Demo

What are agents?

Digital labor that can execute business processes

Agents use AI to automate and execute business processes, working alongside or on behalf of a person, team or organization

An agent is role focused AI

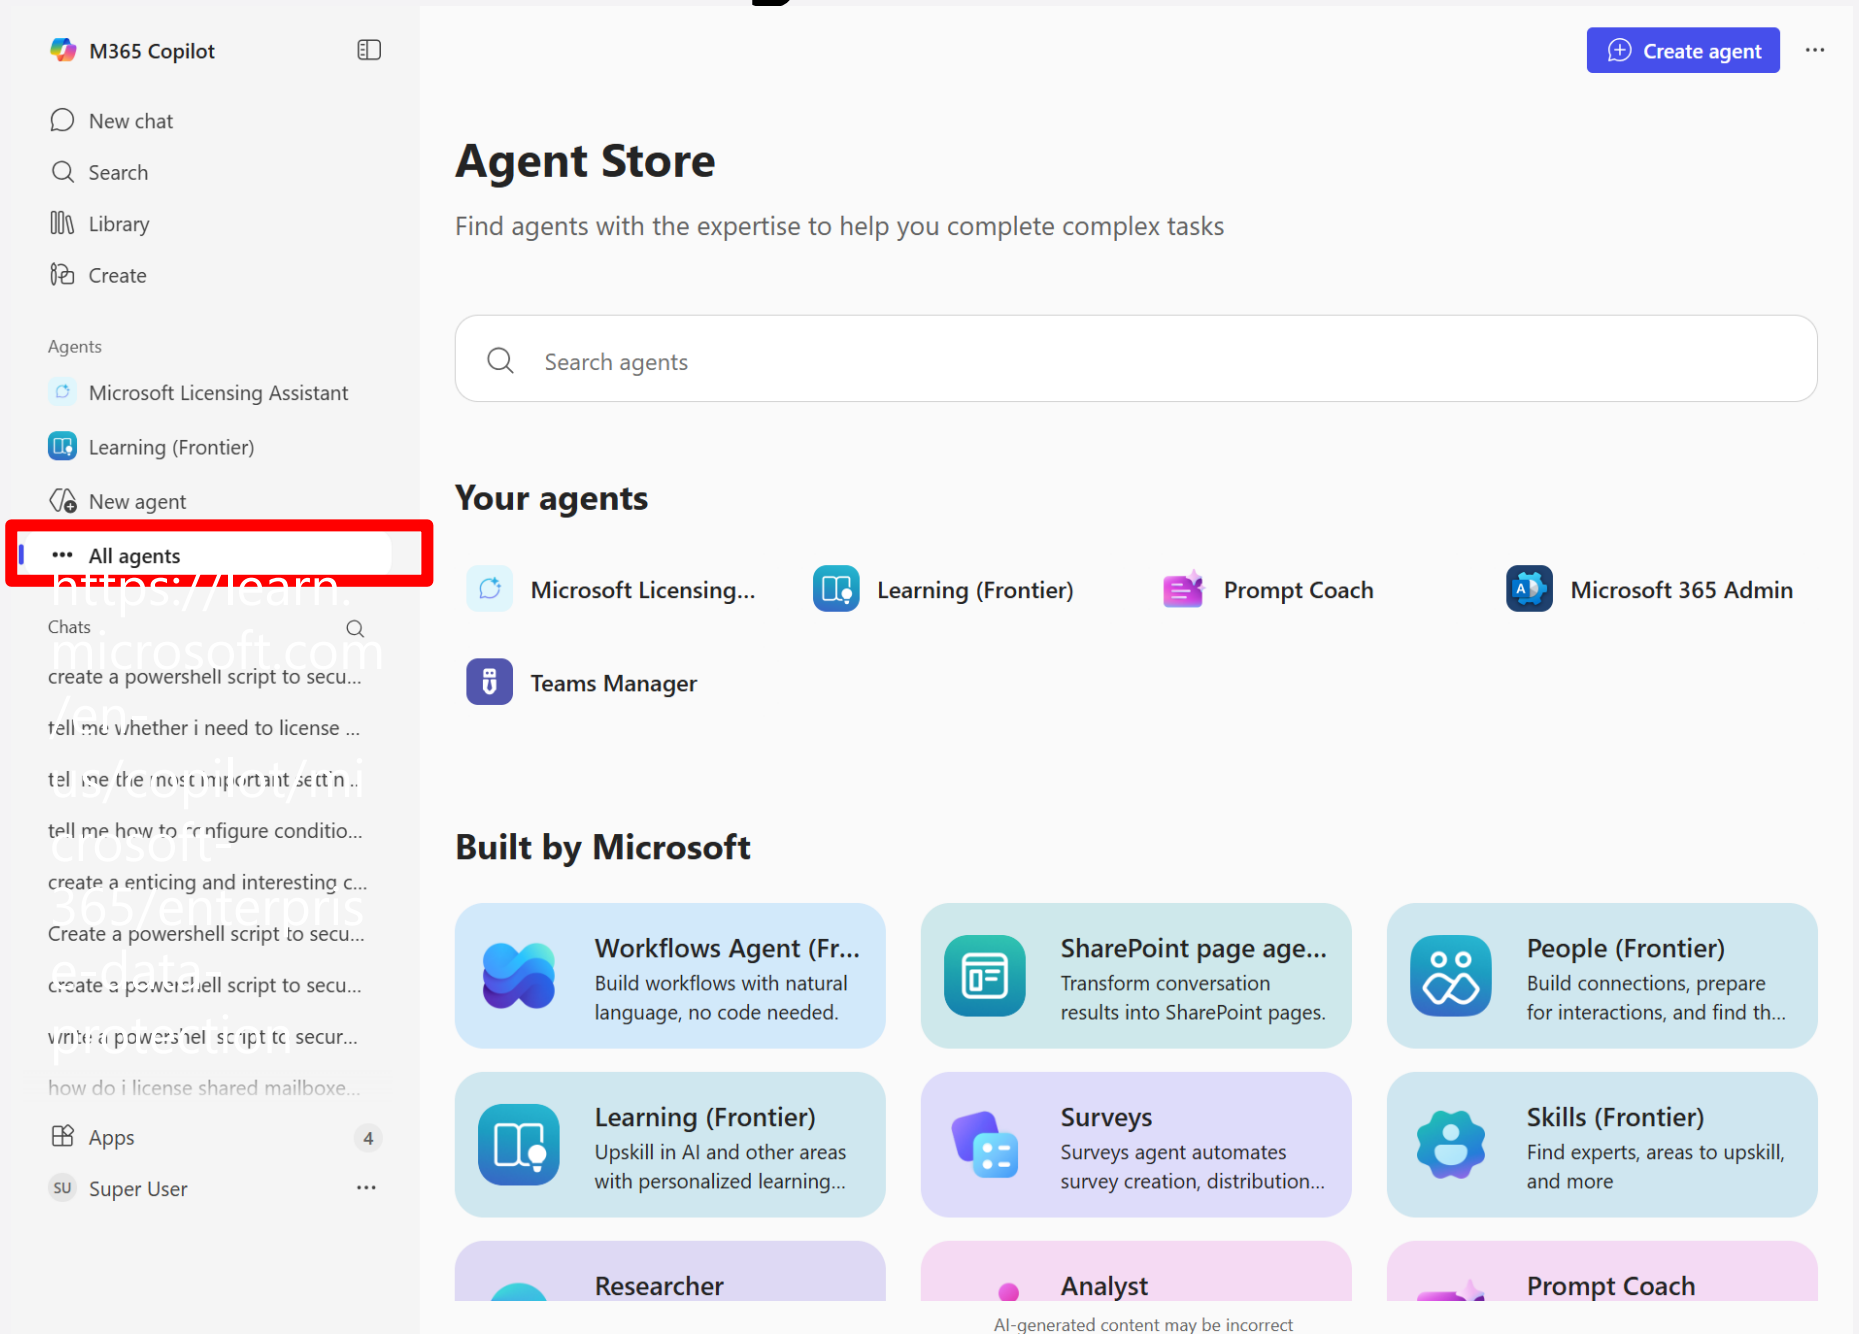

Persona – *You are a M365 technical expert*

Data set – *Microsoft Learn*

Instructions – *Provide step by step instructions*

