2021. All rights reserved

Step 1 : Create the flow.

Log into your Microsoft 365 Portal.

Goto http://flow.microsoft.com/

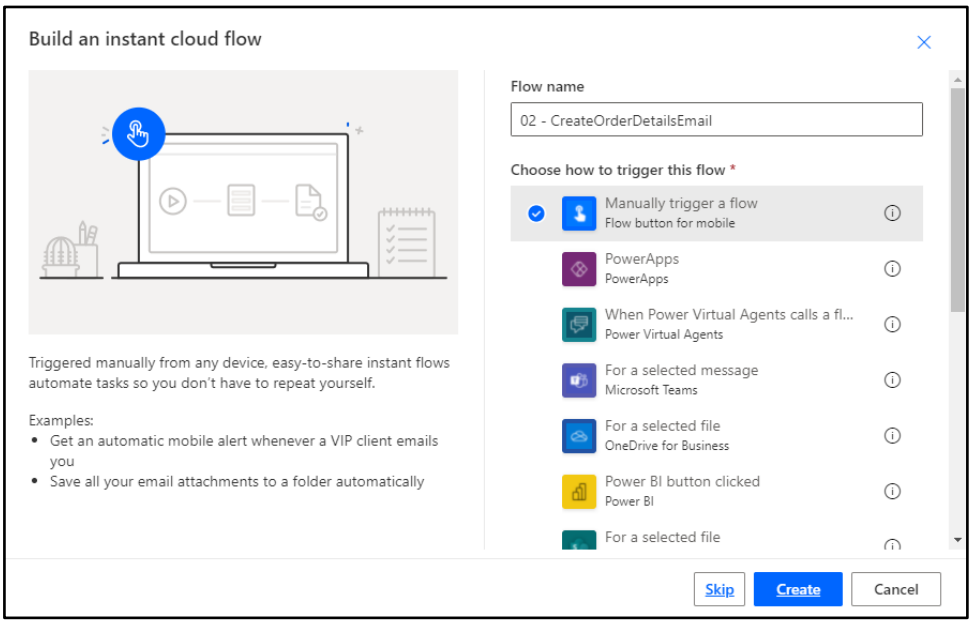

Click the **Create** button from the left menu.

Click the **Instant cloud flow** button under the Start from blank heading.