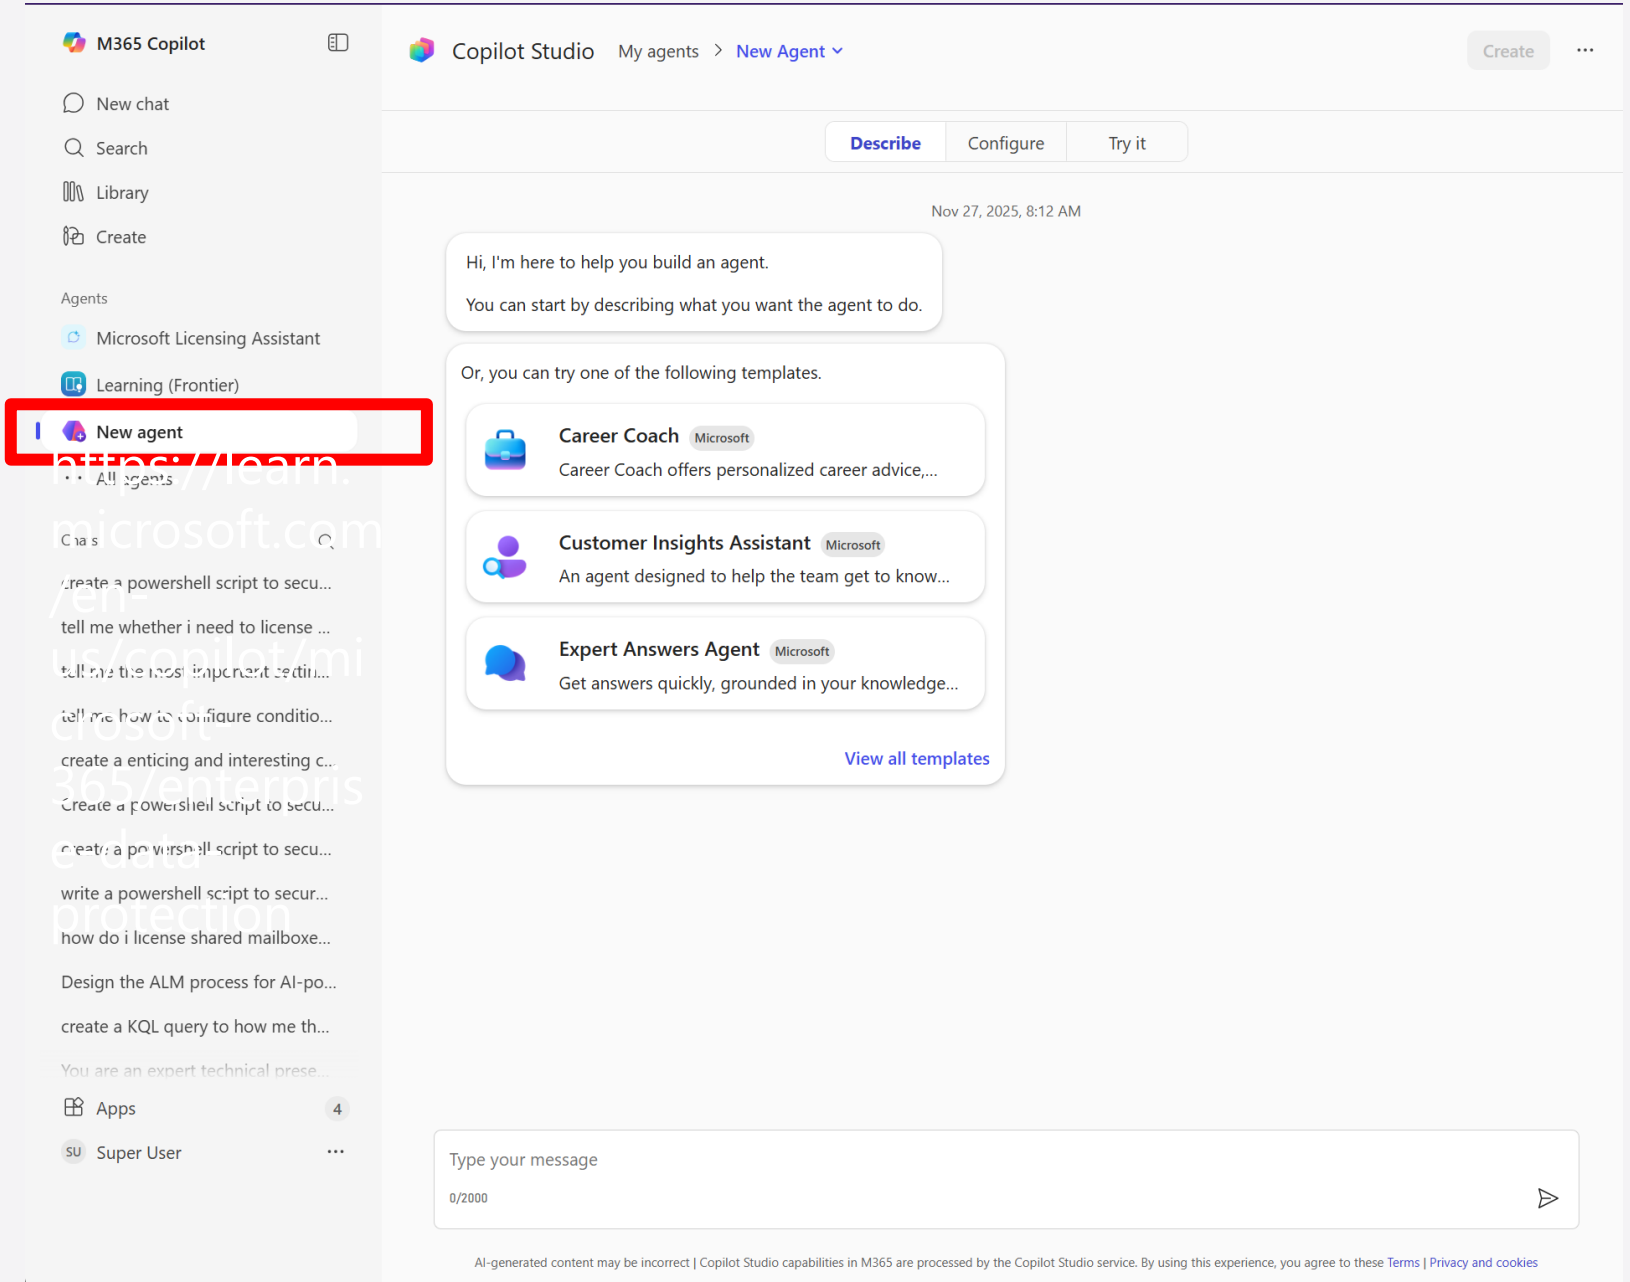

Output – *Always provide a check list*

Demo

Word, Excel, and PowerPoint agents

Turn ideas into polished documents, spreadsheets, and presentations directly in chat

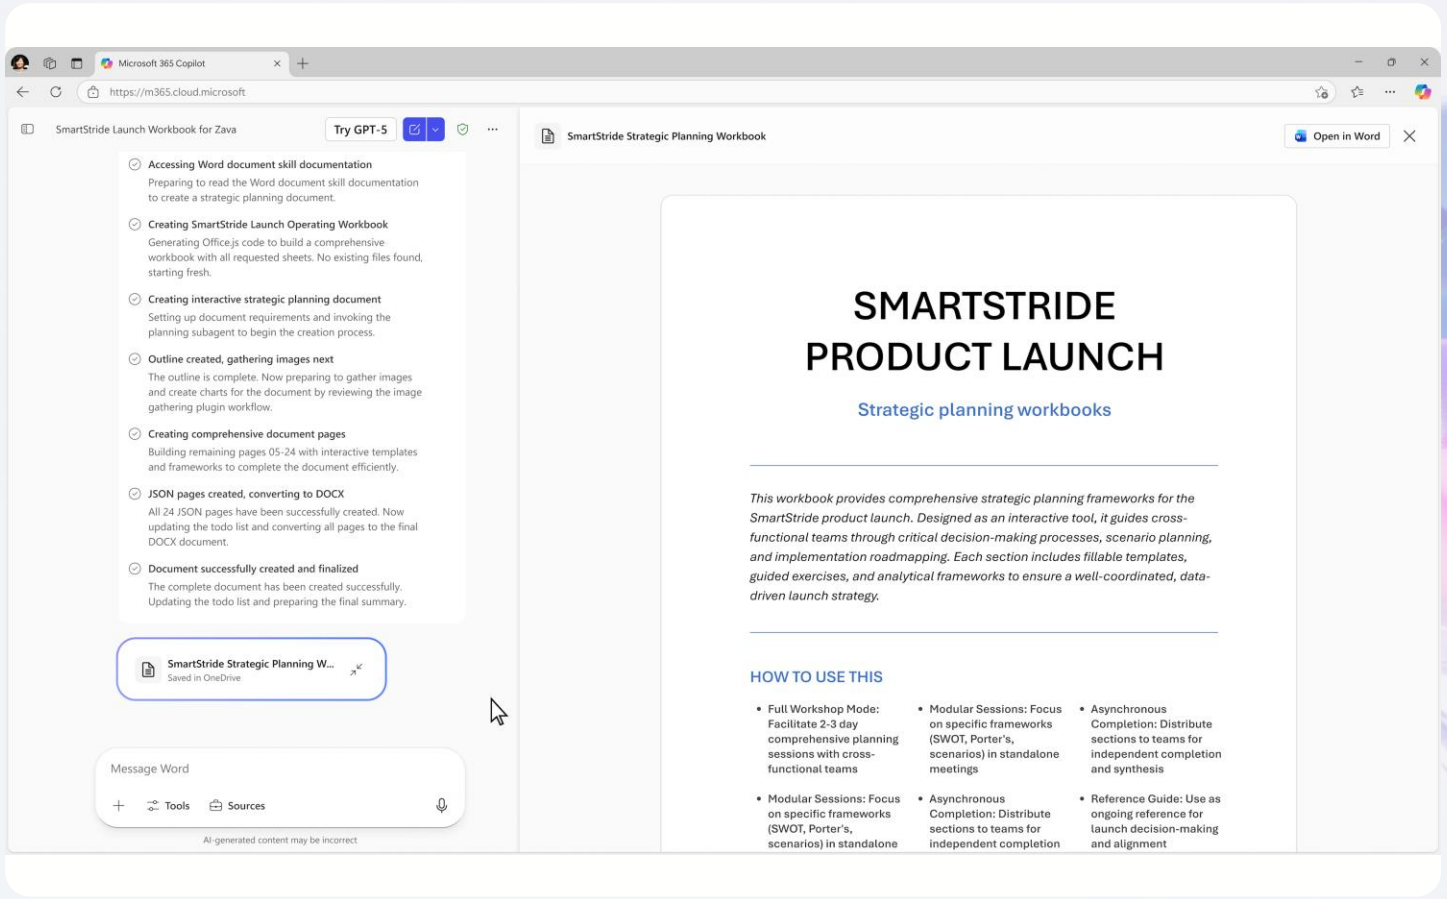

Works with you to clarify your request through targeted questions about focus, theme, audience, and file length.