Name the flow **02 – CreateOrderDetailsEmail**

Select **Manually trigger a flow**

Press the **Create** button

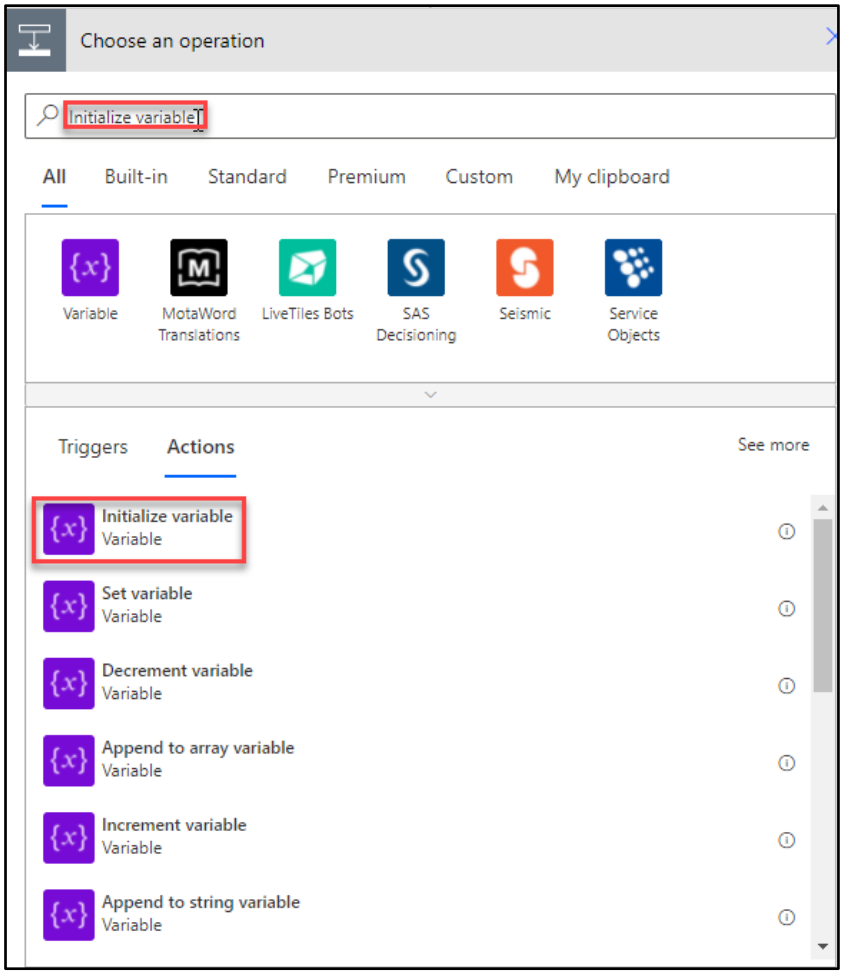

Copyright © 2021. All rights reserved

Step 2 : Setup the Flow steps

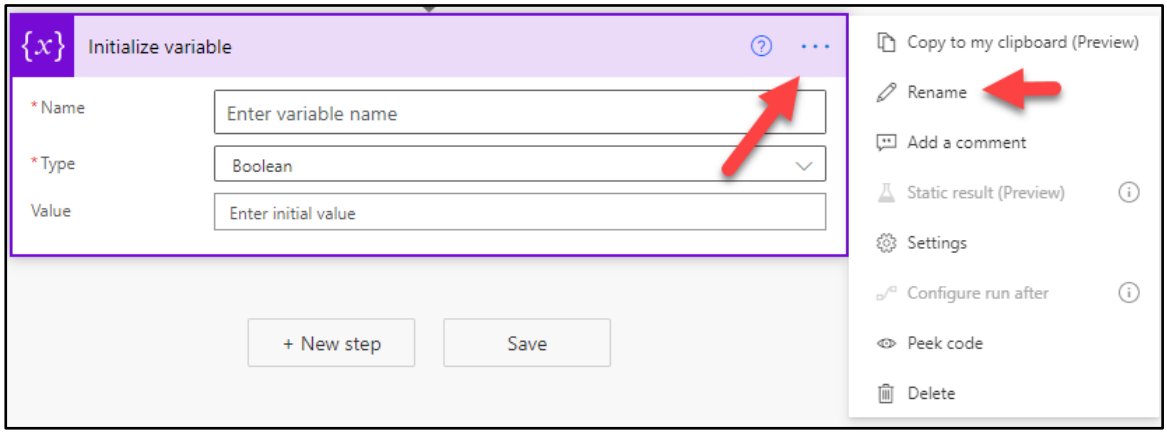

The first step is to initialise the variable for email recipients.

Press **New Step** button.

Search for **Initialize variable** in the search field and then select **Initialize variable - Variable** item in the results

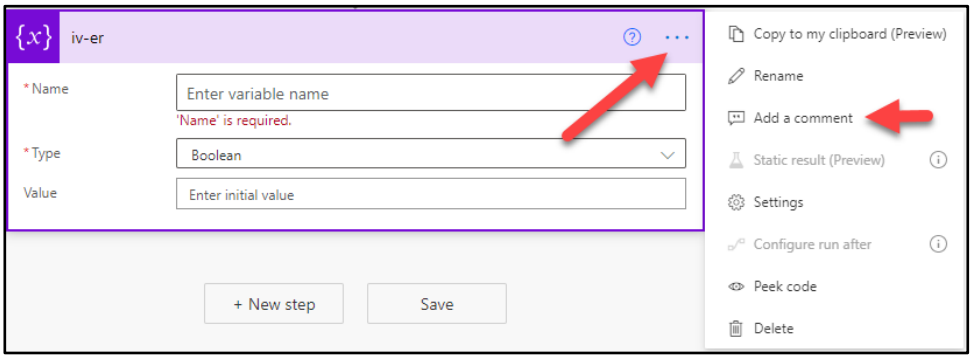

Click on the **Ellipsis …** and then click on **Rename** from the menu.