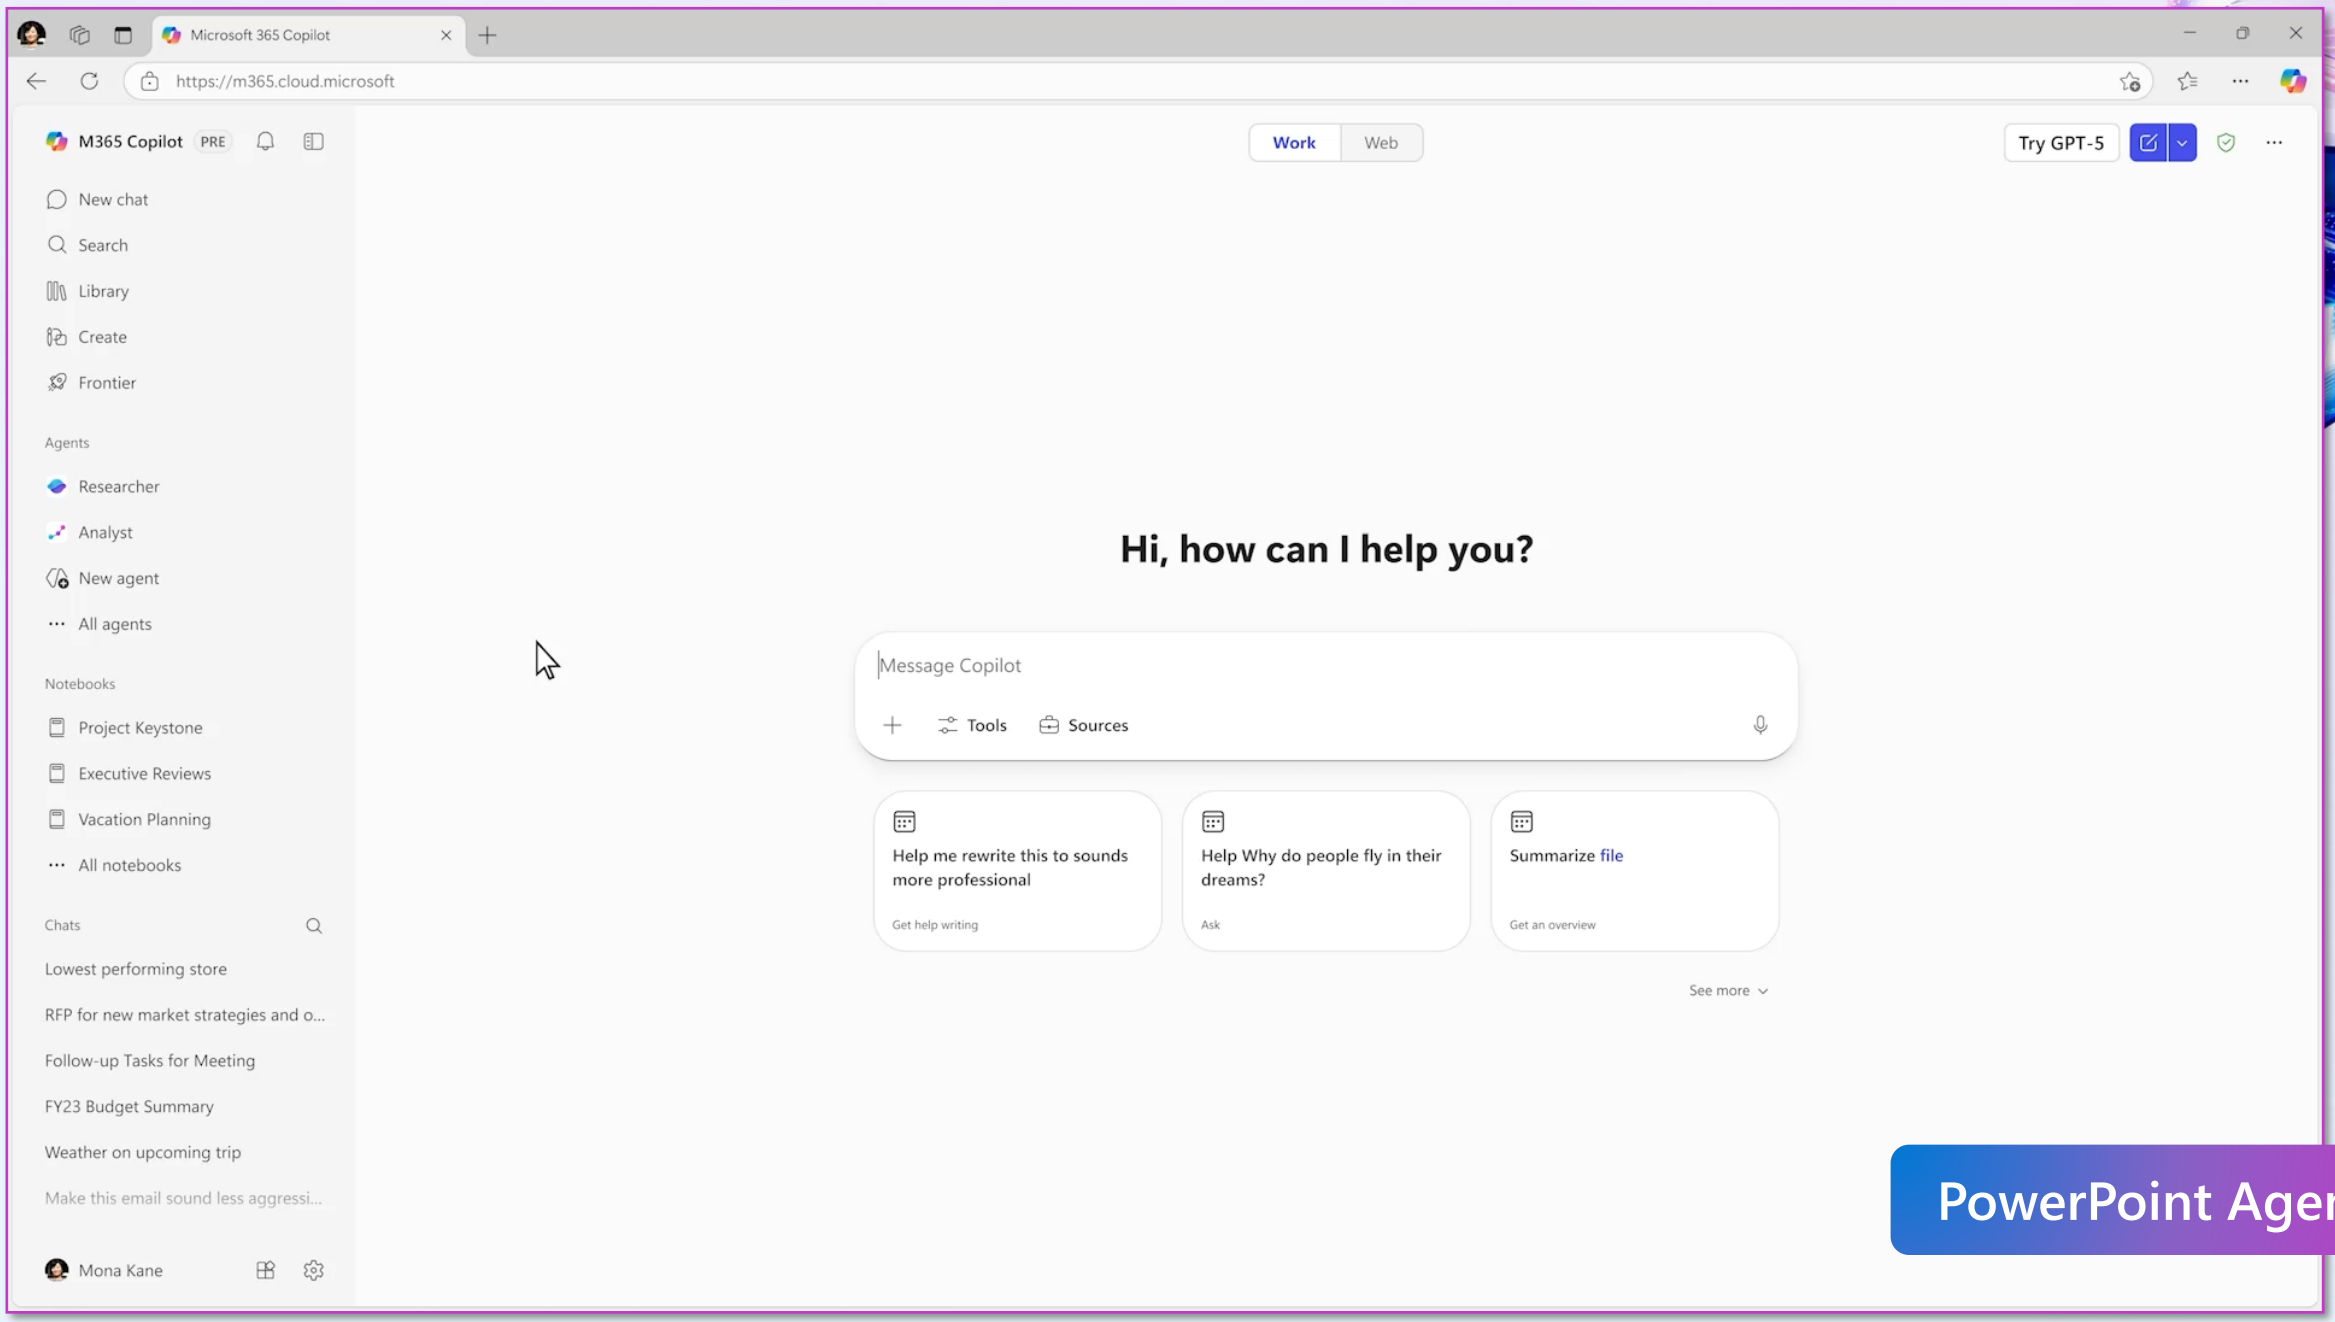

Draws from both web and work* sources to research, analyze and create high-quality content.

Let's you refine results in Chat or open in the Word, Excel, or PowerPoint apps to edit and collaborate further.

Rollout start to Frontier Program November 2025

*Excel Agent can currently only use web sources

PowerPoint Agent

Agent Mode

Make a one-page brief from files, chats, and emails

Build a model with tables, formulas, and charts

Create a deck from emails, meetings, and images

Tighten a draft without breaking the format

Build a sensitivity analysis with adjustable assumptions

Fix formulas and clean up formatting

Refresh an old deck to align with brand and layout

Update the monthly report with the latest key decisions

Add fresh web data to keep workbooks relevant

Update existing slides from a Word brief and Excel data

Microsoft 365 Copilot

One app. One experience. One AI advantage

Search

- AI overviews
- Glance cards
- 1st and 3rd party connectors

Chat

- Meeting AI highlights
- Memory and personalization
- Image gen and editing
- Voice in M365 Copilot
- Content/codegen with Pages

Agents

- Model choice with Researcher
- Surveys agent

Notebooks

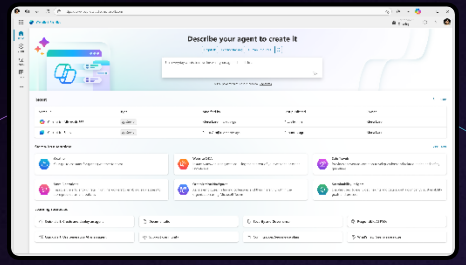

- Real-time collaboration
- Proactive suggestions
- Audio overviews

Create

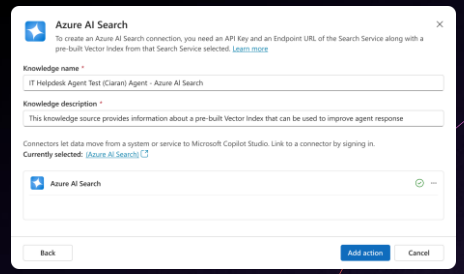

- Visual assets with brand kit
- Sora 2 video creation

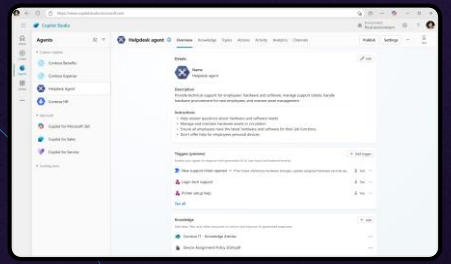

Powered by Work IQ

Build agents and workflows
by simply describing what you want

Integrations
Integrate with Azure Foundry

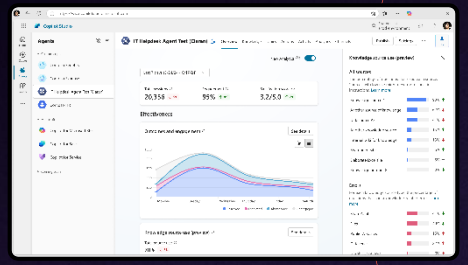

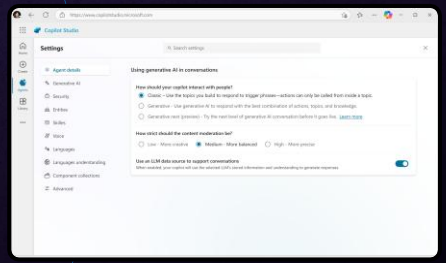

Trigger your agents and workflows interactively through a chat, or autonomously through events

Copilot Studio

Create, manage and publish all from one E2E tool and SaaS service

Monitor and Improve
with rich analytics, observability, and custom evaluations

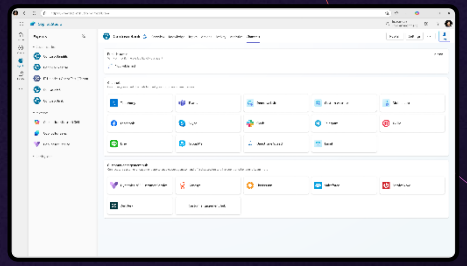

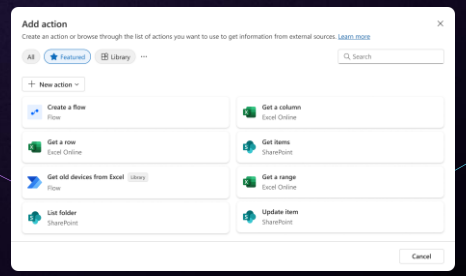

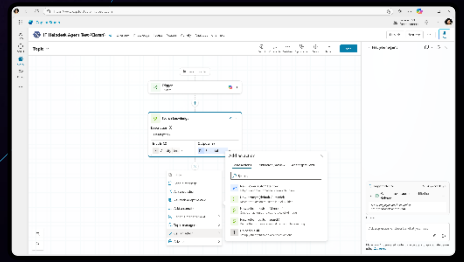

Chat over your knowledge
Provide generative answers **over** your knowledge – wherever it is - in M365, in Dataverse, in 3rd party systems and more

Publish to **multiple channels, and go live instantly**

Govern and manage **your agents with sophisticated capabilities**

Use workflows
Create your own agent workflows and deterministic processes – allow your agents to use them and (soon) allow workflows to call your agents

Orchestrate over multiple agents and tools such as APIs, PP connectors, MCP servers, and powerful built-in tools such as Computer Use Agents

Each platform is tuned to best meet your specific needs

Copilot Studio

Business teams, IT admins, and pro-makers who want to build custom agents and workflows—without full code.

- Low-code
- Fully managed environments
- Out-of-the-box DevOps with solutions

Microsoft Foundry

Professional developers and technical teams who demand full control, deep customization, and advanced DevOps.

- Pro-code
- Full control over Azure resources
- Custom CI/CD with GitHub

Both can build sophisticated agents: One is SaaS, one PaaS