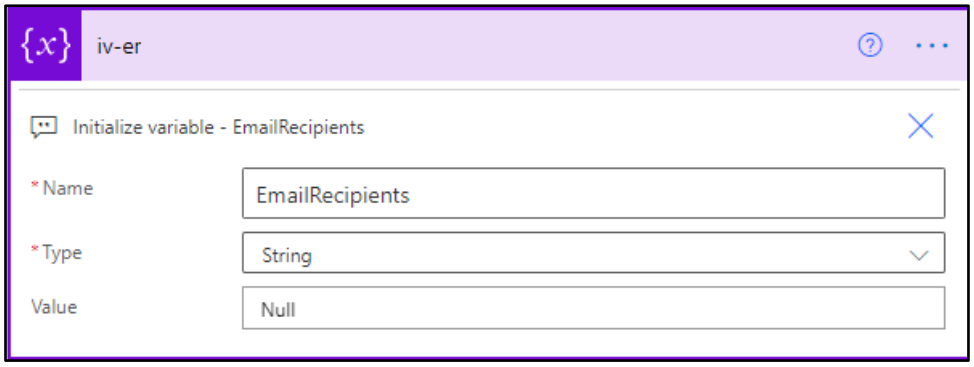

Rename **Initialize Variable** to **iv-er**

Copyright © 2021. All rights reserved

Click on the **Ellipsis …** and the click on **Add a comment** from the menu.

Type in the comment **Initialize variable – EmailRecipients**.

In the **Name** field type in **EmailRecipients**

Select **String** in the dropdown for the **Type** field

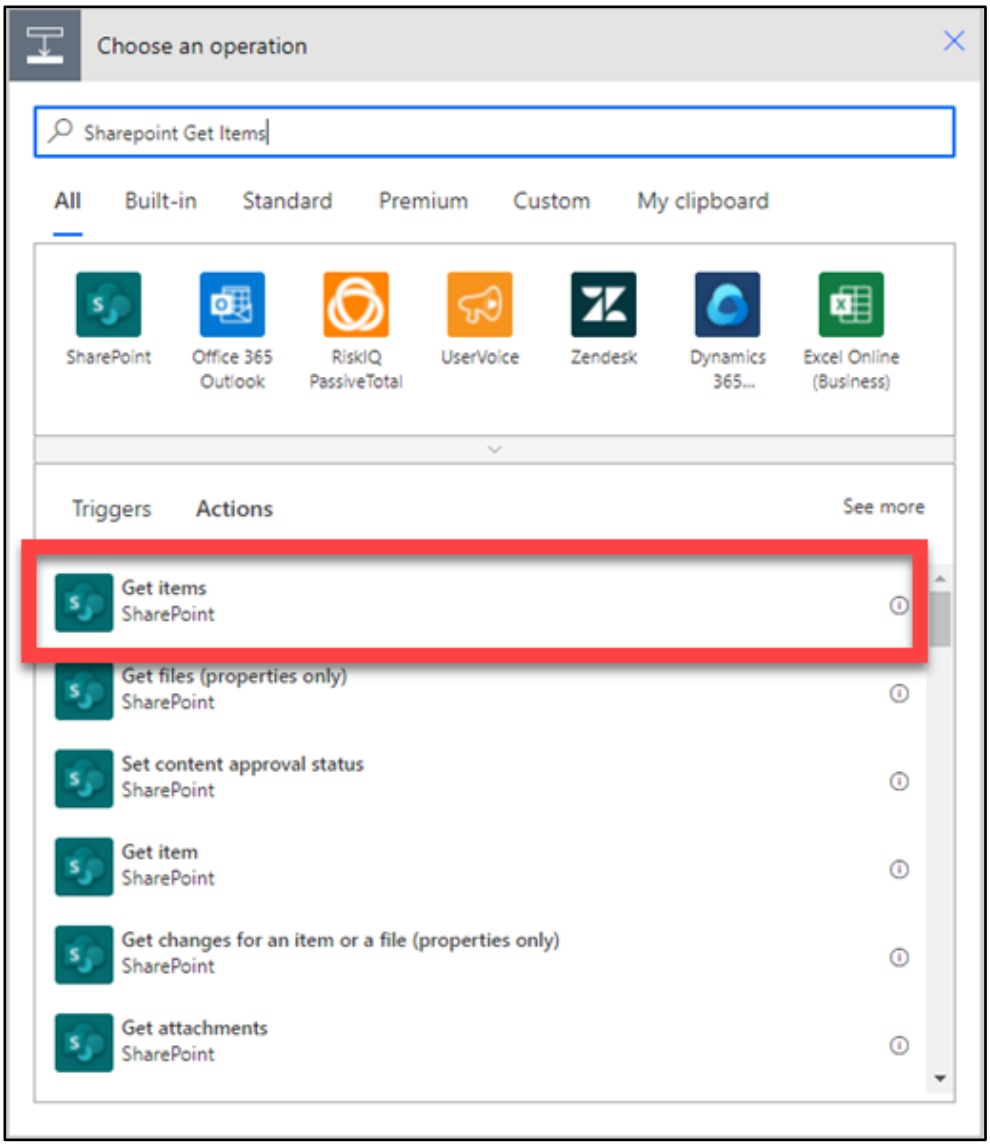

Type **Null** into the **Value** field

The next step is retrieving the data from the **DrinkOrders** List.

Press **New Step** button to add a step to the process.

Search for **SharePoint Get Items (SharePoint)** by typing **SharePoint** in the search field and finding the item within the list. Click on the **Get items - SharePoint** item.

Copyright © 2021. All rights reserved

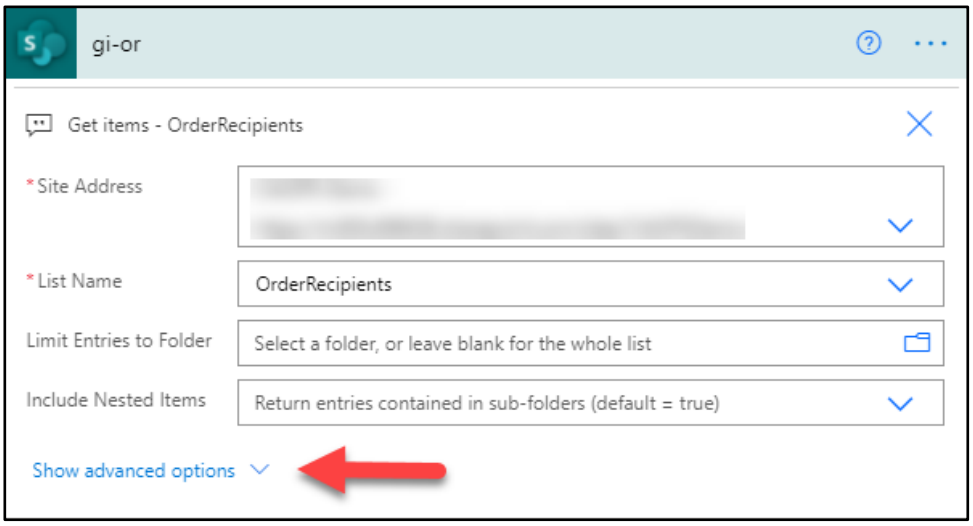

Click on the **ellipsis** and select **Rename**. Rename **Get Items** to **gi-or.**

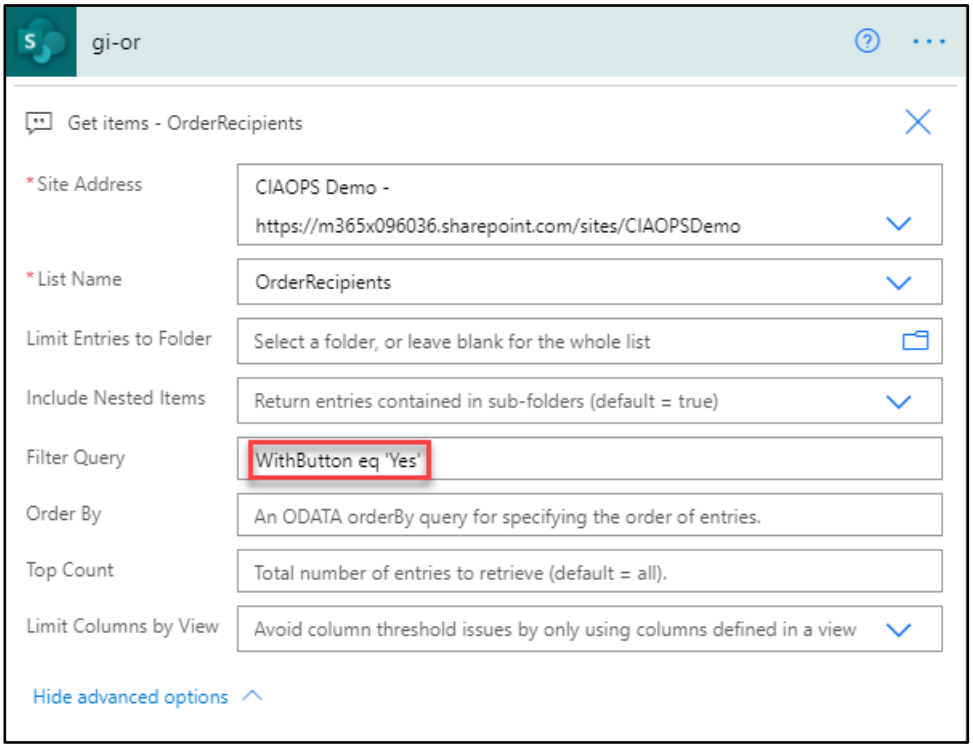

Click on the **ellipsis** and select **Add a comment**. Type in **Get items – OrderRecipients** in the **comment** field.

Choose the SharePoint **Site Address** and the **List Name OrderRecipients** from the respective drop-down lists

Copyright © 2021. All rights reserved

Click on the **Show advanced options** dropdown.

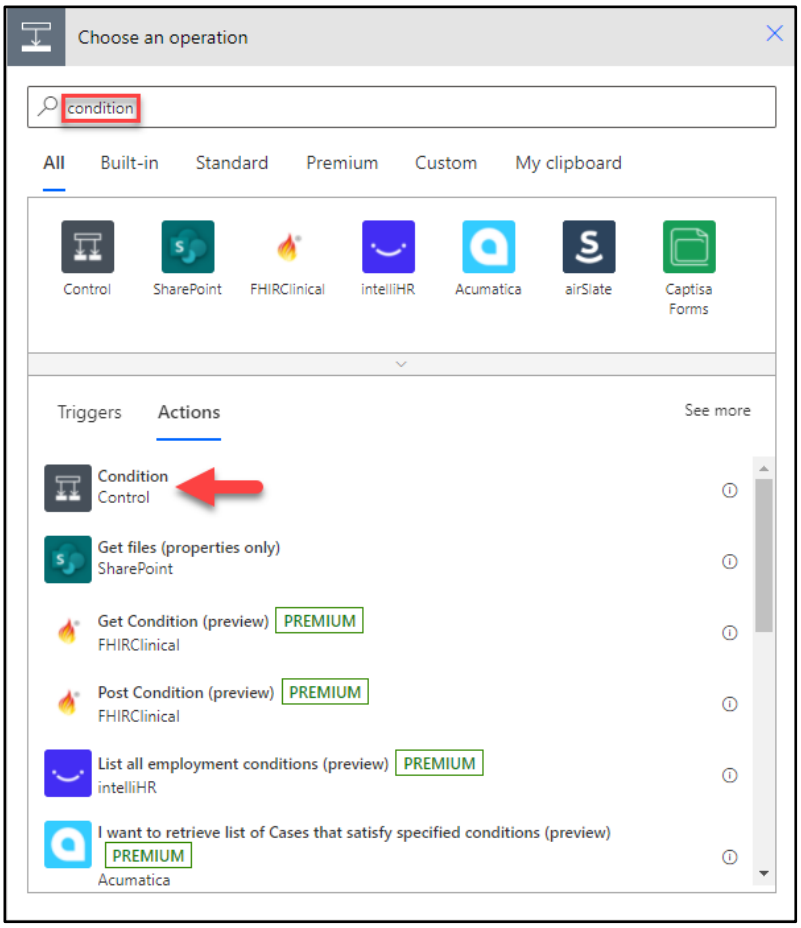

Input the following into the **Filter Query** field: **WithButton eq 'Yes'**

The next step is to get the list of Email Recipients

Click on **New Step**.

Search for **condition** and then select **Condition - Control**.

Copyright © 2021. All rights reserved

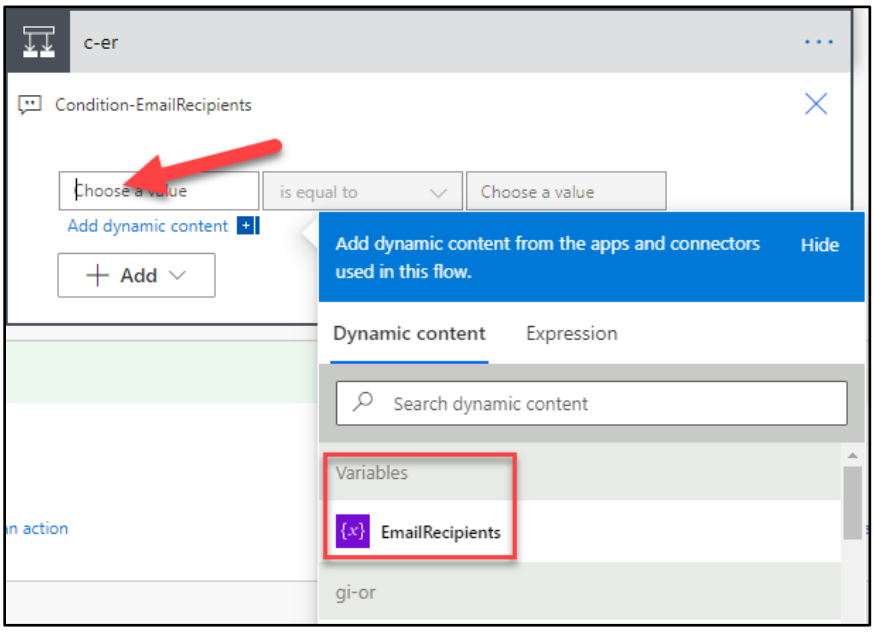

Click on the **ellipsis …** and then **Rename**. Rename **Condition** to **c-er**.

Click on the **ellipsis …** and then **Add a comment**. Make the comment **Condition – EmailRecipients**.

Conclusion

Now, at the completion of this process we hope you have been able to get everything working and it provides benefit to you. It is also hoped that by completing this 'build' process you have become more aware of the capabilities that the Microsoft Power Platform provides.

Feedback

If you have any feedback on this process or ways that you believe it can be improved please do not hesitate to email director@ciaops.com with your ideas. All feedback is welcome.
